Disclaimer

The Investment Project Catalogue has been prepared by the KSE Institute in cooperation with the Ministry of Economy of Ukraine as an informational publication that highlights concrete investment opportunities across key sectors of the Ukrainian economy. This document is designed to support international and domestic investors, development partners, financial institutions, and project developers in identifying promising initiatives aligned with Ukraine's recovery and growth priorities.

The data and analysis presented herein are based on inputs received from project initiators, public institutions, and open-source information available at the time of preparation. While every effort has been made to verify the accuracy, relevance, and completeness of the materials included, the authors make no warranties or representations regarding their absolute reliability. Readers are encouraged to exercise their own due diligence and consult relevant professionals before making any investment decisions.

The views expressed in this publication reflect the analysis and judgments of the KSE Institute and the Ministry of Economy of Ukraine at the time of publication and may be subject to change. The KSE Institute, the Ministry of Economy, their partners, staff, and affiliates shall not be held liable for any losses, damages, or decisions made based on the content of this catalogue. Reproduction or distribution of this document, in whole or in part, without prior written consent of the KSE Institute and the Ministry of Economy of Ukraine is prohibited. Proper attribution is required when citing any part of this publication.

Acknowledgment

We would like to express our sincere appreciation to all the institutions, experts, and project teams who contributed to the creation of this Investment Project Catalogue. This publication would not have been possible without the active engagement of partners across government, business, finance, and international development institutions.

We are particularly grateful to the Ministry of Economy of Ukraine for its strategic leadership, and to regional administrations, sectoral ministries, industry associations, and private sector stakeholders who submitted investment projects, shared insights, and provided validation support throughout the process.

Special thanks go to the consulting firms – Deloitte, EY, KPMG, BDO, PwC, UVCA, and other international consultants – for their valuable contributions in providing feedback, sharing methodological expertise, and supporting the refinement of project preparation frameworks.

This catalogue reflects a shared effort to mobilise private capital and international partnerships for Ukraine's economic recovery. We thank all contributors for their trust, professionalism, and commitment to Ukraine's future. Your support is vital in presenting Ukraine as a competitive and investable country at a time when global capital is seeking purpose and impact.

We are ready to fight for every investor

Ukraine is rebuilding under the most challenging circumstances of our modern history. But even amid war, our focus is firmly on the future. We are committed not only to recovery but to transformation – building a competitive, sustainable, and investor-driven economy aligned with European standards and global markets.

The Government of Ukraine sees the private sector as the engine of this transformation. Private capital, entrepreneurship, and global partnerships will drive the next generation of growth – from critical infrastructure and energy to manufacturing, technology, and defence innovation. The scale of investment needed is significant, but so is our determination to create the right conditions to unlock it.

This Investment Catalogue was developed as a practical tool to help partners navigate Ukraine's evolving investment landscape. It features a curated pipeline of projects and funds across key sectors – each vetted for economic viability and aligned with our national priorities. But beyond the projects listed here, it reflects something more: our commitment to engage, to listen, and to improve.

We understand that investment depends not only on opportunity, but on confidence. That is why the Government of Ukraine is fully committed to doing what is needed – improving policies, strengthening the regulatory environment, expanding investment incentives, and working with our partners to design new de-risking and financing instruments. Whether through war-risk insurance, concessional capital, sovereign guarantees, or targeted reforms, we are focused on enabling capital to flow – and to stay.

This is a shared effort. Our European and G7 partners, development finance institutions, and private investors all play an essential role. Together, we are building the institutional and financial infrastructure to support long-term, scalable investment in Ukraine.

We invite you to be part of this effort. Not only to invest in projects, but to help shape a new economic model for Ukraine – one built on transparency, resilience, and opportunity.

Ukraine is open for business, and the Government and Ukrainian partners stands ready to support you – from first contact to final investment.

Yulia Svyrydenko
First Deputy Prime Minister of Ukraine
Minister of Economy of Ukraine

Introduction

Ukraine's economy continues to demonstrate resilience and recovery, even amid the challenges of full-scale war. Following a sharp contraction in 2022 (–28.8%), GDP rebounded by +5.5% in 2023 and +2.9% in 2024, with projected growth of +2.8% in 2025[1]. These results reflect the strength of Ukraine's private sector and the government's commitment—supported by international partners—to advance structural reforms, restore investor confidence, and prepare for long-term integration into the European Union.

GDP IN 2022-2025

The scale of the recovery effort is substantial. According to the **Rapid Damage and Needs Assessment (RDNA4)**, prepared by the Government of Ukraine, the World Bank, the EU, and the UN,

total estimated damages and losses resulting from russia's full-scale invasion amount to

$523.6 bn[2]

However, **Ukraine's reconstruction agenda is not only focused on rebuilding, but also on advancing a modern, future-oriented economy**—anchored in the green transition, digitalisation, and integration into the EU Single Market. Furthermore, **the private sector will be the cornerstone of this effort**. The Ukrainian government aims to unlock its potential by **ensuring predictable investment conditions**, strong protection of property rights, deregulation, privatisation, open markets, and meaningful incentives.

To support this agenda, the Ministry of Economy of Ukraine and the Kyiv School of Economics (KSE) have jointly prepared the **Ukraine Investment Catalogue**. This document serves as a practical resource for investors, policymakers, development partners, financial institutions, and project developers.

The catalogue includes **250 investment cases**, with total estimated financing needs exceeding **$40 billion**. This includes **244 investment projects** across **11 strategic sectors**, covering both public and private sector initiatives, and a dedicated chapter on **Private Equity,** highlighting **6 funds** currently raising capital to invest across sectors in **scalable Ukrainian businesses.**
(Please see table 1 for the list of the investment areas and their description).

The projects and funds featured in this catalogue have been selected from a broader pool of over 1,500 submissions collected since 2023. While not an exhaustive list of all viable opportunities in Ukraine, the catalogue serves as a representative sample of investment-ready projects and fund vehicles—illustrating the diversity, scale, and sectoral breadth of Ukraine's evolving investment landscape.

Each project was evaluated based on the following criteria:

- Verified positive net economic return (NPV > 0);
- Minimum investment threshold of **$1 million** (no upper limit);
- Location in government-controlled territory;
- Full compliance with Ukraine's **No Russia Policy** and exclusion of **sanctioned individuals or entities**.

Projects vary by scale, stage of development, and sponsor type—from early-stage ventures to **shovel-ready infrastructure. Many are designed to leverage co-financing, guarantees, or blended capital from international and bilateral partners.**

To improve investor confidence and reduce barriers to entry, Ukraine—supported by the EU, G7, and global IFIs—is **implementing** a comprehensive suite of policy and financial tools:

- The **Ukraine Investment Framework (UIF)** under the EU's €50 billion Ukraine Facility, offering €9.3 billion in guarantees and concessional finance;
- **Financing programmes from partner countries and DFIs;**
- **De-risking instruments from export credit agencies and international financial institutions;**
- **War-risk insurance mechanisms** co-developed with **MIGA**, **DFC**, and global reinsurers;
- **Tax and customs incentives**, fast-track permitting, PPP frameworks, and access to pre-zoned industrial land;
- Specialised regimes such as **Diia.City** for digital companies and **industrial park** platforms for manufacturing investors.

Together, these mechanisms are designed to **reduce risk premiums, improve project bankability, and catalyse institutional and strategic capital flows**.

Importantly, these short-term enablers are reinforced by a set of deeper structural shifts that underpin Ukraine's long-term investment case:

1. **EU integration and regulatory harmonisation**, unlocking access to the Single Market;
2. **Global supply chain realignment**, positioning Ukraine as a nearshoring destination for Europe;

[1] Ukraine Macroeconomics Handbook by KSE Institute.
[2] The World Bank - RAPID DAMAGE AND NEEDS ASSESSMENT (RDNA4), February 2025.

Decarbonisation and green transition, driving demand for energy, infrastructure, and industrial solutions;

3. **Digital and defense innovation**, with Ukraine emerging as a leader in scalable dual-use technologies;
4. **Reform-oriented governance**, improving transparency, legal certainty, and investor protection.

As Ukraine rebuilds, the private sector will play a central role in shaping a resilient, competitive, and future-ready economy. This catalogue offers a clear entry point for investors seeking to engage in Ukraine's transformation.
We welcome your partnership in investing in Ukraine's future.

All featured projects will also be available on the national Investment Portal:
www.investportalua.com

Table 1: Investment projects portfolio

№	Investment Areas	Number of Projects in Catalogue	Required Project Finance in Catalogue, $ bln	Projects Categories
1	Energy	75	26.9	Wind generation; Solar generation; Hydroenergy; Biofuel and biomethane; Energy storage systems; Nuclear power; Peaking power including cogeneration; Electricity distribution and transmission; Oil and gas; Hydrogen
2	Industrial Manufacturing	39	1.2	Automotive and public transport; Railway machinery; Engines and turbines; Tube production; Electronics and optics; Specialised machinery; Chemical industry; Packaging industry; Textile manufacturing; Wood products; Paper products
3	Agrifood	30	1.4	Crop production; Livestock farming; Dairy cattle breeding; Infrastructure; Deep processing; Oilseeds processing; Chemical Industry
4	Transport and Logistics	18	1.6	Railway infrastructure; Maritime infrastructure; Export logistics; Renewal of rolling stock and river cargo fleet; Intermodal transportation; Development warehouse infrastructure
5	ICT and digital	18	0.8	Infrastructure projects in information technologies; Digitalisation of the economy; Innovation development; Products and services
6	Healthcare	16	0.5	Pharmaceutical production; Nuclear medicine; Pharmaceutical supply chain; New medical facilities through private investment and public-private partnerships (PPPs)
7	Defence and Dual-Use	13	0.2	Unmanned Aerial Vehicles; Communication systems; AI-driven software; Drone detection system; Unmanned Ground Vehicles; Counter-drone systems; Demining systems
8	Critical Materials	12	2.4	Graphite; Titanium; Beryllium; Lithium; Uranium; Polymetallic
9	Construction Materials and Structures	11	0.5	Building Materials and Structures; Float Glass Factories; Insulation Materials
10	Real Estate and Housing	9	0.4	PropTech; Commercial real estate; Retail property and leasing; Cultural heritage; Industrial parks
11	Green Steel	3	2.1	Green steel products; DR-grade pellets; Thickening for enrichment waste
12	Private Equity and Investment Funds	6	2.0[3]	Funds focusing on high-impact sectors (technology, logistics, agrifood, manufacturing, real estate and energy), post-war reconstruction and innovation-driven businesses
	Total	250	40.0

WPP	Wind Power Plant
WPU	Wind Parks of Ukraine
WTG	Wind Turbine Generator
μm	Micrometre (micron)

CHAPTER 1

Alignment with Government Strategic Priorities

ALIGNMENT WITH GOVERNMENT STRATEGIC PRIORITIES

This catalogue of investment projects has been developed in alignment with the strategic priorities of the Government of Ukraine, as defined in the national economic recovery agenda, sectoral development policies, and key international frameworks. These include the **Ukraine Plan (UP)**, prepared under the EU's **Ukraine Facility**[4], and the **Ukraine Investment Framework (UIF)**, coordinated with international partners.

The Government's economic strategy focuses on rebuilding a **modern**, **competitive economy**: one that is export-oriented, innovation-driven, and fully integrated into the European and global markets. Private investment is central to this vision, and the projects presented here are designed to accelerate this transformation.

The 11 sectors featured in this catalogue have been selected for their strong alignment with Ukraine's policy agenda and their relevance to three overarching priorities: **(1) resilience and security**, **(2) modernisation and competitiveness**, and **(3) European integration**.

ENERGY

A strategic sector for resilience and green transformation. Priority areas include renewable energy, decentralised generation, gas infrastructure, energy storage, and green hydrogen – all supporting EU energy security and the Green Deal.

AGRIFOOD

Ukraine is strengthening its role as a global food supplier by scaling up processing capacity and investing in higher value-added production. The sector is central to export recovery, food security, and sustainable agriculture.

TRANSPORT AND LOGISTICS

Fully aligned with Ukraine's goal of integrating into the EU single market and the TEN-T transport corridors. Projects aim to modernise infrastructure, enhance cross-border connectivity, and improve trade logistics.

ICT AND DIGITAL

The digital sector is a proven area of competitive advantage for Ukraine. Projects support digital infrastructure, cybersecurity, public tech platforms and export-oriented services – in line with the Government's priorities.

CRITICAL RAW MATERIALS (CRM)

Ukraine holds significant reserves of key EU-listed critical materials such as titanium, graphite, lithium, and other. This sector supports EU supply chain diversification and is covered under the EU – Ukraine Strategic Partnership on CRMs.

GREEN STEEL

The modernisation of Ukraine's metallurgy sector is essential for industrial recovery and climate goals. Projects promote green steel production and carbon reduction technologies, aligned with EU climate instruments such as the CBAM.

DEFENCE AND DUAL-USE INDUSTRY

National resilience and defence innovation are top priorities. Ukraine is working to scale domestic manufacturing and international co-production, with a growing focus on NATO-compatible and export-ready technologies.

INDUSTRIAL MANUFACTURING

A key sector for industrial diversification and technology upgrading. Supported by Ukraine's localisation policy, the sector includes export-focused manufacturing, industrial park development, and automation.

CONSTRUCTION AND BUILDING MATERIALS

Reconstruction requires modern, efficient, and low-carbon materials. Projects support energy-efficient housing, circular construction, and the rebuilding of public infrastructure – particularly in war-affected regions.

[4] - Ukrainian Plan.

REAL ESTATE AND HOUSING

One of the key enablers of Ukraine's social recovery and long-term economic renewal. The destruction of millions of square meters of housing and commercial property has created urgent needs for reconstruction and new development across urban and rural areas. At the same time, shifting demographics, internal displacement, and economic migration have created new demands for modern, energy-efficient, and affordable housing. This sector is essential for restoring livable cities, attracting back human capital, and enabling local economic activity.

HEALTHCARE

The healthcare sector is central to Ukraine's recovery and long-term resilience. russia's war has devastated medical infrastructure and sharply increased demand for emergency care, rehabilitation, and mental health services – particularly for wounded servicemen and civilians. At the same time, the COVID-19 pandemic underscored the strategic need for domestic pharmaceutical and medical equipment production, highlighting vulnerabilities in global supply chains.

Ukraine now faces an urgent need to expand and modernise its healthcare system, including local manufacturing of essential medicines, development of integrated rehabilitation centers, and investment in digital health. These efforts are not only vital for protecting human capital but also present long-term market opportunities in a sector driven by demographic trends and rising demand for quality care.

AND PRIVATE EQUITY AND INVESTMENT FUNDS

Ukraine recognises the need to scale private capital flows through private equity funds, blended finance, and co-investment platforms – particularly for SMEs, innovation, and infrastructure.

Each sector featured in this catalogue has been selected not only for its investment attractiveness, but for its systemic role in Ukraine's recovery and transformation. These projects represent a concrete interface between government priorities and market opportunities – offering investors a direct pathway to support and benefit from Ukraine's long-term development.

CHAPTER 2

Ukraine's Investment Potential

UKRAINE'S INVESTMENT POTENTIAL

As part of our work behind this catalogue, we conducted a review of official sectoral strategies developed by Ukrainian ministries and national planning documents outlining the development of priority and emerging industries.

Based on this analysis, we estimate that the total investment potential across just six key sectors of the Ukrainian economy (energy, transport & logistics, agriculture, green steel, machinery and CRM) exceeds **$300 bn over the next 10 years**. This figure reflects the level of capital required to meet the government's sectoral development goals and long-term modernisation plans. The scale of required investment demonstrates both the urgency of rebuilding and the **strategic opportunity for investors to enter sectors positioned for accelerated growth and transformation**.

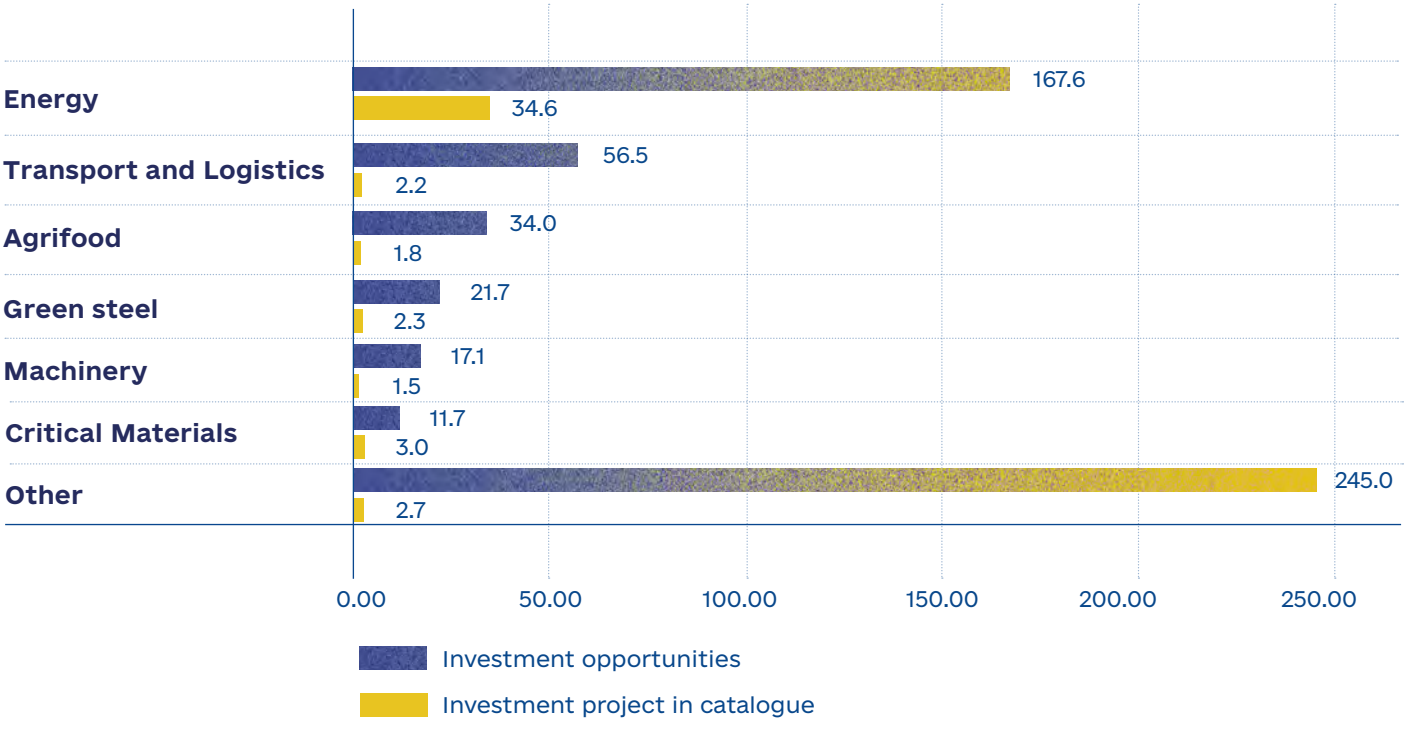

TOTAL INVESTMENT POTENTIAL

6 KEY SECTORS OF THE UKRAINIAN ECONOMY

USD 300 bn

over the next 10 years

ALIGNMENT OF INVESTMENT OPPORTUNITIES WITH EXISTING INVESTMENT PROJECTS IN THE PRIVATE AND PUBLIC SECTORS

It also implies that over the next 10 years, Ukraine is poised to become a major market for the supply of equipment, machinery, industrial systems, and other types of capital goods required to enable reconstruction, and economic modernisation.

According to estimates by KSE experts, the demand for equipment by 2034 is projected to exceed **€33.8 bn**, covering the following key categories:

EQUIPMENT POTENTIAL – €33.8 BLN PER YEAR IN 2034

ELECTRICAL EQUIPMENT AND MACHINES — €6.7 BLN

- Turbines
- Transformers
- Power machines
- Generators
- Circuit Breakers
- Electrical Control Systems
- Regulators

HEAVY AND INDUSTRIAL EQUIPMENT, MACHINES — €6.7 BLN

- Metallurgical equipment
- Compressor stations
- Separators, mixers
- Waste management
- Emission Control Systems
- Excavators, bulldozers
- Cranes
- Forklifts, Loaders
- Dump Trucks
- Conveyor Systems

AGRICULTURAL MACHINERY — €6.8 BLN

- Tractors
- Combine Harvesters
- Plows
- Seed Drills
- Irrigation Equipment
- Sprayers
- Balers

TRANSPORT — €8.4 BLN

- Locomotives and wagons
- Passenger and cargo transport
- Car trailers
- Air transport
- Ships, barges and tugboats

ELECTRONICS, OPTICS — €5.2 BLN

- Household appliances
- Communication devices

CHAPTER 3

Government Support Instruments and Financing Mechanisms

GOVERNMENT SUPPORT INSTRUMENTS AND FINANCING MECHANISMS

To accelerate private investment and support Ukraine's economic recovery, the government has developed a broad portfolio of support instruments aimed at reducing investor risks, lowering entry barriers and enabling sustainable business operations. These include tax and customs incentives, infrastructure and land solutions, regulatory and legal simplifications, targeted financial tools, and labor force development programmes. Many of these tools are aligned with Ukraine's EU integration process and international best practices. Furthermore, they are continuously evolving in coordination with international partners.

1. TAX AND CUSTOMS INCENTIVES

Ukraine offers competitive fiscal policies to reduce the cost of investment:

Tax holidays for investors operating in designated **industrial parks** and potential **special economic zones (SEZs)**

VAT exemptions and fast-track refunds for equipment and machinery imports for production purposes

Accelerated depreciation and reduced corporate tax obligations under defined strategic projects

2. INFRASTRUCTURE AND LAND INCENTIVES

Investors can benefit from pre-zoned land, development-ready infrastructure and fast-track construction approvals in **industrial parks**:

Access to **greenfield and brownfield sites**

Support for land acquisition and **utilities connection**

Priority access to **state co-financing** for infrastructure in eligible locations

3. REGULATORY AND LEGAL INCENTIVES

The government has introduced multiple mechanisms to streamline administrative procedures and protect investor rights:

Simplified permitting and licensing, including digitalised workflows and model approvals

Institutional support for **Public-Private Partnerships (PPPs)** in infrastructure, energy, transport and municipal services

Transparent access to subsoil and geological data for resource-related investments

Unique legal and tax framework tailored for tech, R&D and creative economy businesses **Diia.City**:

- **Reduced tax burden**
- **Flexible employment models**, such as gig contracts with full legal protection
- **Intellectual property protection**, investor-friendly corporate governance, and tools for startup equity structuring
- Access to **simplified procedures for investment**, M&A, and stock options.

4. FINANCIAL INCENTIVES

A wide range of financial tools is available through Ukraine Investment Framework from EU, G2G agreements, partner IFIs, Ukraine Development Fund and the private banking sector:

The **Affordable Loans Programme (5-7-9%)** supports SMEs in priority sectors

Grants, **subsidies**, and **risk-sharing instruments** are available for export-focused companies and large investments

The **Ukraine Investment Framework (UIF)** under the EU's Ukraine Facility provides €9.3 bn guarantees, concessional finance and technical assistance for high-impact projects.

5. LABOR AND TRAINING INCENTIVES

To support workforce readiness and address labor shortages, Ukraine offers:

Reskilling and upskilling programmes through public-private platforms, including digital tools and micro-credentials

Wage subsidies and employment support schemes for businesses hiring displaced persons, veterans and vulnerable populations.

Ukraine is currently working with the United States to establish the **Ukraine Recovery Fund** aimed at co-financing projects in CRM, oil and gas extraction, as well as related infrastructure initiatives. The fund's framework and operational details will be presented during the Ukraine Recovery Conference 2025 in Rome.

KEY RESOURCES AND PLATFORMS

1. Tax and Customs, Infrastructure and Land Incentives:

- UkraineInvest (Support for Significant Investments)[5]
- Industrial Parks Platform (Ministry of Economy)[6]

2. Regulatory and Legal Incentives:

- State Service of Geology and Subsoil of Ukraine[7]
- Public-Private Partnership Agency of Ukraine[8]
- Diia.City[9]

3. Financing Programmes:

- Ukraine Investment Framework and Financial Instruments Guide[10]
- Export Credit Agency of Ukraine (Programmes)[11]
- List of Partner Country ECAs[12]

These instruments form the foundation for a modern investment environment and reflect the government's commitment to enabling private-sector-led recovery and growth.

[5] - UkraineInvest.
[6] - Industrial Parks Platform.
[7] - State Service of Geology and Subsoil of Ukraine.
[8] - Public-Private Partnership Agency of Ukraine.

[10] - Ukraine Investment Framework and Financial Instruments Guide.
[11] - Export Credit Agency of Ukraine.
[12] - List of Partner Country ECAs.

CHAPTER 4

Sectoral Overview and Investment Projects

4.1 AGRIFOOD SECTOR

Ukraine is one of the world's key contributors to global food security, traditionally supplying enough agricultural exports to **feed around 400 mln people across 100 countries** – a role it continues to uphold despite ongoing challenges. In the medium term, Ukraine has the potential to double its agricultural exports and supply food to as many as 600 mln people worldwide[13].

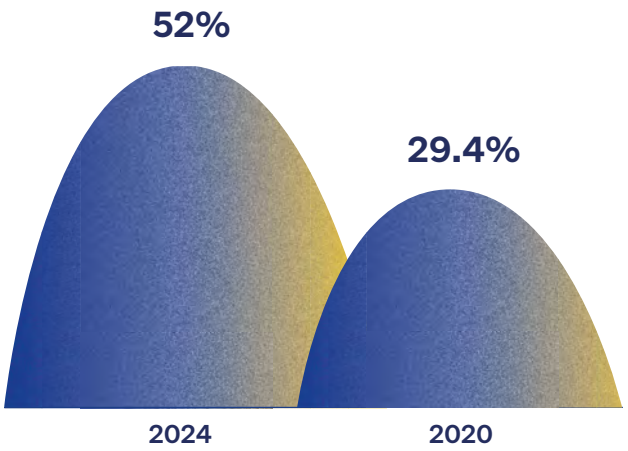

Prior to the war, agriculture accounted for 10.9% of Ukraine's GDP and, when combined with processing, made up 20% of GDP. The russian invasion and its consequences (hostilities, blockade of ports, loss of control over part of the territory, reduction of total arable area surface) caused a significant decline in agricultural output, which led to a drop in the sector's contribution to GDP (8.6% in 2022 and 7.1% in 2024[14]).

In 2021, agriculture represented

10.9 %	**2.7**	**~ 17%**
of Ukraine's GDP	million people employed	the total labour force

Despite the above, the agrifood sector has demonstrated considerable resilience, remaining a key component of the country's exports. Although the relentless attacks targeting Ukraine aim to provoke a food crisis, the country has maintained domestic food security and reinforced its position in the global market. Since the start of russia's full-scale war, the EU has remained a vital destination for Ukraine's **agrifood exports**, consistently **accounting for over 50%** (**52% in 2024**, 55.2% in 2022, compared to **29.4% in 2020**).

UKRAINE'S AGRIFOOD EXPORTS TO THE EU

As of 2023, the total arable area had decreased to 31.7 mln hectares due to occupation and contamination by explosive devices. According to the RDNA4, **total damage in the agriculture sector amounts to $11.2 bn, while losses amount to $72.7 bn**. The **total recovery and reconstruction needs** in the sector **are estimated at $55.5 bn** over 10 years[15].

In addition, work is ongoing with international partners to expand sales of products in various commodity categories. In 2024, Ukrainian producers secured access to foreign markets for **16 groups of goods in 9 countries** around the world. Regarding agricultural output, cereals and industrial crops intended for export dominate Ukrainian production. In total, **in 2024**, **Ukraine exported 78.3 mln tonnes of agricultural products** ($24.7 bn).

Ukraine's agricultural sector comprises a **diverse community of producers**, from small farmers cultivating just a few hectares to large companies managing thousands of hectares of farmland. Most agricultural land is privately owned and leased to these enterprises, creating financial ties between these companies and hundreds of thousands of landowners, the majority living in rural areas.

Crop production and animal husbandry are the main branches of agriculture, though their production is disproportionate. As of 2022, crop production in Ukraine accounted for 78.2% of total agricultural output while animal production made up 21.8%.[16] Historically crop production dominates because of natural advantages, profitability, faster returns and strong export potential while animal husbandry faces long-term capital needs, higher costs and weaker market position.

[13] - Agro-industrial complex development strategy.
[14] - The State Statistics Service of Ukraine.
[15] - The World Bank - RAPID DAMAGE AND NEEDS ASSESSMENT (RDNA4), February 2025
[16] - The State Statistics Service of Ukraine.

Animal husbandry focuses on the production of meat (poultry, pork, beef), milk, eggs, and other animal products. Over the past two decades, Ukraine's livestock sector has experienced an intense transformation, most notably a sharp rise in poultry production, compared to smaller increases in pork and beef. At the same time, milk processors continue to invest in production and modernise their capacities. In early 2025, larger-scale agricultural enterprises produced more milk than individual households for the first time in many years.

Between 2015 and 2021, Ukraine's **agrifood processing and manufacturing** (AFPM) industry grew steadily at an annual rate of 3.0%.

In 2022, it experienced a decline of 19.9% — less severe than the national GDP contraction of 28.8% — followed by a partial rebound of 10.1% in 2023. The Ukrainian AFPM industry produces a wide range of product categories, including vegetable and animal oils and fats, meat and dairy products, baked goods, grain mill and starch products, processed fruits and vegetables, animal feed, fish products, as well as items such as cocoa, chocolate, sugar, confectionery, and beverages. Ukraine's agrifood processing sector benefits from access to a competitive raw material base, favourable geographic location, and established logistics infrastructure.

The average cost of one tonne of agricultural products in Ukraine is approximately five to eight times lower than in other EU countries.

Ukraine remains a key global player in terms of food security. The state budget of Ukraine for 2025 recognises importance of the agricultural sector, by allocating nearly $150 mln to support priority areas, develop critical capabilities, and restore pre-wartime conditions[17]. The sector's continued development is supported by government programmes, as well as by international institutions and partner countries. Attracting investment in the country's agricultural sector will enhance its production capacity, foster innovation, reinforce food security, and contribute to addressing key social challenges faced by rural communities.

SWOT-ANALYSIS

Strengths

- **Extensive arable land and fertile black soils** – nearly 70% of Ukraine's arable land consists of black soil. Ukraine ranks **first in Europe** and **sixth globally** in terms of **black soil (chernozem) coverage**
- **Favourable climatic conditions** suitable for a wide range of crops and livestock farming
- **Advantageous geographical location for trade routes** incl. proximity to the European Union, position along major East–West and North–South trade corridors, and access to key seaports
- **Diversified logistics system, extensive rail network, and well-developed infrastructure in certain regions**, including grain terminals, logistics chains, and agricultural clusters
- **Skilled professionals** with **broad expertise**, capable of managing farming operations efficiently
- **Broad and diversified portfolio of agricultural product categories**, ensuring a balanced presence across various segments and markets
- **Strong export orientation** and access to foreign exchange earnings enable effective hedging against currency risks
- **Resilience to economic shocks e.g.**, Ukraine's agrifood processing sector outperformed the broader economy in 2022

Weaknesses

- **Dependence on imported inputs** (seeds, fertilisers, crop protection products), **technological goods**, and **equipment**
- **High dependence on access to export markets**, which makes the sector vulnerable to trade disruptions (e.g., revised tariffs, blocked ports, and transport corridors)
- **Land contamination** and **soil degradation** – around **23% of Ukraine's territory** is potentially contaminated with explosive **remnants of war**
- **Ageing infrastructure**, with many facilities for processing, irrigation, and storage being outdated or damaged
- Significant **harvesting**, **post-harvest**, **and storage losses** due to underfunded means of production
- **Shrinking domestic demand** caused by population displacement and migration
- **Limited access to affordable financing** and high borrowing costs
- **Labour shortages** and **declining workforce quality**, exacerbated by migration, urbanisation, security risks, and military mobilisation
- Comparatively **low level of raw material processing**, resulting in **limited value-added production**
- **Limited agricultural land reform** and property ownership issues

[17] – Government Portal.

Opportunities

- **Integration into the European Union**, aligning quality standards with the requirements of key high-margin sales markets
- Development of the **processing sector**, **especially deep processing**, to boost value-added output
- Potential for **localising the production of agricultural inputs** (such as seeds, fertilisers, crop protection chemicals), machinery and equipment, as well as import substitution
- Deployment of **new infrastructure**, enhancement of **logistics and transport networks**, development, reconstruction, and modernisation of irrigation systems, along with demining projects
- Significant potential for **processing crop and livestock waste e.g.**, **utilising organic waste** into usable resources
- **Expansion into organic farming** given extensive land resources, aligning with the global shift towards healthy eating and demand for organic products
- Adoption of **AgriTech solutions and innovative technologies**
- Access to financing through special **loan programmes**, **grants**, and **PPPs**
- **Further opening up of the agricultural land market** to opportunities for transparent land ownership

Threats

- **War-related security threats**, esp. attacks by russia on Ukraine's infrastructure, especially those leading to power outages
- **Logistic constraints** caused by the full-scale invasion (from blocked ports and rerouted land transit to increased bargaining power of intermediaries, e.g. distributors)
- **Environmental challenges** e.g., abnormal weather due to climate change, soil depletion, and destruction of the Kakhovka HPP dam, requiring irrigation of significant areas
- **Unfavourable shifts in global trade dynamics and policies** affecting Ukraine's trade flows
- **Intensifying competition from other countries targeting key international markets**, which may limit Ukraine's market share and growth opportunities
- **Rising costs** driven by **compliance with climate initiatives** (including challenges related to the implementation of the Carbon Border Adjustment Mechanism - CBAM) and the **need for significant investments** to comply with European Union legislation on industrial emissions regulations

AGRIFOOD SECTOR

Highlighted investment projects

VOLYN REGION

AGRIFOOD, CROP PRODUCTION

FRUIT WOODLANDS L.T.D.

Complex for Growing, Cooling, Sorting and Packing Blueberries

- **Brief Description:** Project aims to develop a 90-hectare blueberry plantation and a processing complex for cooling, sorting, and storing blueberries using advanced Dutch technology for efficient production and high-quality output.
- **Products/Services:** 1. Blueberries are grown on their own fields – 1.54 MT per year. 2. Sorting and sale of blueberries grown by other producers – 1.58 MT per year.
- **Technological Parameters Of The Project:** The project incorporates advanced Dutch technologies, ensuring protection against various risks including frost, rain, wind, bird damage, power outages, lack of personnel etc.
- **Project Strengths:** According to IBO research, during the blueberry harvest period in Ukraine (June-September), there is a shortage of quality berries on the market, especially on the UK market. Implementation of the project makes it possible to grow blueberries and sell them in the period of shortage in the market.
- **Target Market:** The EU market, particularly the UK, which experiences internal shortages during the harvest period in Ukraine (according to research by the International Blueberry Organisation (IBO)).

BUSINESS MODEL

Source of income: The primary source of income for our project is from selling blueberries cultivated on-site. We also generate additional revenue by utilising our sorting complex to process blueberries from other producers, including during the off-season in Ukraine, sourcing from international markets such as Peru, Chile, and South Africa.

Convenient location

- **156 km** from the Polish border
- **806 km** from the port of Odesa
- **777 km** from the port of Gdansk
- **432 km** from the cargo terminal at Warsaw airport

Our project is already active

17 hectares of berry bushes were planted in 2020.

90 hectares a reasonable expansion to the entire area of the site.

400 people can be employed.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 81%
OPEX 19%

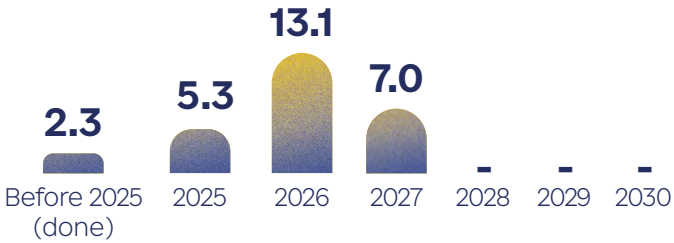

Type of financing:
project finance, debt, equity

Project Status: The project is under implementation. In 2020, the first phase of 17 hectares of blueberries was planted, a water storage pool of 8,000 m3 was built, and a pumping station for irrigating 50 hectares of plantations.

- **Expected Financial Indicators**

NPV (10 years) **$4.2 mln**	Revenue – [full cap.] (2030) **$15.8 mln**	Project launch period **3 years**
EBITDA – [full cap.] (2030) **$5.4 mln**	IRR **19.3%**	DPP **8.5 years**

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

Design works - "van Oostrum Woerden", "FFT Projects BV.", The Netherlands.

Construction - LLENTAB AB, Sweden, refrigeration equipment - VAN KEMPEN and VAN AMERONGEN, Netherlands. Sorting machines - Elifab Solutions, Spain.

Seedlings - world leader company Fall Creek®.

Protection against: frost - wind machines "ORCHARD RITE", France; from rain, hail and wind - "Haygrove", England, "Valente S.r.l.", Italy; from birds "Bird Control Group", Netherlands.

KEY POINTS OF PROJECT IMPLEMENTATION

2025

- Purchase of seedlings.
- Start of construction of sorting complex, dormitor.

2026

- Purchase of seedlings.
- Construction of protection systems against frost, rain, wind, and birds;
- Purchase of equipment for the sorting complex and dormitory;
- Purchase of transport vehicles for blueberry transportation;
- Launch of a dormitory for staff and a sorting complex, on its own 14 hectares. and purchasing blueberries from other producers.

BUSINESS MODEL

TAK-MOLOKO" LLC - dairy farm located in the Vinnytsia region, Pogrebyshchensky district, Borshchagivka village. Today, the farm keeps 850 cows, of which 430 are milked. The goal is to create modern highly automated dairy complex with a capacity of 1,500 dairy cows with business directions: milk production; heifers genetic center; growing and harvesting of forage. The company's team (47 employees) has many years of experience and the ability to develop a highly efficient large-scale dairy complex. It will ensure an increase in the supply of price-competitive raw milk, "green" energy, and the expansion of the domestic heifer sales market. Thanks to the expansion of the existing dairy business, additional jobs will be created both in the economy and in related industries (ratio 1:10), European salary levels will be ensured for the employees of the complex, social stability will be supported in rural areas, and conditions will be created for the return of forcibly displaced persons.

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

TAK AGRO LCC (proprietary company), Global Agro Finance LCC (management of dairy farm), Advisory Centre of the Association of Milk Producers (technology).

KEY POINTS OF PROJECT IMPLEMENTATION

- Approval of the project, obtaining financing.
- Approval of contractors for construction. Purchase of machinery, animals, equipment.
- Construction of a farm and necessary premises.
- Beginning of the implementation of the business project at full capacity.

[1]The project information and financial indicators are provided by company-initiator of the project.

AGRIFOOD, PROCESSING

POLTAVA REGION

SMART TECH INDUSTRY LLC

Trout Valley

- **Brief Description:** The Trout Valley project envisages the creation of a vertically integrated high-tech fish processing complex specialising in organic trout farming using RAS technology and its deep processing. It will ensure the production of high-quality trout products grown in accordance with modern environmental standards. The complex consists of 5 production modules with a total capacity of 2,500 tonnes per year. We are committed to applying advanced cultivation and deep processing technologies, contributing to the sustainable development of the agricultural sector and strengthening the country's food security through the production of high-quality and environmentally friendly products. The goal is to create a sustainable source of quality fish for the domestic and international markets. The business is focused on selling premium products through B2B, B2C and B2G channels. The main advantages are environmental friendliness, full quality control, innovative technologies and local production.
- **Products/Services:** Trout gutted, skin-on fillet, portioned. By-products - ground meat, heads. Processing and packaging services for B2B.
- **Technological Parameters Of The Project:** Innovative recirculating water supply (RAS) technology, Danish engineering, process automation. Minimal environmental footprint.
- **Project Strengths:** Premium quality, transparent origin, environmental responsibility. Full cycle: from catch to packaging - up to 60 minutes.
- **Target Market:** HoReCa, retail, public procurement in Ukraine. Exports to the EU. Buyers appreciate freshness, quality and local production.

Projects highlights[1], $ mln

Financing structure:
CAPEX 26% / OPEX 74%
($13 mln of the required financing will be spent 100% on CAPEX)

Type of financing:
equity, strategic partnership, debt financing, project financing

Project Status: Project stage - ready for implementation. Land is leased. What was done at the construction stage - permission for preparatory work.

Expected Financial Indicators

NPV (5 years)
$29.9 mln

EBITDA (5th year)
$19.0 mln

Project launch period
3 years

Revenue (5th year)
$49.6 mln

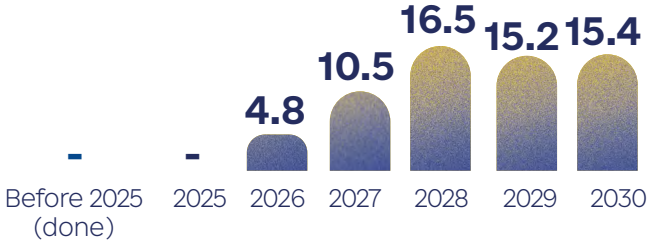

IRR
30.7%

DPP
2.5 years

BUSINESS MODEL

Trout Valley is an innovative Ukrainian aquaculture project that combines ecological trout farming using RAS technology with deep processing and a multi-channel distribution system. We create a full production cycle - from caviar to packaged products - with quality control at every stage. The products are positioned in the mid-premium segment and can be sold through supermarkets, HoReCa, online trading, public procurement and export. The project is being implemented in stages: 5 modules with a total capacity of 2,500 tonnes of fish per year are being built over three years. The total investment is $13 mln, part of which will be spent on construction and processing equipment, as well as covering operating costs in the first year. Subsequent stages of construction and launch of production will be covered by investments and revenues from the modules already in operation. The expected revenue for the fourth year (after all modules reach full capacity) is over $24 mln. Trout Valley is a unique opportunity to invest in an environmentally responsible business with a transparent structure, stable profitability and export potential. We are ready to scale the model and are open to international partnerships.

INVESTMENTS IN THE PROJECT, $ MLN

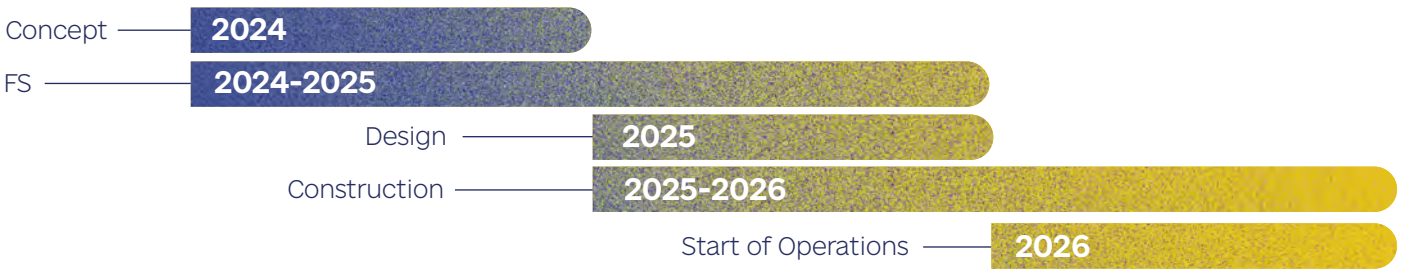

KEY PARTNERS

NIRAS A/S (RAS technologies), Pisces Fish Machinery, Inc. (processing technologies), Dr. Michael Bech (consultancy), universities (human resources, R&D), GUBAR ARCHITECTS and SANINA ARCH CLUB, LENTAB UKRAINE, Kingspan Ukraine, feed and egg suppliers, logistics companies, retail chains, public procurement (Prozorro).

INCENTIVES

The Trout Valley project, located on the territory of SMART TECH INDUSTRY Industrial Park, enjoys significant tax incentives, including VAT exemption on equipment imports, reduced income tax and favorable land lease terms. These incentives help to significantly reduce the financial burden, accelerate the payback of the project and ensure its competitiveness in the market. This makes Trout Valley attractive to investors and strategic for the development of the industry.

RIVNE REGION

HEMPY UA

HEMPY UA Industrial park

- **Brief Description:** HEMPY UA is a Ukrainian project focused on the cultivation and processing of industrial hemp in line with modern ecological and innovative standards. The goal is to establish a full production cycle — from farming to finished products. The company holds all necessary permits, licenses, and certificates for hemp cultivation and primary processing.
- **Products/Services:** HEMPY UA specialises in the cultivation and processing of industrial hemp to produce high-quality hemp fiber, shives, and hurd for use in textiles, construction, and biocomposites. The company also provides services related to hemp harvesting, processing, and raw material supply.
- **Technological Parameters Of The Project:** The project utilises innovative harvesting and decortication technologies adapted for Ukrainian hemp varieties. Eco-friendly processing lines ensure minimal waste and energy efficiency.
- **Project Strengths:** HEMPY UA combines certified Ukrainian hemp genetics, innovative eco-technologies, and growing demand for sustainable materials. The project offers strong export potential, low ecological footprint, and a scalable production model.
- **Target Market:** HEMPY UA targets European manufacturers in the textile, construction, automotive, and bioplastics sectors seeking sustainable raw materials. Potential customers include eco-conscious producers, green building firms, and biocomposite developers.

- **Projects highlights[1], $ mln**

Required financing **163.0** | **163.0** Total budget

Financing structure:
CAPEX 70%
OPEX 30%

Type of financing:
a mixed model including equity investment, project finance, and potential concessional debt.

Project Status: Project stage: FS. Land is leased. What was done at the construction stage: design and environmental assessment, permit.

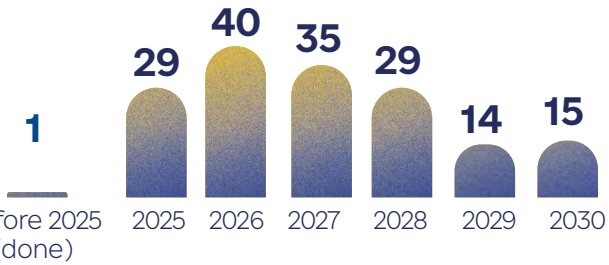

- **Expected Financial Indicators:** Expected annual revenue from the first phase exceeds $22 mln, including $13.5 mln from fiber, $6.2 mln from shives, and $3.1 mln from geotextile.

NPV (10 years)	EBITDA (8th year)	Project launch period
$42.5 mln	**$24 mln**	**3 years**
Revenue (8th year)	IRR	DPP
$48.1 mln	**33.9%**	**4.5 years**

BUSINESS MODEL

- Company operates a vertically integrated model covering the full hemp value chain — from cultivation to deep processing into fiber, hurd, geotextile, and cellulose.
- Revenue is generated through B2B sales to manufacturers in construction, textiles, packaging, and composites.

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

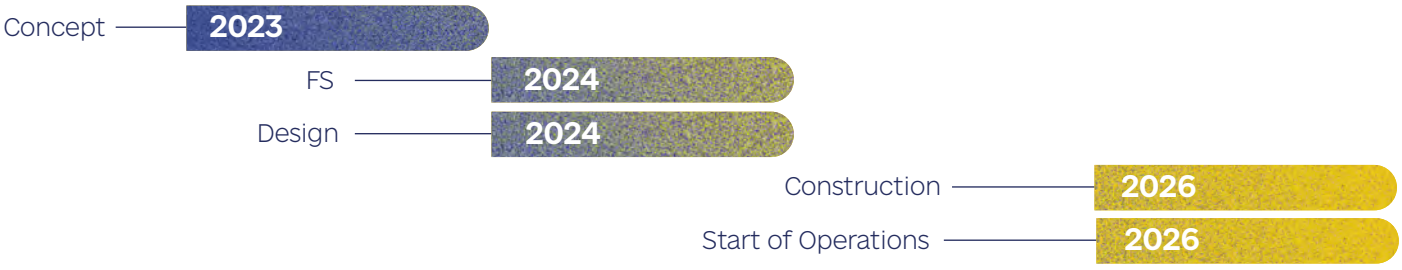

Leading European equipment suppliers for decortication, geotextile, and cellulose processing. Strategic partnerships include Ukrainian agricultural producers, export logistics companies, and investment entities.

INCENTIVES

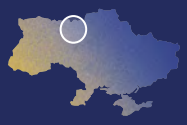

The project is located in an officially registered industrial park in Dubno, Rivne region, and is eligible for Ukrainian government incentives, including tax exemptions and infrastructure support.

HEMPY UA is located in Dubno, Rivne region, within a registered industrial park. Eligible for Ukrainian government incentives. Full production cycle: cultivation, primary and processing.

"Volodarsko-Volynskiy Flax Plant" PSJC

Processing industrial hemp into long fiber for the textile industry and supporting farmers in Ukraine

- **Brief Description:** MA'RIJANY project is implementing the primary processing of hemp stalk with the production of long hemp fiber for the textile industry, short fiber and shives. The biomass processing is carried out on the basis of the existing "Volodarsko-Volynskiy flax plant" PSJC in Ryzhany village, Khoroshiv community, Zhytomyr region.
- **Products/Services:** Long hemp fiber, short hemp fiber and hemp shives.
- **Technological Parameters Of The Project:** Primary processing line for bast crops from a leading global manufacturer is installed. For efficient sorting of primary processing products, the long fiber line is equipped with an auxiliary short fiber line, an aspiration system for separating dust from the fescue fraction and a semi-automatic shives packing and baling line. Purchased 4 state-of-the-art harvesters from a leading global manufacturer. Also, purchased auxiliary harvesting equipment: returners, balers, transport trailers.
- **Project Strengths:** Project will meet rising demand for sustainable textile fibers in the EU and will create a localised market for farmers. Project will directly create over 100 jobs and will have long-term spillover effects being the raw material base for many industries.
- **Target Market:**
  - Long hemp fiber (2k t annually): European textile market, primarily supplying spinning mills and fabric manufacturers.
  - Short hemp fiber (4,5k t annually): international and local market as a raw material in the production of nonwoven and construction materials.
  - Hemp shives (5,6k t annually): international and local market for the animal bedding, insulation, and construction industries.

Projects highlights[1], $ mln

Financing structure:
CAPEX 80% / OPEX 20%

Type of financing:
equity, private investing

Project Status:
- Funding has been raised from private investors, covering about 50% of the project budget;
- Official letters of intent with defined procurement volumes were received from key customers - leading European companies;
- Obtained a license for the cultivation of industrial hemp;
- Seeding works on an area of about 540 hectares have begun;
- A contract for the supply of main production equipment from a leading global manufacturer has been concluded;
- Construction and renovation works on the site are currently underway.

Expected Financial Indicators

NPV (10 years) **$43.5 mln**	EBITDA (5th year) **$33.2 mln**	Project launch period **4 years**
Revenue (5th year) **$68.6 mln**	IRR **13.5%**	DPP **6 years**

BUSINESS MODEL

- Hemp cultivation: We are engaging local farmers for hemp cultivation. We also manage our own farming operations to grow and harvest hemp, ensuring control over production quality and output.
- Hemp harvesting: We are providing harvesting services to local farmers.
- Fiber extraction: We are utilising mechanical decortication processes to extract hemp fibers from the straw.
- Product sales: Long fibers will be supplied to spinning mills and textile manufacturers, short fibers will be supplied to nonwoven fabric producers and automobile manufacturers and shives will be sold for agricultural use and as eco-friendly building materials.

KEY PARTNERS

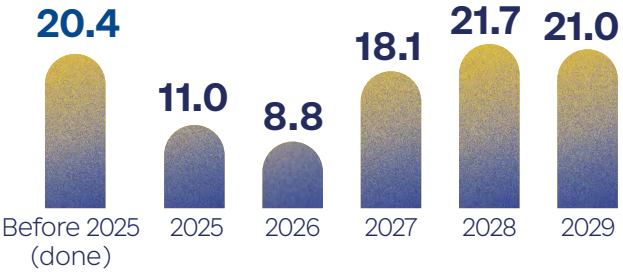

Institute of Bast Crops of the National Academy of Agrarian Sciences of Ukraine - supplier of licensed hemp seeds;

Spinning mills in Europe - main clients for our entire textile fiber;

Manufacturers of building materials, nonwovens, fuel and paper producers, bus manufacturers;

Educational institutions - suppliers of specialised personnel: agronomists, machine operators, tractor drivers, etc.

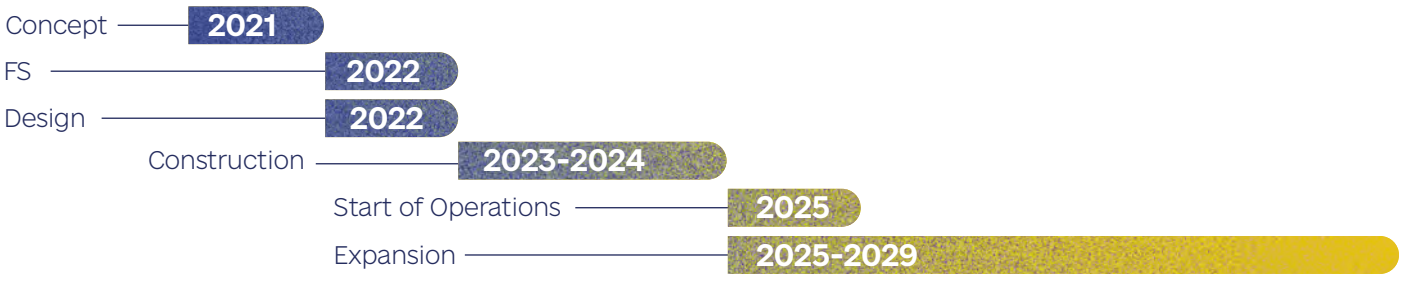

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

We have registered the Ma'Rijany Industrial Park, which provides investment and tax incentives for resident companies, logistical advantages of co-location, and forms a local economic ecosystem. This helps to create a closed production cycle where each stage complements the other, increasing overall efficiency and profitability.

KEY POINTS OF PROJECT IMPLEMENTATION

EUROSEM (ERIDON COMPANY)

Beef Cattle Growing and Processing Complex in Ukraine

- **Brief Description:** The construction of a modern cattle breeding and processing complex involves increasing the size of the current herd and building, reconstructing and upgrading facilities for livestock housing, processing and cooling.
- **Products/Services:** Production of chilled and frozen beef and offal.
- **Technological Parameters Of The Project:** The company's technologists will closely supervise compliance with the organized herd reproduction structure, the preservation of the animals' genotypes and the latest animal husbandry technologies, as well as waste disposal.
- **Project Strengths:**

• This project is profitable and efficient in implementation – it is evidenced not only by the parameters of efficiency and profitability, but by the parameters of attractiveness for investments as well.

• The project's advantage is that it is an existing facility requiring capital expenditure to increase production capacity, as well as a small amount of funds to expand operations.

- **Target Market:** We are looking for promising markets are those of the EU and the Middle East. Asian countries can also play a significant role, given their much higher economic growth rates are much higher than in other countries.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 99% / OPEX 1%*
* The project will involve expanding the existing cattle breeding and processing capacities.

Type of financing:
equity

Project Status: Project stage – concept of increasing the capacity of an existing enterprise. Land partly owned and partly long-term leased.

- **Expected Financial Indicators:**

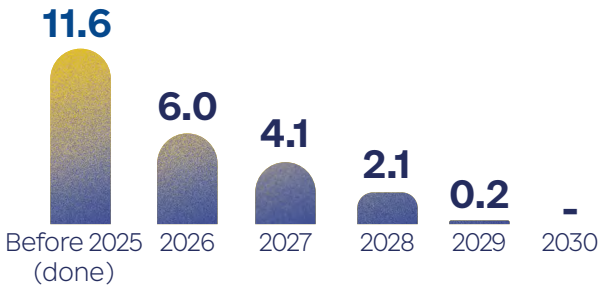

NPV (10 years)	EBITDA (5th year)	Project launch period
$13.8 mln	**$4 mln***	**4 years**
Revenue (5th year)	IRR	DPP
$10.1 mln**	**15.8%**	**7.2 years**

*The EBITDA is expected to rise to $10.0 mln per year as cultivation progresses.
**The revenue is expected to rise to $16.3 mln per year as cultivation progresses.

BUSINESS MODEL

- The project is based on the company's existing herd and production facilities for housing, slaughtering and cooling.
- Is required an increase in the number of livestock and cattle, as well as an increase and/or upgrade production capacity.
- The main revenue will be generated from the sale of beef from the grown herd.
- The sales plan envisages selling beef in Ukraine and exporting it to other countries based on the investor's needs and quality requirements.

INVESTMENTS IN THE PROJECT, $ MLN

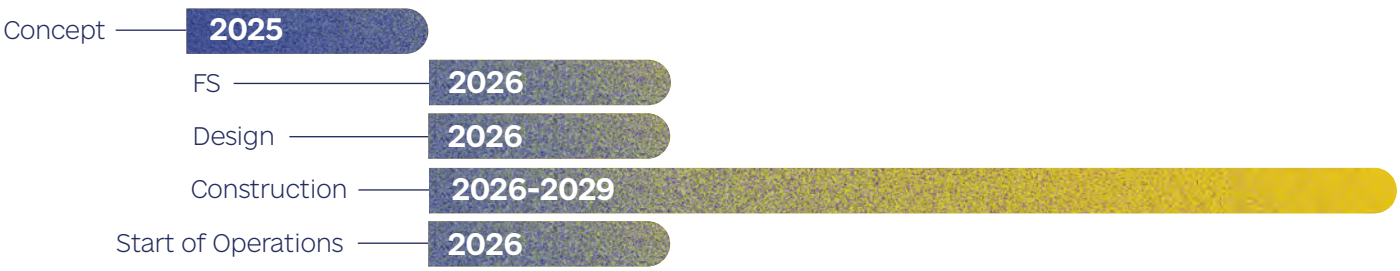

KEY PARTNERS

The company's contribution is 50.1% in the form of cattle breeding facilities, livestock and refrigerators, and partial financing of working capital.

INCENTIVES

The project is not a part of an industrial park and does not involve government support. However, the company's activities may be subject to state support in accordance with the approved state budgets for each year. The financial statements have been prepared in accordance with international standards and have been audited by independent auditors and are available upon request.

BUSINESS MODEL

- The calculation of the financial indicators of the company's projected activity related to the implementation of this project is based on an analysis of similar enterprises; an assessment of structural, technological, economic, and financial potential; and the results of marketing research.
- To account for the time factor and the degree of entrepreneurial risk, the calculated financial indicators are brought to a single point in time (the start of the project implementation) using discounting, without taking inflation into account.
- The discount rate was set at 13.5%.

KEY PARTNERS

Eridon's contribution will consist of an industrial land plot and the company's own funds, with no plans to raise any loans.

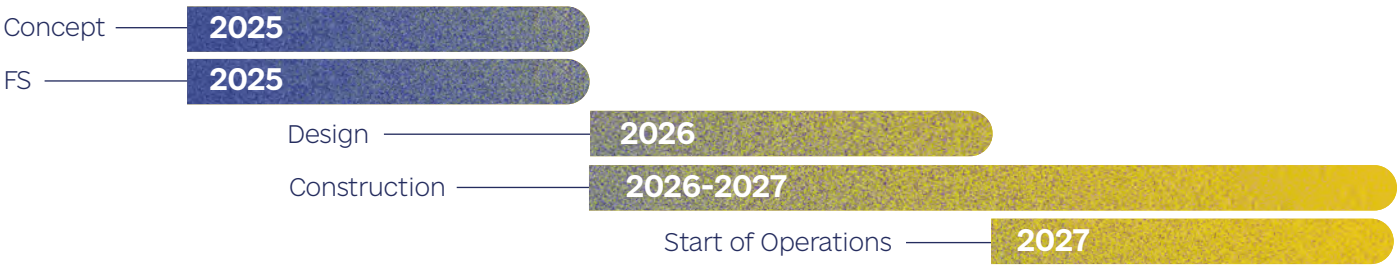

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

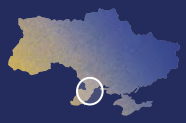

The project is not a part of an industrial park and does not involve government support. The financial statements have been prepared in accordance with international standards and have been audited by independent auditors and are available upon request.

KEY POINTS OF PROJECT IMPLEMENTATION

NIKO AGRO INNOVATIONS

Functional Mushroom BioTech & Circular Biofertilizer Platform

(Exotic Cultivated Mushrooms, production superfoods & organic fertilizer production)

- **Brief Description:** Development of a fully integrated biotech platform in Ukraine for cultivating high-value exotic mushrooms, extracting functional ingredients, and producing organic fertilizers from spent substrate. Each vertical — cultivation, nutraceutical processing, and circular agri-input production — delivers high-margin output. The project supports Ukraine's green recovery through export growth, rural job creation, and zero-waste innovation. All processes are optimized for EU-compliant standards and long-term international market integration.
- **Products/Services:**
  - Fresh and dried exotic mushrooms (shiitake, eryngii, pioppini, reishi, lion's mane and others);
  - Deep processing of mushrooms on functional mushroom powders, extracts, dietary supplements and superfoods;
  - Organic NPK biofertilisers produced from spent mushroom substrate and bioreactor.
- **Technological Parameters Of The Project:** Integrated biotech process combining vertical mushroom cultivation, functional ingredient extraction, drying, encapsulation, and fertilizer granulation. EU standards compliance: all processes aligned with Organic certification and food-grade export requirements.
- **Project Strengths:** Full vertical integration: from substrate sourcing and exotic mushroom cultivation to advanced biotech processing and organic fertilizer production. Resource self-sufficiency: secured land, in-house biomass input, and circular zero-waste system reduce dependency on external supply chains.High-margin product mix: functional extracts, nutraceuticals and premium organic fertilisers.
- **Target Market:** Export-oriented: EU and GCC (Gulf countries) are the primary markets for functional mushroom ingredients, superfoods, and organic biofertilizers. The U.S. and Canadian markets represent long-term strategic opportunities for high-value nutraceuticals. The domestic market focuses on exotic mushrooms and biofertilizers for Ukrainian agriculture.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 95%
OPEX 5%
(for required financing)

Type of financing:
equity or blended financing, including concessional instruments and donor-supported capital

Project Status: Ready for implementation of the end year. Land secured, architectural and engineering design continues (done 60%). Construction start planned for Q1 2026.

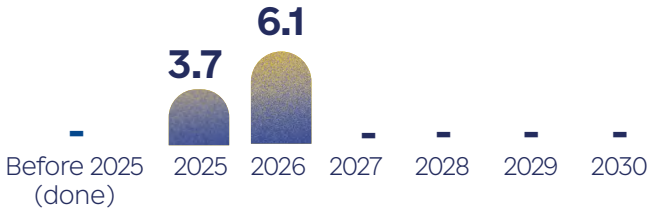

- **Expected Financial Indicators:**

NPV (10 years)	EBITDA (3rd year)	Project launch period
$15.4 mln	**$2.7 mln**	**1.5 years**
Revenue (3rd year)	IRR	DPP
$6.3 mln	**31%**	**3.3 years**

BUSINESS MODEL

- Integrated biotech-driven revenue model based on:
- Export of high-value functional mushrooms (fresh/dried/extracted) to EU & Gulf Cooperation Council countries;
- Sales of branded dietary supplements (extracts), functional snacks, mushroom powder, instant drinks / coffee blends with mushrooms, protein bars via national & international retailers;
- Distribution of NPK-rich organic fertilizers (solid/liquid) through Ukraine's agri-input networks and export to the EU and Gulf countries;
- Proprietary brand development is underway, with plans to position the product line on global e-commerce platforms (Amazon, iHerb) and across key EU retail & health product networks.

INVESTMENTS IN THE PROJECT, $ MLN*

INCENTIVES

Incentive options being explored, including regional development zones and industrial park.

KEY PARTNERS

EU & South Korea/Japanese technology providers – suppliers of growing chambers, sterilisation, extraction systems.

Cooperation with European B2B distributors and retail groups across the functional food, organic fertiliser, and nutraceutical sectors — including interest from specialty organic chains, health-focused retailers, and pharma-oriented distribution networks.

Co-investment engagement - Engagement initiated with several international development finance institutions and impact-oriented funds for potential co-investment and blended financing opportunities.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

* **Over $1.2 mln was invested** into a mushroom facility and mycelium lab in the Kyiv region before 2022. The plant was lost due to a missile strike during the temporary occupation. Core expertise and technologies have been preserved and now underpin the current project.

BUSINESS MODEL

- Agriculture: hemp seed planting material production – inhouse.
- Hemp growth – outsourced to partner agricultural companies, forming two clusters:
  - Cluster №1. Main production (Chernihiv region, radius 100 km from Snovsk)
  - Cluster №2. Ancillary production (Kirovograd region, radius 100 km from Kropyvnytskyi).
- Each cluster will have own decortication and pelleting lines.
- Production: hemp fiber is processed into cellulose and then to paper on main production cite.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1]The project information and financial indicators are provided by company-initiator of the project.

4.2 ENERGY SECTOR

Ukraine's energy sector is a critical pillar of national security and economic recovery. **The sector is undergoing a historic transformation**, both forced by war and driven by long-term strategic goals. The sector offers unparalleled opportunities for investment in view of upcoming EU integration, its shift towards decentralised and green energy and the need to rebuild energy-related infrastructure (e.g., electricity, gas, oil, and heating). Given its natural endowments and regulatory alignment with the EU, **Ukraine could emerge as a future cornerstone of regional energy security and the European Green Deal.**

Ukraine's **power sector** has been among the hardest hit since russia's full-scale invasion in 2022, with over 60% of generation assets (mainly TPPs, RES in the south, and Zaporizhzhia NPP) damaged, destroyed, or occupied.

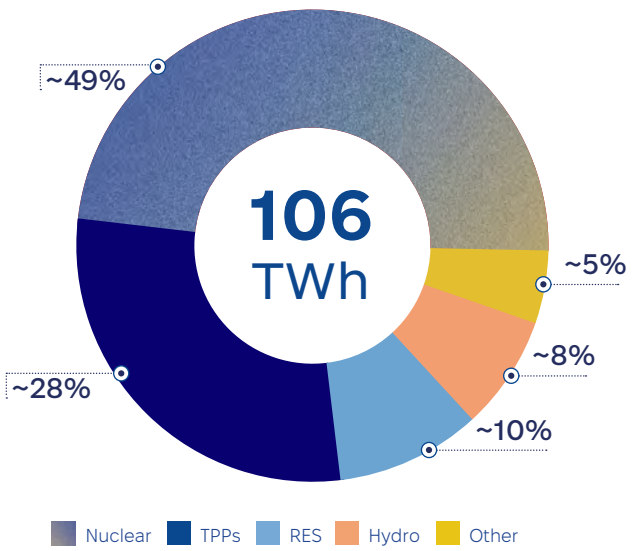

The power system faces overlapping crises: physical losses, occupied regions, Kakhovka HPP destruction, and cyber/missile strikes on vital infrastructure. Nevertheless, it has demonstrated resilience.

Despite adverse conditions, Ukraine's Transmission System Operator (NEC Ukrenergo), has maintained critical balancing, grid frequency stability, and dispatch control, including integration with the European synchronous zone (ENTSO-E).

Emergency imports, rolling blackouts, and civil-military cooperation prevented full system collapse.

The sharp decline in available generation has led to a drastic change in Ukraine's electricity balance. Output fell 32%, from 156 TWh (2021) to 106 TWh (2023). Nuclear (~49%) drove power generation, followed by TPPs (~28%), RES (~10%) and hydro (~8%).

ELECTRICITY GENERATION IN 2023

In June 2024, Ukraine imported a large amount of electricity (over 850GWh) from EU countries to help meet its energy needs. At the same time, inside the country, authorities reduced electricity use where possible and temporarily disconnected industrial users during power shortages.

Despite the disruptions, Ukraine's **RES transition** remains central. Between 2016 and 2021, the country expanded its installed RES capacity (solar, wind, biomass, small hydro) more than 8x to 9.6 GW . Around 24% of RES assets are now damaged or inaccessible, yet momentum is returning. RES accounts for 25% of installed capacity (excluding prosumers) while reconstruction and new investment are underway in safer regions. Furthermore, strategy positions RES as key to EU-aligned recovery.

Integrating intermittent RES has exposed critical weaknesses, notably the lack of balancing reserves and fast-ramping capacity. With limited hydro resources and TPPs unable to operate as flexible peakers, the grid's capacity to integrate RES is significantly constrained.

Battery Energy Storage Systems (BESS) and other fast-response solutions are essential for Ukraine's power sector. Although enabling legislation has been passed and five-year auctions for ancillary services were launched in 2024, the scale-up of these technologies is limited by capital shortages and lack of long-term financing, unclear revenue models, and physical security risks to infrastructure. In this respect, IFI involvement (IFC, EBRD) and government-backed contracts-for-difference (CfD) could accelerate deployment between 2025–2027.

Market Model and Regulatory Framework. Since July 2019, Ukraine has operated a multi-level liberalised electricity market aligned with the EU's Third Energy Package and long-term integration into the European Energy Union. The market includes the Bilateral Contracts Market (BCM) for long-term energy contracts, the Day-Ahead Market (DAM) as a centralised price-setting mechanism, the Intraday Market (IDM) for delivery adjustments, the Balancing Market (BM) for real-time dispatch and deviation correction, and the Ancillary Services (AS) Market, which procures reserves (FCR, FRR, aFRR) to maintain system stability. NEC Ukrenergo acts as the TSO, overseeing dispatch, settlements, and reserve procurement.

Strategic Outlook and Investment Recommendations for the Power Sector. Ukraine's power sector faces both a deep crisis and transformation opportunity. Long-term recovery requires decentralisation of generation and storage, digitisation of asset management and system operations, resilience to physical and cyber threats, and investment de-risking. Investor recommendations:

- Prioritise RES+BESS hybrid projects to meet Ukrenergo's flexibility needs
- Review legal safeguards for wartime asset damage and compensation mechanisms
- Engage in early market entry for ancillary services and frequency response capacity
- Leverage public-private financing platforms (e.g., EU UIF, EBRD, IFC etc.)

Despite wartime damage, Ukraine's power sector shows remarkable resilience. EU integration, a liberal market, and public-private coordination offer a solid foundation for recovery and growth.

GAS AND OIL SECTOR

Ukraine is one of the few European countries with significant untapped oil and gas reserves. It has the second-largest proven gas reserves in Europe and extensive storage capacity, making it a strategic asset for the EU's energy security. Despite the war, Ukraine's domestic gas production has shown resilience, contributing

over 70% of total comsumption in 2023

Ukraine operates one of Europe's largest gas transmission systems, with extensive cross-border interconnectivity and significant unused capacity. Its underground gas storage network, with over 30 bcm of capacity, is among the largest in Europe and can serve both domestic and regional needs.

The government is prioritising the development of new fields through production sharing agreements (PSAs), attracting international partners to explore conventional and unconventional reserves. The potential of offshore Black Sea reserves and deeper gas formations remains largely unexplored. The downstream oil sector, including refining, has suffered major destruction and needs reinvestment from the ground up. Opportunities exist for modular refining units and joint ventures in low-sulfur fuel and petrochemical production.

BIOFUEL SECTOR

Ukraine's biofuel sector is gaining momentum as a pillar of energy resilience and green transition.

As of mid-2025, the country operates **85 biogas plants with a total installed capacity of 140 MWe** and **4 biomethane plants producing 41 mln m³ annually**. At least **7 additional biomethane projects are under development**, with total projected capacity reaching 111 mln m³/year.

Early biomethane exports to the EU began in February 2025. **Production potential is estimated at up to 21.8 bcm per year by 2050**, largely from livestock waste, crop residues, cover crops, and organic by-products. The country has a robust gas infrastructure (33,400 km of pipelines and 1,390 distribution stations) supporting both domestic use and future exports.

HEATING SECTOR

Ukraine's district heating sector is one of the largest in Europe but also among the most outdated. Much of the infrastructure requires full replacement or modernisation. War-related damages and growing energy costs have intensified the need for efficiency improvements and decentralisation.

The transition to modern, energy-efficient, and lower-carbon heating offers **major investment opportunities**. Prospective areas include the integration of biomass, heat pumps, cogeneration, and waste heat recovery. Public-private partnerships, concessional financing, and IFI-backed modernisation programs can support large-scale upgrades, especially in urban centers.

HYDROGEN

Ukraine is well positioned to become a **major supplier of hydrogen to Central Europe**, owing to several competitive advantages. Its substantial zero-carbon energy capacity - including nuclear and renewable sources - could serve as a transitional input for clean hydrogen production. The country also benefits from an extensive natural gas pipeline network that connects directly to Central Europe, making it a strategically attractive supplier to the region.

Gas TSO of Ukraine (GTSOU), EUSTREAM (Slovakia), NET4GAS (Czech Republic), and OGE (Germany) are jointly advancing the Central European Hydrogen Corridor — a planned hydrogen pipeline system intended to transport hydrogen from prospective production hubs in Ukraine, which offers favourable conditions for green hydrogen generation, through Slovakia and the Czech Republic to key demand centres in the EU.

SWOT-ANALYSIS

Strengths

- **Strategic geographic location**, with Ukraine being a key transit and hub country for electricity and gas between Europe and Asia
- **Diversified energy mix**, presence of nuclear, hydro, coal, renewables, and natural gas infrastructure
- **Nuclear power competence**, given the fact that Ukraine operates 16 nuclear reactors (6 currently occupied by russia)
- **High RES Potential** especially wind and solar, in the Southern and Western regions
- **Grid synchronisation** with Europe (ENTSO-E)
- **Strong Industrial Base** and **Technical Expertise** – skilled engineers and technical personnel in generation, transmission, and distribution
- **Support from international partners**. IFIs (EBRD, EIB, EU, USAID, World Bank) have showed a special interest in rebuilding and reforming the sector, providing technical and financial support
- **Strong resource base** for the development of solar and wind power generation across vast territories, coupled with significant natural gas reserves.
- **Developed infrastructure** comprising extensive energy and gas transmission systems, including 30 bcm of underground gas storage capacity.

Weaknesses

- **Aging and war-damaged infrastructure** with many TPPs, grid assets, and substations destroyed or heavily damaged by russian missile attacks
- **High dependence on nuclear** and **fossil fuels**, especially for thermal power plants
- **Low energy efficiency** with energy intensity of the Ukrainian economy remaining one of the highest in Europe
- **Constant changes in market rules**, especially in RES support mechanisms and electricity pricing
- **Financial distress of key market players** e.g., Ukrenergo and Energoatom face liquidity challenges as low consumer solvency and cross-subsidies distort pricing
- **Low reliability and resilience in local grids**, especially in rural areas
- **Limited energy storage and balancing capacity** for integrating variable renewables like wind and solar
- **Underdeveloped domestic gas production** as scaling up extraction requires substantial investment and deployment of modern technologies

Opportunities

- **Rebuilding energy infrastructure with modern, digital, and low-carbon solutions** e.g.: smart grids, modular reactors, decentralised generation
- Alignment with the **EU Green Deal** opens access to markets and funding (CBAM compliance, ETS inclusion, cross-border trade)
- **Expansion of renewables and storage** with growth in solar, wind, and biomass, coupled with battery storage
- **Energy efficiency programs** incl. retrofit of public buildings, industry, and district heating systems with EU and IFI support
- **Decentralised and municipal energy**: initiatives such as rooftop solar, municipal utilities, and energy cooperatives offer resilience and independence
- **Hydrogen and green tech potential** for Ukraine in terms of becoming a producer/ exporter of green hydrogen to the EU
- **Increased regional integration and energy trade** via electricity, biogas and natural gas exports to the EU

Threats

- **Continued military attacks** on energy infrastructure disrupt supply and deter investment
- **Dependence on external financing**: reconstruction and green transition rely heavily on foreign funding, often tied to geopolitical considerations
- **Workforce shortages and brain drain**, emigration and mobilisation reduce the skilled labor pool
- **Environmental and climate risks** e.g., disruption of water systems (e.g. Kakhovka HPP) and droughts impact hydro and thermal generation
- **Public distrust and political risks** e.g., distrust in reforms or privatisation initiatives may lead to resistance or policy reversals
- **Lack of insurance and risk mitigation tools** that limits private participation
- **Cybersecurity vulnerabilities** in the energy sector, including grid operators and power generation facilities, is increasingly targeted by cyberattacks, especially in the context of ongoing hybrid warfare

ENERGY SECTOR

Highlighted investment projects

POLTAVA REGION

ENERGY, RES (WIND)

DTEK

650 MW DTEK Poltavska Wind Farm

- **Brief Description:** Development and construction of a wind farm project in Poltava region of Ukraine with a total design capacity of 650 MW and expected annual generation of 2.0 TWh.
- **Products/Services:** Electricity generation from renewable sources.
- **Technological Parameters Of The Project:** 650 MW installed capacity expected to generate c. 2 TWh p.a.. Estimated reduction of 2.5 millon tonnes of CO_2 emissions p.a. and restoration of uninterrupted supply for nearly 1 mln households in the region.
- **Project Strengths:**
  - Confirmed wind-speeds of up to 7.5 m/s and a projected capacity factor of 38%;
  - short HV-line connection to substation significantly reduces connection costs;
  - Project design by one of Ukraine's most experienced energy sector investors with proven development and construction experience during the war;
  - Optionality for investors: project can be executed in phases accommodating investor risk appetite.
- **Target Market:** National electricity market.

- **Projects highlights[1], $ mln**

Expected Financial Indicators

CAPEX **~ 1,007.0**	Expected total investment cost **~ 1,157.0**
Debt financing **~ 60-70%**	IRR **depending on financing conditions**
Revenue **~ 220 p.a. on avg**	EBITDA **~ 185 p.a. on avg**

Project Status:

- The project is in the development stage, with some phases already completed: detailed spatial plan, signed grid connection agreement, wind monitoring campaign, monitoring of biodiversity.
- The construction of the Poltavska wind farm is planned to begin during 1H 2026.

BUSINESS MODEL

- Power generation and sale under various commercial agreements, including long-term contracts and in market segments at market prices.

KEY PARTNERS

DTEK is developing the project in close coordination with local and national authorities. Equipment supply will preferably be sourced domestically with some key components coming from international Tier 1 suppliers. DTEK plans to bring international equity co-investors, export credit agencies, and lenders to the project.

KEY POINTS OF PROJECT IMPLEMENTATION

ZAKARPATTIA REGION

ENERGY, RES (WIND)

WIND PARKS OF UKRAINE LLC AND FRIENDLY WIND TECHNOLOGY LLC

Ust' Chorna West Wind Farm

- **Brief Description:** The project aims to strengthen Ukraine's energy security and contribute to post-war economic recovery through the construction of a 176.8 MW wind farm in Ust-Chorna West, Zakarpattia, as part of a planned 1.5 GW wind energy cluster.
- **Products/Services:** The construction of a 176.8 MW wind farm, equipped with 34 modern 5.2 MW wind turbines, will enable the annual production of approximately 554,001 MWh of clean electricity.
- **Technological Parameters Of The Project:** The project will utilise Ukrainian-produced wind turbines supplied by Friendly Wind Technology LLC, incorporating locally manufactured blades and towers. All components comply with modern EU efficiency requirements and grid integration standards.
- **Project Strengths:** This project offers high returns, a short payback period, and contributes to Ukraine's energy independence. Its key differentiator is full-cycle domestic turbine production, which ensures local value creation and enhances supply chain resilience.
- **Target Market:** The target market includes Ukraine's wholesale electricity market, with a particular focus on the bilateral contracts segment involving electricity traders.

Projects highlights[1], $ mln

Financing structure: **CAPEX 100%**

Type of financing: **equity and/or project finance**

Project Status: The project is currently at the feasibility study (FS) stage, with ongoing processes to secure land ownership and lease agreements, and contracted suppliers in place for wind turbines and construction services.

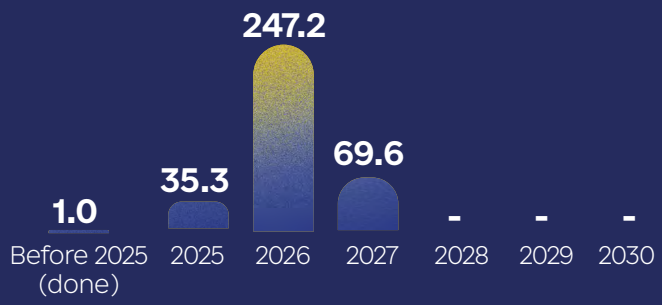

Expected Financial Indicators

NPV **$460.9 mln**	EBITDA (1 year) **$52.1 mln**	Project launch period **2 years**
Revenue (1 year) **$64.2 mln**	IRR **16.8%**	DPP **6.2 years**

BUSINESS MODEL

- We finance and develop wind energy projects up to the ready-to-build, pre-operational, or fully operational stage. These projects — whether individual turbines or complete wind farms — are subsequently sold to investors who benefit from long-term energy sales.
- Depending on the agreement, our group may retain a minority equity stake (e.g. 20–30%) to ensure continued technical involvement, mitigate operational risks, and guarantee stable long-term performance. This co-ownership model promotes long-term alignment between all parties.
- The management company, WPU LLC, also offers long-term technical support, maintenance, and operational services under dedicated service agreements. We remain actively engaged as a trusted local partner throughout the entire project lifecycle.

LVIV REGION

ENERGY, RES (WIND)

EUROCAPE UKRAINE LVIV LLC

Lviv Wind Farm 100 MW

- **Brief Description:** The Lviv Wind Farm (WPP) project with a capacity of 100 MW is currently in an active development stage and plans to obtain a construction permit in Q1 2026.
- **Products/Services:** Production (generation) of energy from renewable sources – wind.
- **Technological Parameters Of The Project:** The project consists of 17 wind turbines with a single installed capacity of 5.9 MW, grouped into 4 clusters and connected to a 35/110 kV project substation, which in turn is connected to the Transmission System Operator network via a 110 kV underground cable line.
- **Project Strengths:** Production of about 300 MWh per year, providing electricity for about 120,000 households and reducing CO2 emissions by 240,000 tonnes per year.
- **Target Market:** National electricity market.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt financing**

Project Status: Pre-RTB.

- **Expected Financial Indicators**

NPV **$35.8 mln**

EBITDA **$23.8 mln**

Project launch period **4.5 years**

Revenue **$31.9 mln**

IRR **12.1%**

DPP **8 years**

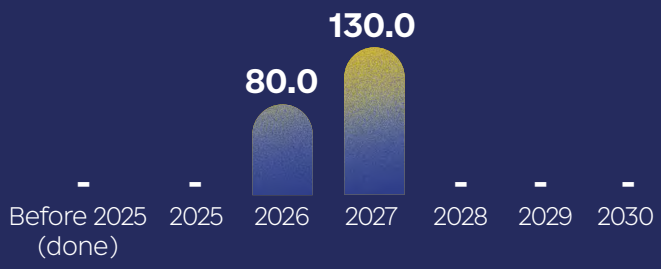

BUSINESS MODEL

- The Wind Farm will produce about 300 MWh per year and distribute it to Off-Taker through the network of the Transmission System Operator NEK Ukrenergo.
- Between Project Company and Off-Taker will be sign the PPA (Power Purchase Agreement).
- The station will be able to supply electricity to about 120,000 households and reduce CO2 emissions by 240,000 tonnes per year.

KEY PARTNERS

The Project belongs to LongWing Energy Group. The Project development done in according to IFC standards, and will be financed by international IFIs, potentially DFC, EBRD, IFC. WTG manufacturer will be chosen at the later stage, currently we are under negotiation with Nordex, Vestas, GE, Enercon.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

KIROVOHRAD REGION

ENERGY, RES (WIND)

ENERGY TRADE GROUP LLC

Wind of Independence: Petrivska WPP (93 MW)

- **Brief Description:** Construction of the wind farm - total capacity 93 MW (circa 15 WTG units). Project SPV participants: LLC "ETG Winpark 1" – 18.6 MW; LLC "ETG Windpark 2" – 18.6 MW; LLC "ETG Windpark 4" – 55.8 MW. In 2025,1st stage – 18.6 MW is already financed and construction commenced (in 2026 will be operational). The financing is required for 2 and 3 stages for 74.4 MW.
- **Products/Services:** Electricity generation for own portfolio of 6500 business clients on corporate PPA.
- **Technological Parameters Of The Project:** Green energy production with planned volumes of 315,000.0 MWh per year.
- **Project Strengths:** Aligned with global sustainable development standards and green transition initiatives. Aims to reduce CO2 emissions and offers potential for export to the EU.
- **Target Market:** Supply for own portfolio (6500 of SME customers) of more than 350,000.0 MWh per year by own electricity generation.

- **Projects highlights[1] for 74.4 MW, $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt, equity**

Project Status: Ready for implementation, including ownership of land, completed feasibility study, obtained technical connection approvals, conducted environmental impact assessment, "ready to build" stage. Phase 1 – 18.6MW already under construction with Vestas A/S wind turbines. Phase 2 and 3 total capacity 74.4 MW "ready to build" require financing for implementation.

- **Expected Financial Indicators**

NPV (8 years) **$20.4 mln**

EBITDA (annually) **$30.0 mln**

Project launch period **2027**

Revenue (annually) **$31.9 mln**

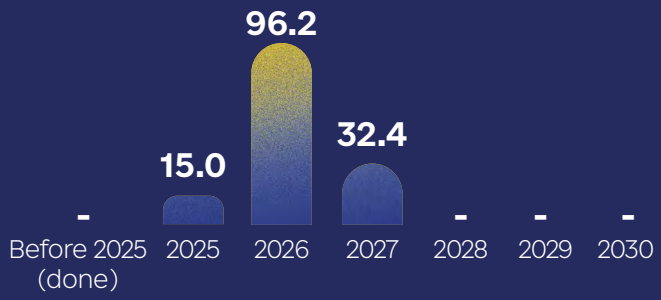

IRR **14%**

DPP **7.1 years**

BUSINESS MODEL

- The project will be implemented in 2 phases: the first phase involves constructing and commissioning a 93 MW wind farm in 2025-2027, while the second stage involves constructing and commissioning a 100 MW wind farm in 2026-2028.
- The total capacity of the wind farm is planned to be 193 MW, generating 630 000 MWh of green energy and reducing CO2 emissions by 600 000 tonnes annually.
- In 2022, the preparation activities for the first stage - the 93 MW wind farm including 15 wind turbines from the manufacturer Vestas A/s with an electricity production capacity of 315 000 MWh annually - have commenced.
- In 2025 the construction of 1 stage with capacity 18,6 MW of the Project 93 MW began, which is expected to become operational in 2026.

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

Vestas Wind System – equipment, Katzenbach Ingenieure – design, ProfECVentus GmbH – wind assessment, UGB under support of EBRD, IFC – financing for 1 stage 18.6 MW.

Energy Trade Group LLC is a Ukrainian independent energy trader and retail provider. The company supplies gas and electricity to large and medium-sized businesses (more than 6 500 clients) with the secured portfolio of offtake clients on long-term corporate PPA: 2025 – 356 000 MW, 2026 – 396 700 MW, 2027 – 441 700 MW, 2028 – 486 700 MW, 2029 – 531 700 MW, 2030 – 576 700 MW.

ENERGY, RES (WIND)

KILIYA WIND POWER PLANT LLC

Danube Spring (53.1 MW)

- **Brief Description:** Wind Power Plant located in Odesa region (Kiliya and Artcyz villages) with a capacity of 53.1 MW. RTB stage in Q3'2025. Up to 190 GWh annual energy production.
- **Products/Services:** Green energy production with further supply to open market (DAM, bilateral contracts, end consumer, CFD, etc.).
- **Technological Parameters Of The Project:** Wind turbines from leading EU vendors, BESS installation in the future.
- **Project Strengths:** RTB stage in Q3'2025, "affordable scale of the project", experienced operator with in-house commercial infrastructure.
- **Target Market:** Ukrainian power market, export to ENTSO-e countries.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt financing** (MFIs, commercial banks)

Project Status: Finalizing RTB stage – project design, turbine & contractors selection.

- **Expected Financial Indicators**

EBITDA (2nd year) **$13.8 mln**

IRR **15%+**

Project launch period **1.5 years**

Revenue (2nd year) **$18.5 mln**

DPP **7 years**

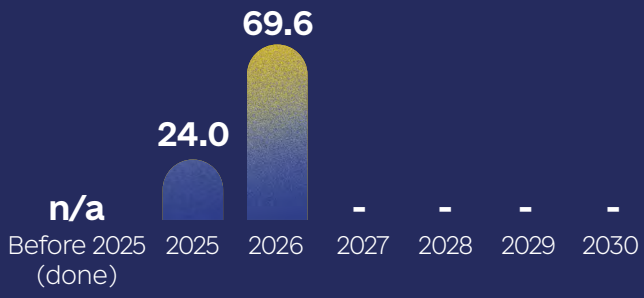

BUSINESS MODEL

- The "Danube Spring" wind farm project by Elementum Energy, Ukraine's largest foreign renewable energy investor, is set to reach RTB stage in Q3 2025, featuring a stable operational model, strong local partnerships, and guaranteed revenue streams.

KEY PARTNERS

European suppliers of wind turbines, installation companies and logistics service providers. Potential financing from IFIs.

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

Backed by Ukraine's leading foreign investor in renewable energy, the "Danube Spring" wind farm is expected to reach the Ready-to-Build phase in Q3 2025, offering attractive incentives including streamlined permitting, access to infrastructure, state support programmes, and predictable income through renewable energy frameworks.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

RIVNE REGION

ENERGY, RES (WIND)

MCL GROUP LLC

Wind power plant "Volodymyrets" (72 MW)

- **Brief Description:** Construction of an industrial-scale wind farm with a total capacity of 72 MW (including circa 12 units with up to 6 MW capacity each).
- **Products/Services:** Electricity generation.
- **Technological Parameters Of The Project:** Green electricity production with planned volumes of more than 240,000.0 MWh per year and reduction of CO2 emissions by 108 thousand tonnes per year.
- **Project Strengths:** Independent energy generation, an intention from the consumer to directly purchase electricity, the possibility of expanding the project to 144 MW of wind generation only (+72 MW second wind phase) or 100 MW of hybrid plant (+30 MW second solar phase).
- **Target Market:** Ukrainian power system (expected tariff 0.091 $/kWh) with possibility to export to EU (130 km to EU border).

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **project financing**

Project Status: Final stage of development (including existing land lease agreements, completed approval process, environmental permits, etc).

BUSINESS MODEL

- Ekokray SPP is a flagship project featuring SPP combined with a BESS. The integration with BESS enables not only the sale of green electricity but also participation in balancing services, enhancing both profitability and grid reliability.

KEY PARTNERS

Include equipmentand technology suppliers, financial institutions, grid operators, legal advisors, and energy off-takers, all collaborating to ensure efficient development, financing, and operation of solar and BESS projects.

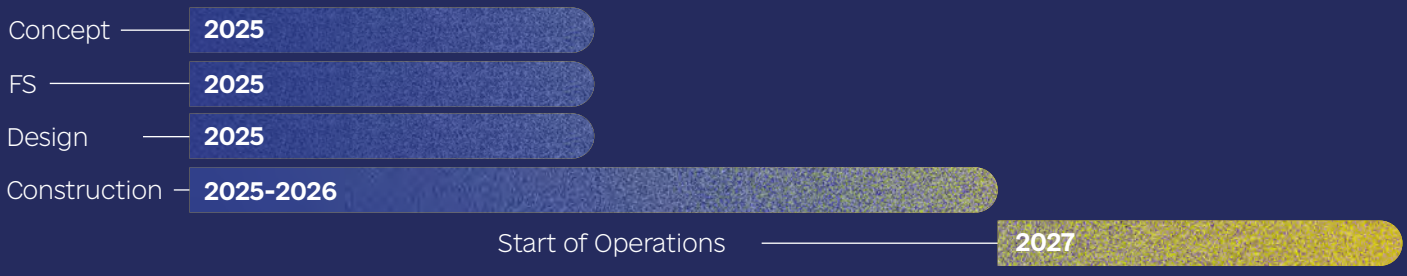

INCENTIVES

Revenue from balancing services via its integrated BESS, reduced curtailment risk, and eligibility for green certificates and international climate finance.

The 2 MW BESS **earns revenue by providing fast-response ancillary services** like FCR and aFRR to stabilize the grid, supported by special auctions.

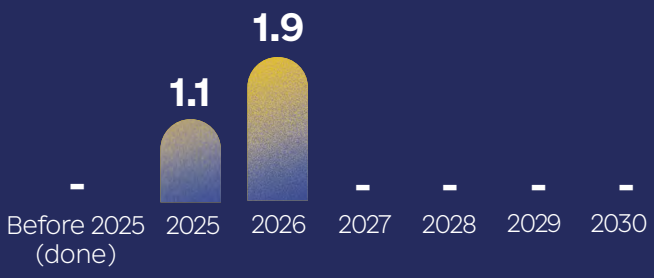

KEY PARTNERS

Grid operators, equipment suppliers, and regulatory bodies are essential partners for project implementation and market participation.

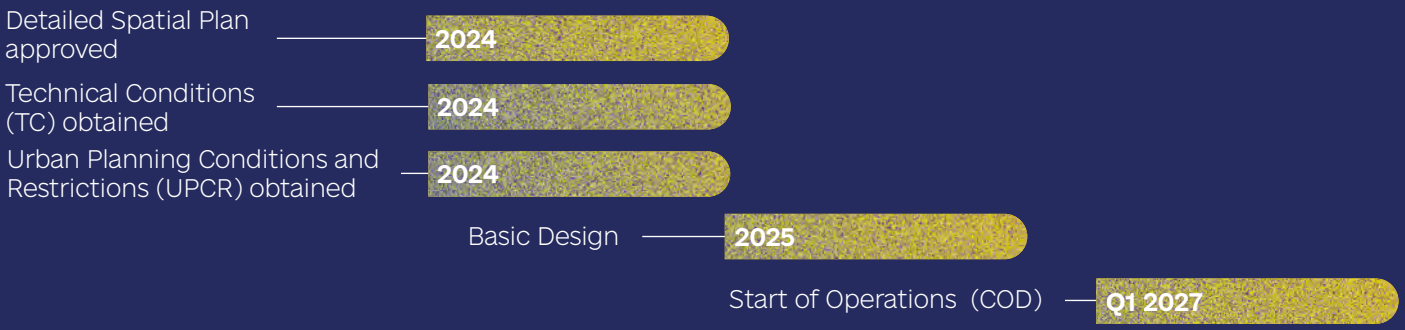

INCENTIVES

Favorable regulatory changes and dedicated auctions for ancillary services create attractive investment conditions for energy storage in Ukraine.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION (Construction Period 1.2 years)*

[1] - The project information and financial indicators are provided by company-initiator of the project.

* - The Project timeline is indicative and depends on the investor's entry date. For illustrative purposes, the schedule assumes project launch in 2025, with COD achievable within the planned construction period.

KIROVOHRAD REGION

ENERGY, ENERGY STORAGE SYSTEMS

INNOVATION LAW LABORATORY LLC

Renewable Energy Backbone: Kirovohrad AI-Powered, Nanotech-Enabled Microgrids for Critical Infrastructure

- **Brief Description**: Implementation of Ukraine's first AI-governed clean energy microgrid – a pioneering system that integrates femtosecond-laser-enhanced solar PV, real-time AI optimisation, and a zero-upfront Energy-as-a-Service and Battery-as-a-Service (EaaS/BaaS) model tailored for post-conflict recovery zones.
- **Products/Services:** An AI-governed microgrid delivering clean power to critical infrastructure through femtosecond-laser-enhanced solar PV, modular energy storage, AI-driven forecasting and optimisation, and a zero-upfront EaaS/BaaS model.
- **Technological Parameters Of The Project:** Total capacity of 2 MW solar and 3.5 MWh storage, featuring femtosecond-laser-treated "black silicon" PV, AI-based forecasting with a 35–40% improvement in solar prediction accuracy, and a modular architecture for rapid deployment and scalability.
- **Project strengths:** A unique AI-optimised, nanotech-enhanced microgrid delivering high-efficiency, resilient, and rapidly deployable clean energy for critical infrastructure in post-conflict zones. Implemented in cooperation with the John Pontin Trust, Cranfield University, Open Climate Fix, IKNET, and Energy Act for Ukraine.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX – 85%
OPEX – 15%

Type of financing:
debt (IFIs, commercial banks), equity

Project Status: FS/Pre-FS.

- **Expected Financial Indicators**

NPV	Revenue	Project launch period
$4.5 mln	**$1.2 mln**	**2 years**
EBITDA	**IRR**	**DPP**
$0.5 mln	**14%**	**5.5 years**

- **Target Market:** National electricity market.

BUSINESS MODEL

This approximately 2 MW solar plus 3–4 MWh storage microgrid delivers stable revenue streams through Energy-as-a-Service contracts for critical infrastructure, healthcare facilities, and utilities. It also provides grid balancing and optimisation services. The AI-powered system enables real-time forecasting, supports multiple daily storage cycles, and maximises energy efficiency – reducing costs for end-users and enhancing resilience during grid disruptions.

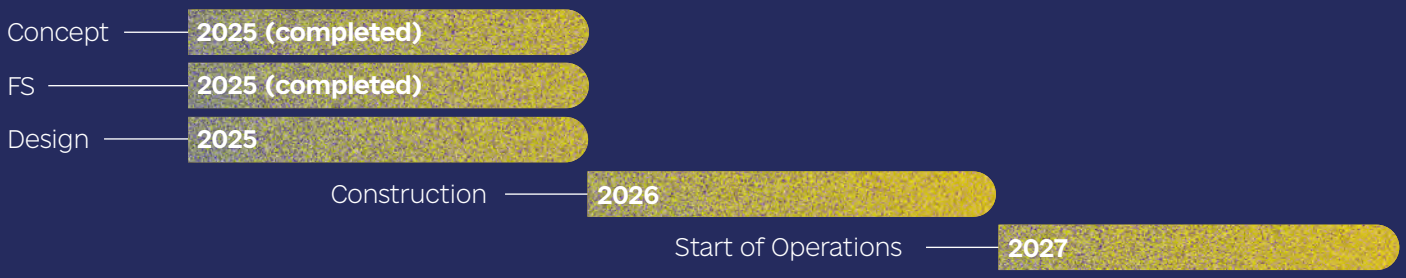

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project benefits from Ukraine's 2025 energy market reform, which legalises decentralised EaaS/BaaS models, aligns with EU energy regulations, and grants priority status under post-war reconstruction programmes. Additional incentives include emerging capacity markets, frequency regulation services, and access to international climate and development finance.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] - The project information and financial indicators are provided by company-initiator of the project.

ENERGY, RES (HYDROPOWER)

UKRHYDROENERGO PJSC [SOE]

CHERKASY REGION

Construction of Kaniv Pumped Storage Power Plant

The project is available in Single Project Pipeline

- **Brief Description**: A new 1,000 MW pumped storage facility designed to enhance Ukraine's grid flexibility, support the integration of renewable energy sources, and strengthen overall energy security.
- **Products/Services:** Provides 1,000 MW of flexible generation capacity. The facility is expected to deliver approximately 1,038 GWh of electricity annually to cover peak demand and stabilise the power grid.
- **Technological Parameters Of The Project:** Equipped with reversible hydro units featuring advanced automation systems. The design is fully compliant with EU standards and supports the development of green, resilient energy infrastructure.
- **Project strengths:** Strategically critical for Ukraine's energy transition, the project enhances ENTSO-E synchronisation and supports both the decarbonisation and decentralisation of electricity generation.
- **Target Market:** Ukrenergo (the transmission system operator), the balancing market, renewable energy developers, and participants in cross-border energy trade.

- **Projects highlights[1], $ mln**

Required financing **1,979** | **1,979** Total budget

Financing structure: **CAPEX – 100%**

Type of financing: **credit, owned funds**

Project Status: The technical and economic justification has been completed, the project design stage has been approved by CMU Order No. 1050-r, and work is currently underway to update and modernise the design solutions.

- **Expected Financial Indicators**

NPV	Revenue	Project launch period
$1,917 mln	**on request**	**5 years**
Payback period	**IRR**	**DPP**
17 years	**6.4%**	**19.8 years**

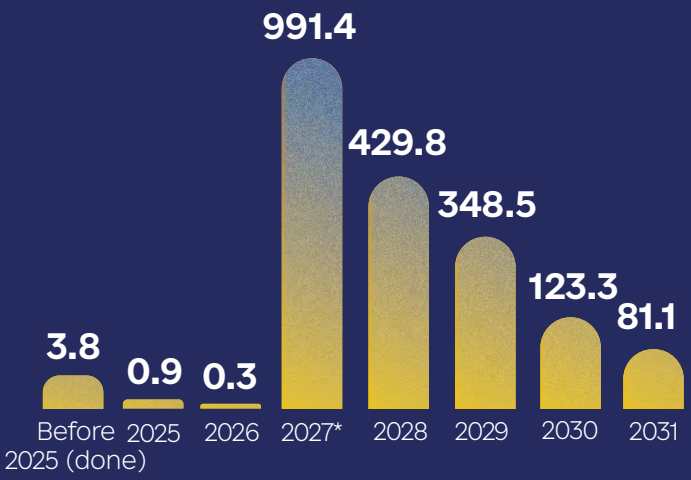

BUSINESS MODEL

Ukrhydroenergo PJSC will operate the Kaniv Pumped Storage Power Plant, generating revenue by providing balancing services and flexibility to the Ukrainian grid—primarily through frequency control and balancing market mechanisms—as required by Ukrenergo and market operators.

KEY PARTNERS

- **Design & Engineering:** Ukrhydroproject PJSC;
- **Technology Suppliers:** Leading EU-based manufacturers of reversible turbines and control systems;
- **Financing Partners:** International financial institutions, including IBRD, EIB, EBRD, and KfW;
- **Consumers:** Ukrenergo (TSO), balancing market operators.

INVESTMENTS IN THE PROJECT, $ MLN

* Provided that funding is secured in 2027

KEY POINTS OF PROJECT IMPLEMENTATION

UKRAINE

ENERGY, BIOENERGY / BIOMASS ENERGY

NOONE4U EUROPE AB & THE OAKTREE PLATFORM INC.

The Oaktree Ukraine

- **Brief Description**: Build, own, and operate biomass and MSW-based, tailor-made biochar plants for energy generation, water treatment, and commercial CO_2 production for food systems and industrial decarbonisation.
- **Products/Services:** Tailor-made biochar for industry, agriculture, energy, water treatment, and commercial CO_2 for year-round food production.
- **Technological Parameters Of The Project:** Carbon Capture & Utilisation – biomass and waste conversion into tailor-made biochar for soil enhancement and industrial applications. The project will produce **106,000 tonnes of biochar** and **20,000 tonnes of granular activated carbon** for water purification. Additionally, it will generate **25 MW of energy** and **100,000 tonnes of commercial CO_2**.
- **Project strengths:** The project addresses urgent reconstruction needs while modernising Ukraine's energy system in line with the latest zero-emission, zero-waste renewable energy standards and advancing a circular, resilient, and self-sustaining economy. It replaces legacy energy infrastructure and complements Ukraine's decentralised energy policy. **At least 1,200 direct jobs will be created**.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX – 70%
OPEX – 30%

Type of financing:
project finance

Project Status: Under development since 2024, ready for implementation 2025.

- **Expected Financial Indicators**

NPV	Revenue	Project launch period
$560.0 mln	**$80.0 mln**	**2 years**
EBITDA	**IRR**	**DPP**
$50.0 mln	**19.0%**	**5.5 years**

- **Target Market:** Domestic electricity, district heating, food supply, water treatment, industrial decarbonisation, and improved efficiency.

BUSINESS MODEL

Each project converts biomass and sorted MSW fractions into biochar, activated carbon, energy, commercial CO_2, and food production. Revenue streams include the sale of electricity and energy (heat, cooling, steam), soil improvement, industrial CO_2 avoidance and process optimisation, water purification as a service, toxin-free produce and greens, and more.

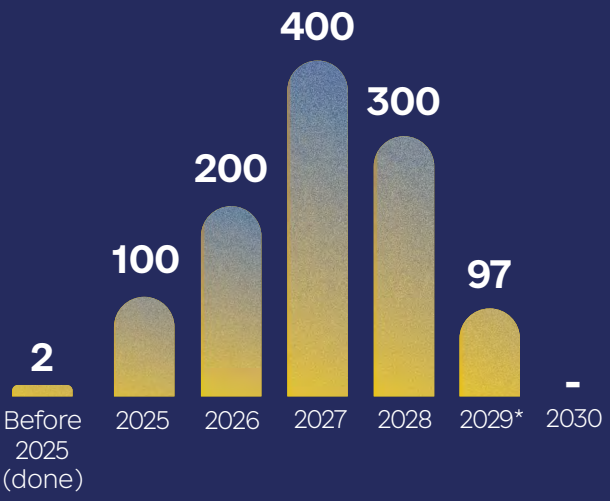

KEY PARTNERS

Municipalities, government, industry, utilities, and technology providers.

INCENTIVES

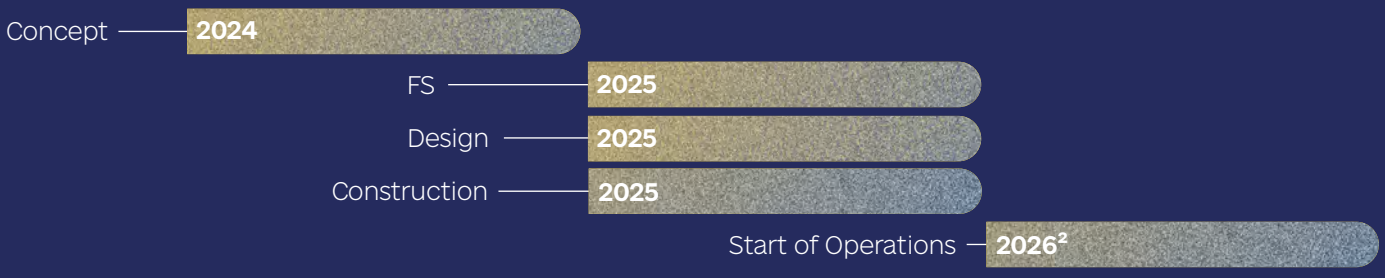

The project benefits from renewable energy subsidies, environmental grants for sustainable waste management, and incentives for carbon capture and utilisation.

INVESTMENTS IN THE PROJECT, $ MLN

* Current investment horizon approved

KEY POINTS OF PROJECT IMPLEMENTATION

[2] – First project site.

KYIV REGION

ENERGY, BIOFUEL

PRO-ENERGY LLC

Biomethane complex with CO_2 capture

- **Brief Description**: The project involves construction of a large-scale biomethane and liquefied CO_2 production plant in Semypolky, Kyiv region, Ukraine.
- **Products/Services:** The plant will produce **up to 5,6 mmcma** of biomethane and **circa 9 thousand tonnes per year of liquefied CO_2** using organic waste and energy crops. The biomethane will be injected into the gas grid and exported to the EU.
- **Technological Parameters Of The Project:** The project uses Dutch anaerobic digestion (Host) and membrane upgrading with CO_2 liquefaction (Bright Biomethane). **Technologies meet** advanced **EU environmental** and **energy efficiency standards**.
- **Project strengths:** Strong EU technology partners, secured feedstock and permits, and alignment with EU green energy policies ensure high investment potential. Approximately 75% of total CAPEX is allocated to state-of-the-art equipment, ensuring operational reliability and long-term efficiency.
- **Target Market:** The primary market includes EU buyers of biomethane and liquefied CO_2 under REPowerEU. Key customers are energy traders and industrial off-takers in need of green gas and CO_2.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX – 100%**

Type of financing: **equity financing (capital entry)**

Project Status: Ready for implementation.

- **Expected Financial Indicators**

NPV **$6.5 mln**	Revenue (2nd year) **$8.0 mln**	Project launch period **1 year**
EBITDA (2nd year) **$3.9 mln**	IRR **26%**	DPP **5 years**

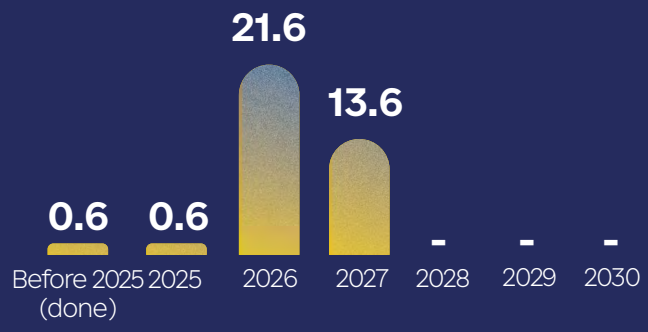

BUSINESS MODEL

The project generates revenue from the sale of biomethane injected into the gas grid and liquefied CO2. Feedstock is sourced from secured local suppliers. The output is exported under long-term offtake agreements to EU buyers.

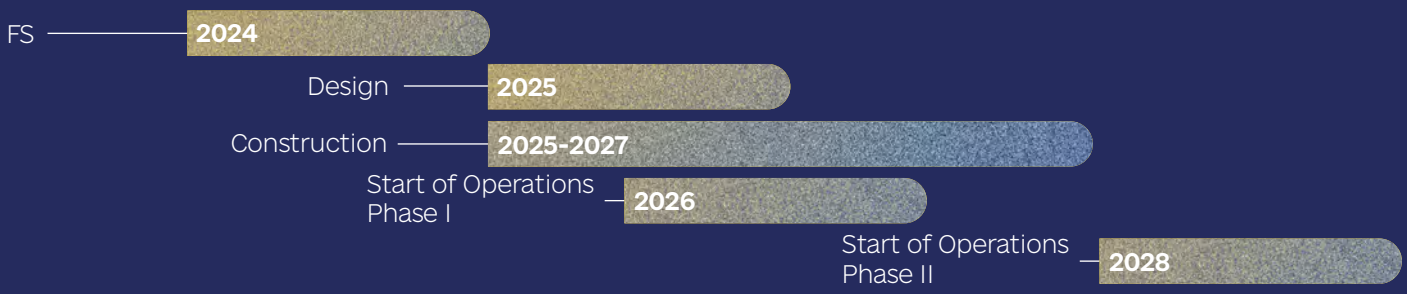

KEY PARTNERS

Technology suppliers: Host Biogas (Netherlands) - anaerobic digestion; Bright Renewables (Netherlands) - membrane upgrading and CO2 liquefaction. Engineering partner: Pro-Energy.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

KIROVOHRAD REGION

ENERGY, BIOFUEL

AGROVISTA LLC

Biomethane production plant

- **Brief Description**: The project involves the creation of a high-tech biogas complex based on the agro-industrial assets of the Oleksandriia district, Kirovohrad region.
- **Products/Services:** Biogas.
- **Technological Parameters Of The Project:** Annual capacity of **24 million m³ of biogas per year**, containing from 4.5 to 9 million m³ of biomethane - equivalent to **129 thousand MWh of renewable energy**.
- **Project strengths:** The project meets sustainable development goals, contributes to energy decentralisation, reduces greenhouse gas emissions, and increases energy security.
- **Target Market:** Domestic and European markets.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX – 80%
OPEX – 20%

Type of financing:
debt, project and equity financing

Project Status: Completion of Pre-Feasibility phase.

- **Expected Financial Indicators**

NPV **$30.0 mln**	Revenue (3rd year) **$8.5 mln**	Project launch period **2.5 years**
EBITDA (3rd year) **$3.3 mln**	IRR **11%**	DPP **8.5 years**

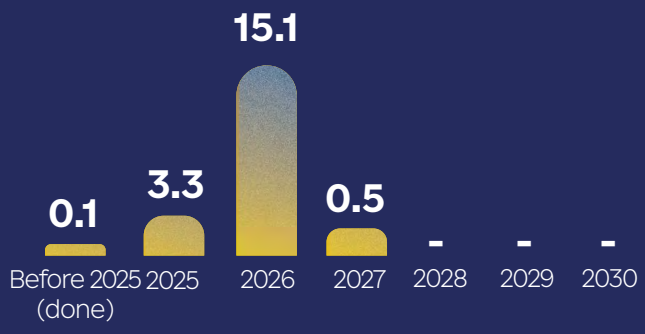

BUSINESS MODEL

The economic efficiency of the project is confirmed by the high level of fossil fuel substitution, the sale of excess electricity on the day-ahead market, and the possibility of exporting biomethane.

KEY PARTNERS

Local agricultural producers, biogas technology suppliers, construction and engineering firms, utility companies, financial institutions, and regional authorities supporting sustainable energy development.

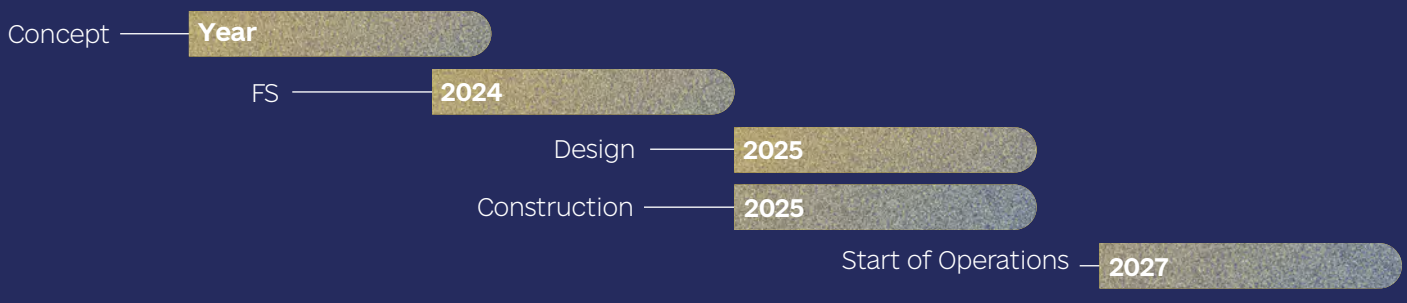

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project is designed as a platform model with the possibility of expansion to other locations, integration of agricultural enterprises, and installation of additional biomethane modules.

KEY POINTS OF PROJECT IMPLEMENTATION

LADYZHYNSKE, VINNYTSIA REGION

ENERGY, BIOFUEL, COGENERATION

MHP PJSC

Sunflower husk cogeneration 10 MWh

- **Brief Description**: Energy safety. The construction of cogeneration complex will allow to **generate ~75,000 MWh of electricity per year** from alternative energy sources.
- **Products/Services:** Electricity.
- **Technological Parameters Of The Project:** Sunflower husk →10 WMh steam turbine generator → electricity.
- **Unique Selling Proposition:** We have **own sunflower husk for cogeneration** from our oil press plant which we export nowadays.
- **Target Market:** Ukraine energy system by using "day- ahead" market, the intraday market and the balancing market.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX – 100%
OPEX – 0%

Type of financing:
equity / project financing

Project Status: Feasibility approved. Current stage – pre-project decisions and determination of necessary equipment. Available land plot for construction with communications.

- **Expected Financial Indicators**

NPV (10 years)
$0.3 mln

Revenue (2028 year)
$9.0 mln

Project launch period
1.7 years

EBITDA (2028 year)
$4.6 mln

IRR
16.8%

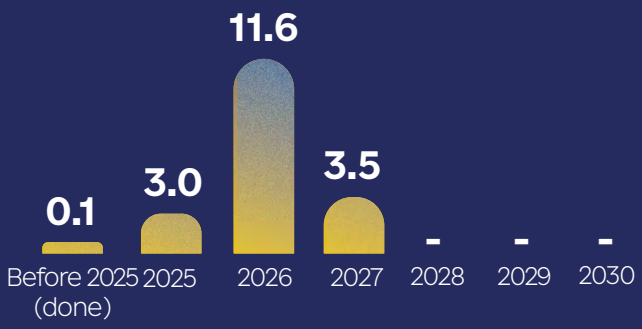

DPP
8.9 years

BUSINESS MODEL

The company has its own sunflower husk sourced from its oil pressing plant, which will be used in a cogeneration process instead of being sold. Average annual volume from this location:

- Current (as is): sunflower husk – 51,000 metric tonnes;
- Projected (to be): useful electricity – 75,000 MWh per year.

INVESTMENTS IN THE PROJECT, $ MLN

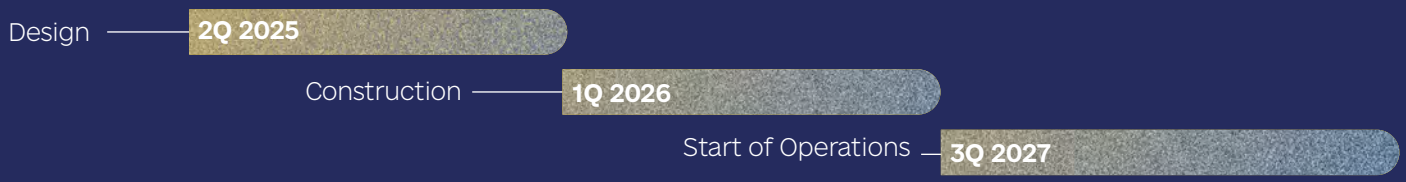

KEY PARTNERS

Electricity buyers within the Ukrainian energy system, operating through the day-ahead market, intraday market, and balancing market.

INCENTIVES

0% customs duties on the import of new equipment, compensation for the costs of connection to engineering infrastructure, exemption from corporate income tax, and other benefits in accordance with the Law of Ukraine "On State Support for Investment Projects with Significant Investments in Ukraine".

KEY POINTS OF PROJECT IMPLEMENTATION

[1] - The project information and financial indicators are provided by company-initiator of the project.

VINNYTSIA REGION

ENERGY, BIOFUEL

LVN LIMITED LLC

Biogas production project from by-products and waste of the alcohol production plant

- **Brief Description**: Development of a biogas/biomethane facility using distillery residues (bard) and agricultural waste (manure, straw). The aim is to ensure energy independence of the Extra Neutral Alcohol (ENA) production unit, reduce waste, and generate renewable energy and fertilisers.
- **Products/Services:** Biogas or biomethane, Bio LNG, and certified organic fertilisers derived from digestate.
- **Technological Parameters Of The Project:** Advanced anaerobic digestion of bard and agro-waste, producing **7.7–10.0 million m^3 CH_4 per year**. Focus on modular, efficient, and ESG-compliant design.
- **Project Strengths:** Enables full gas substitution for thermal needs, eliminates organic waste, and cuts greenhouse gas emissions.
- **Target Market:** Use of biogas/biomethane for internal heating or grid injection; **export potential to the EU**. CO_2 and digestate sold to industrial and agro clients.

- **Projects highlights[1], $ mln**

Required financing **8.5** | **16.3** Total budget

Financing structure:
CAPEX – 85%
OPEX – 25%

Type of financing:
project finance

Project Status: Company has received a grant $1.5 million from Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH for the development of design documentation for the construction of a biogas plant. Project design documentation has been developed. Shovel Ready.

- **Expected Financial Indicators**

NPV (10 years) **$15.9 mln**	Revenue (3rd year) **$6.7 mln**	Project launch period **2.5 years**
EBITDA (3rd year) **$5.1 mln**	IRR **22%**	DPP **3.8 years**

BUSINESS MODEL

The project generates revenue by upgrading biogas from agricultural and distillery waste into biomethane for injection into the gas grid, with additional income from digestate fertiliser and CO_2 utilisation. The model is based on waste-to-energy, green fuel sales, and potential carbon credits.

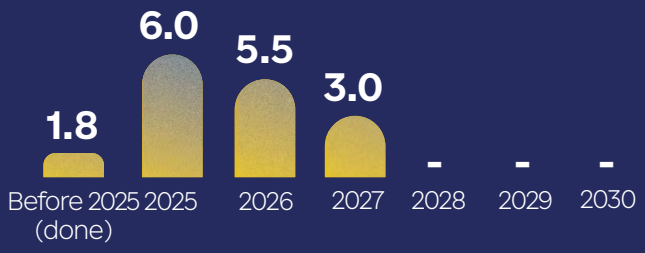

KEY PARTNERS

GIZ provides technical and grant support; Ellmann Engineering GmbH and Wolf supply technology and biogas plant solutions; FUIB is engaged as a financial partner; local agri-holdings supply feedstock, and the regional gas operator ensures biomethane off-take.

KEY POINTS OF PROJECT IMPLEMENTATION

- Concept — 2021
- FS — 2022-2023
- Design — 2024-2025
- Construction — 2025-2026
- Start of Operations — 2027

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project is located in a rural development zone and qualifies for green energy incentives, potential carbon credit schemes, and donor co-financing under international technical assistance.

MYKOLAIV REGION

ENERGY, BIOFUEL, COGENERATION

SOUTH UKRAINIAN BIOFUEL COMPANY PE

Cogeneration plant using agropellets

- **Brief Description**: The agropellet producer intends to produce electricity and heat energy based on a cogeneration plant using agropellets.
- **Products/Services:** Generation of electricity and heat through combustion of biofuel.
- **Technological Parameters Of The Project:** The planned annual design output capacity is: **3,600 MW of electricity** and **12 Gcal of thermal energy**.
- **Project Strengths:** Vertical integration with a biofuel producer, convenient logistics, support for the green course.
- **Target Market:** National electricity market, local heat consumer.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX – 100%
OPEX - 0%

Type of financing:
project finance

Project Status: Concept stage.

- **Expected Financial Indicators**

NPV **$1.3 mln**	Revenue **on request**	Project launch period **2 years**
EBITDA (annually) **$0.7 mln**	IRR **15.9%**	DPP **8.9 years**

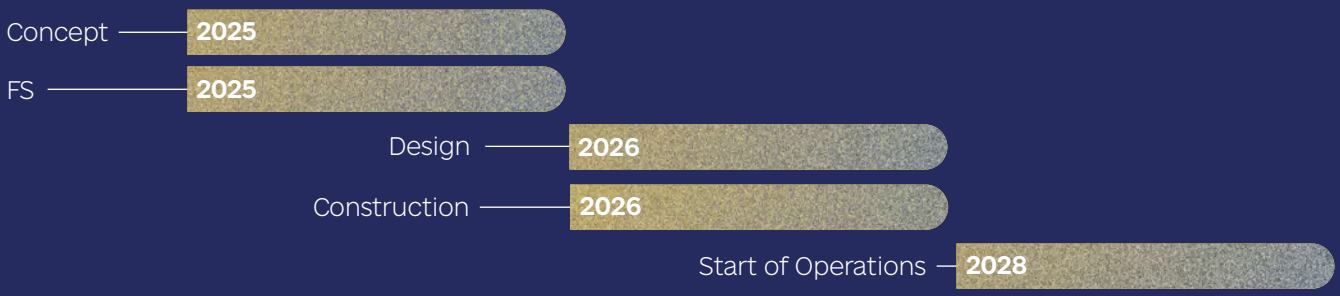

BUSINESS MODEL

The agropellet producer's business model is based on using in-house agropellets to fuel a cogeneration (CHP) plant that simultaneously produces electricity and heat. Revenue is generated through the sale of electricity to the grid or local users, supply of heat to nearby facilities, and potential income from carbon credits or renewable energy incentives.

KEY PARTNERS

Agricultural suppliers for biomass feedstock, technology providers for cogeneration equipment, energy distributors, maintenance service companies, and local government agencies supporting renewable energy projects.

KEY POINTS OF PROJECT IMPLEMENTATION

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The facilities of South Ukrainian Biofuel Company PE are located on the territory of the "Voznesensk Techno Park" Industrial Park (formed in October 2025). Government offers 10 years of income tax exemption, VAT and import duty exemption for new equipment.

[1] - The project information and financial indicators are provided by company-initiator of the project.

ENERGY, HIGHLY FLEXIBLE GENERATION

UKRNAFTA PJSC (NAFTOGAZ GROUP) [SOE]

Power Generation

Brief Description:

- During the ongoing russian aggression, Ukraine has lost approximately 8.2 GW of power generation capacity.
- Ukraine's daily average power deficit during coldest days of the nearest heating season in the worst-case destruction scenario is 6.5 GW.
- 1.7 GW of total capacity deficit can be covered by drawing power from neighboring countries to the West through current interconnectors, but there's a need for additional ~4.8 GW of actual generation capacities to cover remaining deficit.
- To solve this problem, Ukrnafta plans to build electricity and heat generation capacities capable of providing electricity and heating for both the Company's production assets and local communities.

Projects highlights[1]

CAPEX: **$522.6 mln**

Financing structure: **CAPEX 100%**

Type of financing: The main share of funding is planned to be attracted from international financial institutions and donor organizations.

Project	Location[2]	Q1 2026	Q2 2026	Q3 2026	Q4 2026	CapEx, $ mln
Engine power plants	Location 1	**30 MW**				**162.2**
	Location 2	**20 MW**				
	Location 3	**20 MW**				
	16 own production sites	**56 MW**

TEPLOKOMUNENERGO ME

Construction of a highly manoeuvrable 50 MWe cogeneration facility in Chernihiv

- **Brief Description:** Construction of a highly manoeuvrable 50 MW gas piston generator complex at Chernihiv CHPP to enhance operational efficiency and financial performance, supported by grant funding or technical assistance.
- **Technological Parameters Of The Project:** Utilises a 50 MW complex at Chernihiv CHPP (5 generation units ~10 MWe each).
- **Project Strengths:** Utilises a 50 MW gas piston generator complex at Chernihiv CHPP for efficient and flexible electricity generation, and lower maintenance costs.
- **Target Market:** National electricity market and local heat consumers.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 70%
OPEX 30%

Type of financing:
debt financing

Project Status: The project has undergone a Pre-Feasibility Study (Pre-FS) and will proceed to a full Feasibility Study (FS).

- **Expected Financial Indicators**

NPV (27 years) **$2.6 mln**	EBITDA (2029) **$4.1 mln**	Project launch period **2 years**
Revenue (2029) **$4.2 mln**	IRR **9.1%**	DPP **8 years**

BUSINESS MODEL

- The proposed technical solutions demonstrate increasing efficiency with capacity.
- For example, electric efficiency ranges from 40% for 1 MW installations to 47.1% for 5 MW units.
- The proposal features a 50 MW cogeneration complex equipped with high-efficiency units for flexible electricity and thermal energy generation, ensuring rapid load adjustments to meet network requirements.

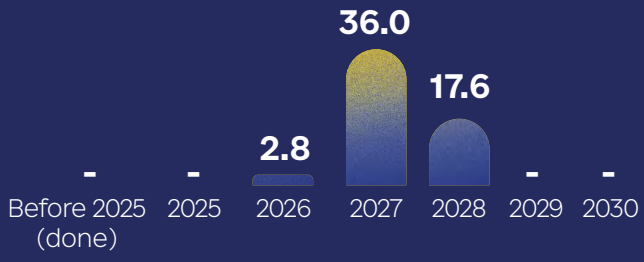

KEY PARTNERS

Wärtsilä, Caterpillar Group, and INNIO Jenbacher – equipment suppliers.

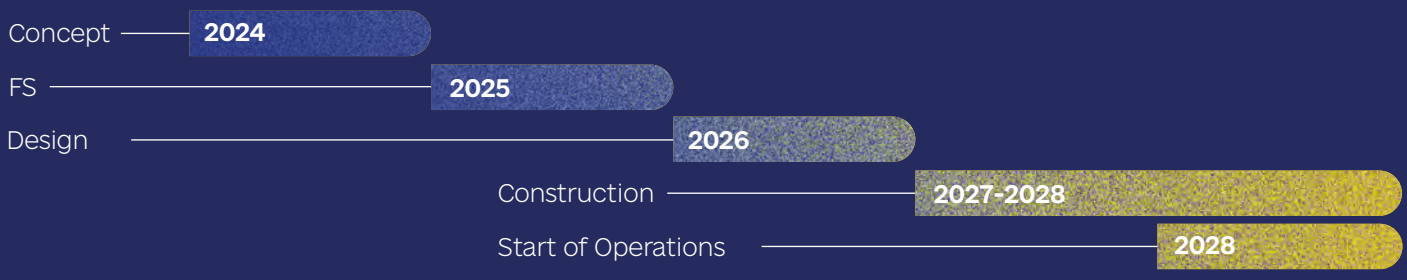

INCENTIVES

Favourable regulatory changes and dedicated auctions for ancillary services are creating attractive investment conditions for energy storage in Ukraine.

KOVEL,
VOLYN REGION

ENERGY, HIGHLY FLEXIBLE GENERATION

TRANSGASINDUSTRY AG

Construction of a decentralised gas-fired power generation network in Ukraine (1-st stage)

- **Brief Description:** Company, a reputable natural gas trader with a direct connection point to the Gas Transmission System of Ukraine (GTS) and the on-site gas compression infrastructure, is developing a 20-mW gas-fired electricity generation network to cover the growing demand for sustainable electricity supply in the region.
- **Products/Services:** Energy-as-a-Service model (EaaS), company owns, installs, operates, and maintains the gas-fired generation equipment, while the customer pays for the energy output and the service. Company covers all CapEx and OpEx related to the gas generators for the client.
- **Technological Parameters Of The Project:** Decentralised network of up to 20 MW of gas-fired generators from top-tier manufacturers, with average output of 1-3 MW each.
- **Project Strengths:** Direct GTS connection point unlocks sustainable natural gas supply with discount (no transportation fees), 20 years of industry expertise.
- **Target Market:** Local electricity consumers, such as businesses with medium to large-scale energy usage.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 85%
OPEX 15%

Type of financing:
equity (entry into the share)

Project Status: Pre-feasibility study completed. Company has all required infrastructure and capabilities for project implementation. The project was reviewed and approved by a leading Ukrainian private investment fund. Investment is on hold due to uncertainty of international partners regarding ESG compliance.

- **Expected Financial Indicators**

NPV (5 years)
$8.8 mln

EBITDA (2026)
$6.4 mln

Project launch period
1 year

Gross Revenue (2026)
$20.7 mln

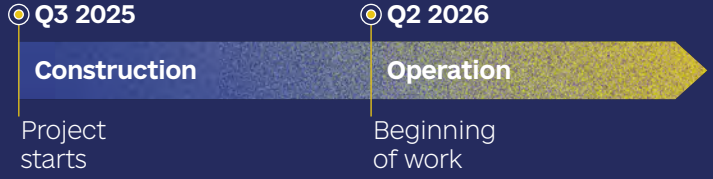

IRR
~30%

DPP
4.1 years

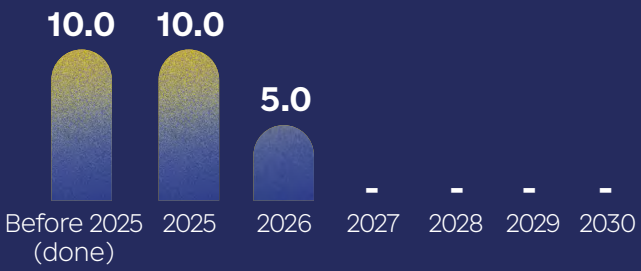

BUSINESS MODEL

- Two primary scenarios are proposed, which can be integrated.
- The first entails installing ~10 generating units with average 1-3 MW output under EaaS model, leading to a complete customer's shift to electricity consumption from this source. In this case, direct gas supply to clients might be considered leveraging high-pressure tank trucks to utilise gas price advantages.
- The second scenario involves construction of 20 MW generation facilities at the company's site near the GTS and directly selling the generated electricity on the Day Forward electricity market. This approach significantly reduces operational risks and simplify execution.

KEY POINTS OF PROJECT IMPLEMENTATION

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

Leading global manufacturers of gas generation equipment with a diversified list of local dealers, gas traders, Naftogaz.

Scenario 1:

~10 EaaS clients, 1-3 MW each

Scenario 2:

20 MW on-site generation

[1] The project information and financial indicators are provided by company-initiator of the project.

ZAKARPATTIA REGION

ENERGY, HIGHLY FLEXIBLE GENERATION

ZAKHIDUKRGEOLOGIYA SE [SOE]

RestartUA Power:
Manoeuvrable Sources of Thermal and Electrical Energy

- **Brief Description:** Use of the geothermal potential of Transcarpathia to create manoeuvrable sources of thermal and electrical energy.
- **Products/Services:** Generation of electricity and heat from thermal energy.
- **Technological Parameters Of The Project:** Following the implementation of the first phase, the project is expected to achieve an annual thermal energy generation capacity of up to 30 MW.
- **Project Strengths:** Reducing dependence on imported gas, increasing the resilience of the energy system, and creating a stable energy source.
- **Target Market:** Local electricity and heat consumer, including critical infrastructure facilities.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 85%
OPEX 15%

Type of financing:
project finance

Project Status: Concept.

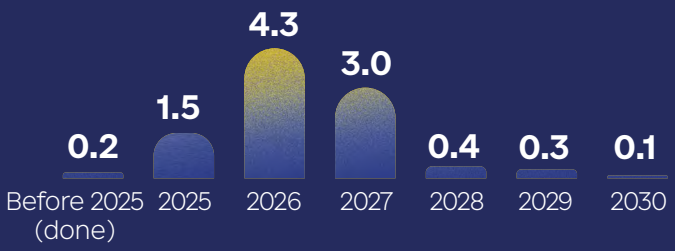

- **Expected Financial Indicators**

NPV **$8.2 mln**	EBITDA **$1.4 mln**	Project launch period **3.2 years**
Revenue **$1.7 mln**	IRR **22.4%**	DPP **6.5 years**

BUSINESS MODEL

- The Transcarpathian Neogene Depression holds significant geothermal water resources, with temperatures of up to 70 °C and flow rates of up to 45 l/s, as confirmed by geophysical surveys and the exploratory drilling of over 60 thermal wells.
- Some of these wells (particularly in the Berehove area) have natural head (self-discharge), which reduces energy consumption, with water temperatures reaching up to 57 °C and mineralisation levels of 21–27 g/dm^3.
- The project envisions the development of local geothermal energy systems with the capacity to convert heat into electricity via organic Rankine cycles (ORC), and integration into local networks as a flexible, shunting energy source.

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

Geothermal equipment suppliers, installation contractors, energy consultants, financial institutions, government agencies (e.g. the State Service of Geology and Subsoil of Ukraine), and utility companies.

INCENTIVES

The project may receive government incentives, including tax benefits and infrastructure support. Priority status as a green energy project is currently under discussion.

KEY POINTS OF PROJECT IMPLEMENTATION

POBUZKA–TALNE –POLIANA

ENERGY, ELECTRICITY DISTRIBUTION AND TRANSMISSION

UKRENERGO NPC [SOE]

New Construction of Transit OHL 330 kV Pobuzka –Talne – Poliana from SS 330 kV Talne

The project is available in Single Project Pipeline

- **Brief Description:** This project is aimed at improving the reliability of power supply in the Cherkasy region and preventing environmental disasters that may occur due to emergency shutdowns, as well as increasing the capacity of the crossing of the PNPP - Dnipro.
- **Products/Services:** The project provides for the construction of new high-voltage networks and substations to ensure the stable operation of the power system and critical facilities in the region.
- **Technological Parameters Of The Project:** It is planned to build and reconstruct high-voltage lines (330 kV overhead lines) using modern wires AS400/51 and AS500/204, as well as the integration of optical cable into the lightning protection cable. New equipment will be installed at 330 kV and 150 kV substations, which will increase the efficiency of the power system.
- **Project Strengths:** The implementation of the project will significantly increase the reliability of power supply in the Cherkasy region, minimizing the risk of emergency shutdowns and guaranteeing the stable operation of critical facilities. The construction of the 330 kV Talne substation and new 330 kV overhead lines will improve the power supply of the Uman hub, contributing to the development of the region and energy security.
- **Target Market:** The target market of this project includes all electricity consumers in the Cherkasy region, including the residential, commercial and industrial sectors, with a particular focus on the critical infrastructure of Cherkasy, Cherkasy and Zvenyhorod districts. In addition, Azot PJSC and the Uman Energy Hub are the main beneficiaries due to their critical energy needs and existing supply constraints.

[1] The project information and financial indicators are provided by company-initiator of the project.

KHMELNYTSKYI REGION

ENERGY, NUCLEAR ENERGY

ENERGOATOM JSC [SOE]

Construction of AP1000 Units No. 5 and 6 at the Khmelnytskyi Nuclear Power Plant

The project is available in Single Project Pipeline

- **Brief Description:** The Khmelnytskyi Nuclear Power Plant Units 5 and 6 project focuses on advanced AP1000 technology, aiming to enhance safety and efficiency in nuclear energy production. The design capacity is 2,294 MW.
- **Products/Services:** Increased electricity production, with an additional annual output of 15.8 TWh.
- **Technological Parameters Of The Project:** The AP1000 is a proven Generation III+ reactor featuring unique passive safety systems, exceptionally high efficiency, and the capability to operate in load-following modes.
- **Project Strengths:** The project aims to meet the electricity needs of the state, legal entities, and individual consumers, while also enabling the export of electricity.
- **Target Market:** The project is based on licensed, proven technology that has been successfully implemented worldwide.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing:
CAPEX - 50% debt Finance institution (banks and other investors), Westinghouse; 50% own funds; or other mix of own funds and debt capital.
OPEX – own funds.

Project Status: The feasibility study has been completed and successfully passed expert review, with a positive conclusion issued in June 2025. The Environmental Impact Assessment (EIA) procedure is currently ongoing.

- **Expected Financial Indicators**

NPV (60 years) **$1,797.6 mln**

Revenue **$3,637 mln**

IRR **19.4%**

Project launch period - **9 years**

Payback period - **5.8 years**

DPP - **19.8 years**

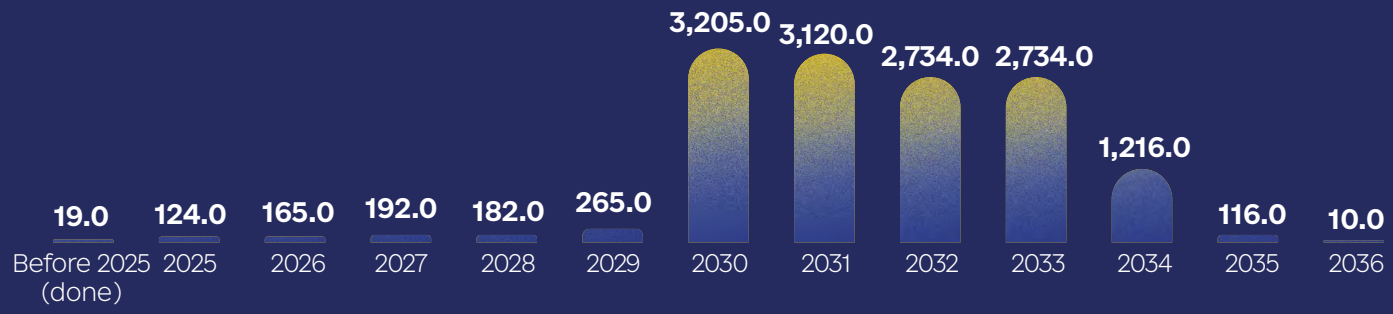

BUSINESS MODEL

- Includes two main profit streams: domestic electricity sales within Ukraine's integrated energy system, and electricity exports.

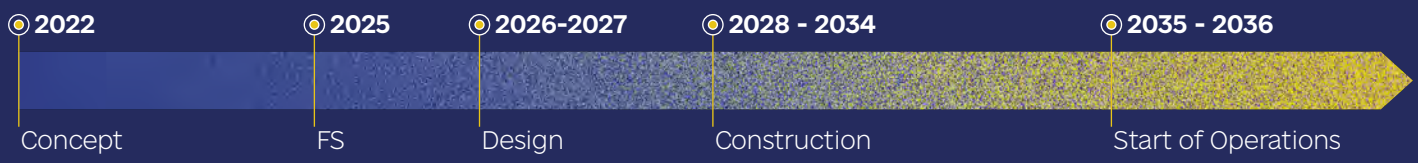

KEY PARTNERS

Westinghouse (USA), EDF (EU), and the State Nuclear Regulatory Inspectorate of Ukraine are key partners involved in technology provision, regulatory oversight, and technical cooperation. Agreements have been signed between Energoatom and Westinghouse for feasibility study input and procurement of AP1000 equipment.

CAPEX IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

MYKOLAIV REGION

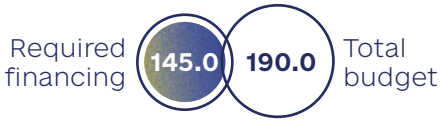

ENERGY, NUCLEAR ENERGY

ENERGOATOM JSC [SOE]

Technological Complex for Fuel Assembly Manufacture

- **Brief Description:** Nuclear fuel production in Ukraine using Westinghouse technology involves establishing a production line for the manufacture of finished fuel assembly (FA) components.
- **Products/Services:** The project will establish local production of nuclear fuel assemblies in Ukraine using Westinghouse technology.
- **Technological Parameters Of The Project:** The technological complex will have a production capacity of 570 fuel assemblies per year.
- **Project Strengths:** Existing domestic nuclear power plants, with the potential to expand fuel production for future nuclear power units.
- **Target Market:** Licensed and proven technology, an established customer base, and the ability to diversify nuclear fuel supplies for Ukraine's VVER-1000 reactors.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing:**65 % debt and 35 % equity, or another appropriate mix. Funding is expected to come from a combination of Energoatom's capital, U.S. strategic assistance, and international financial institutions**

Project Status: The feasibility study has been developed and approved by company order. The Environmental Impact Assessment (EIA) procedure has been completed.

- **Expected Financial Indicators**

NPV (60 years) **$82.2 mln**

EBITDA (3rd year) **$49.6 mln**

Project launch period - **3 years**

Revenue (3rd year) **$521.9 mln**

IRR **19.9%**

Payback period - **4.3 years**

DPP - **8.5 years**

BUSINESS MODEL

- The business model provides for the assembly of nuclear fuel assemblies using Westinghouse technology to supply Ukrainian nuclear power plants. A significant share of revenue is expected to come from cost savings on fuel assembly purchases, given their traditionally high market price.

KEY PARTNERS

- Westinghouse.

INVESTMENTS IN THE PROJECT, $ MLN

According to the Energoatom Fuel Fabrication Facility Scoping Report, Westinghouse proposes to implement the project within approximately four years.

By Order No. 382 of the Ministry of Energy of Ukraine dated 11 November 2023, NNEGC "Energoatom" was officially designated as the operator of the nuclear installation for the production of fuel assemblies (FAs) for nuclear power reactors.

KEY POINTS OF PROJECT IMPLEMENTATION

POLTAVA REGION

ENERGY, OIL REFINING

UKRNAFTA PJSC (NAFTOGAZ GROUP) [SOE]

Kremenchuk Oil Refinery Modernisation

The project is available in Single Project Pipeline

- **Brief Description:** The Company is considering options for comprehensive modernisation of the Kremenchuk Oil Refinery with the replacement of a large part of oil processing equipment.
- **Products/Services:** The modernisation can expand oil refining capacity to 11 mln tonnes, and increase oil processing depth.
- **Technological Parameters Of The Project:** New equipment also will contribute to decreasing emissions (CO2, NOx, CH4, SO2, etc.) per tonne after modernisation.
- **Project Strengths:** Target market for the project is the Ukrainian market. After modernisation the production of gasoline will be approx. 2.3 mln tonnes. Along with the production of diesel fuel (approx. 5.3 mln tonnes), domestic processing facilities can provide up to 2/3 of Ukraine's petroleum products consumption.
- **Target Market:** After the modernisation Kremenchuk refinery will be able to almost completely cover Ukrainian market's fuel demand.

- **Projects highlights[1], $ mln**

Required financing **2,700** | **2,700** Total budget

Financing structure: **CAPEX 100%**

Type of financing: **debt, project finance, grants etc.**

Project Status: Feasibility Study.

- **Expected Financial Indicators**

NPV **$326.0 mln**

IRR **27%**

Project launch period **3 years**

DPP **10.1 years**

BUSINESS MODEL

- Kremenchuk oil refinery has supply contracts with Ukrnafta, that operates the largest mono-brand gas station chain in Ukraine.

KEY PARTNERS

A French company Axens Horizon is involved in preparing a feasibility study and other project documentation and already it has prepared the market overview.

Part of Axens's fee will be covered by the French government.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

Oil & gas basins

Temporarily occupied territories

ENERGY, OIL, GAS

UKRNAFTA PJSC (NAFTOGAZ GROUP) [SOE]

Joint Development of Oleska Area

■ **Brief Description:** Situated in the West of Ukraine, Oleska area is the largest Oil & Gas field of the company and contains vast unconventional oil resources. The total area is 6,324 km².

■ **Technological Parameters Of The Project:**

- Conventional reserves: Oil: 29.0 mt, Gas: 27.0 bcm.
- Unconventional hydrocarbons: ~1.6 tcm.
- Gas from compacted reservoir rocks: ~1.4 tcm.

The minimum work programme for 5 years consists of:

- 1,500 linear km seismic surveys using 2D technology;
- 300 km seismic surveys using 3D technology;
- 3 wildcat wells; 5 vertical exploration wells;
- 5 sidetracks with a horizontal part of up to 700 m;
- flow tests and necessary facilities.

OBJECTIVE

■ To attract investors to the exploration and development of the Oleska area to achieve the largest economically viable hydrocarbon production volumes. Ukrnafta would like to involve experienced partners to fully unleash the potential of Oleska area.

PARTNER'S ROLE

■ To provide investments and expertise to explore and develop fields with unconventional hydrocarbons reserves.

■ **Projects highlights[1], $ mln (1st stage of the project*)**

Required financing: **94.2**

Type of financing: **own funds / project financing**

Project Status: As of now, Ukrnafta is finalizing the necessary legal procedures to begin operations. Simultaneously, Ukrnafta is looking for experienced partners to conduct joint operations on the field.

■ **Expected Financial Indicators**

NPV **$45.8 mln**

Project launch period **5 years**

IRR **24.1%**

DPP **9.3 years**

* Economic indicators are calculated without taking into account the attraction of external financing.

OPERATIONS

■ The partner or Ukrnafta will execute the proposed field development programme, operatorship function will be detailed described into Joint Op

CONTRACTUAL FRAMEWORK

■ We are open to negotiating different contract structures, primarily consider production-sharing agreement.

APPLICATION & SELECTION PROCESS

■ Potential investors express their interest and after the compliance procedures get access to a Virtual Data Room summarizing all available information on Oleska area;

■ If interested, candidates submit their offers of field development plans and cooperation terms;

■ Ukrnafta evaluates the offers and selects the winner;

■ Parties negotiate a final agreement and, after approval by the Cabinet of Ministry of Ukraine, start implementing the development plan;

■ Financial gains from cooperation are distributed according to the agreed terms.

■ Ukrnafta considers to obtain priority right to buy an investor's share in production of oil/condensate at the market price.

EXPECTED PROJECT SCHEDULE (INITIAL WORKING PROGRAMME)

MAP OF UKRNAFTA'S FIELDS FOR THE 2ND STAGE OF INVESTOR SELECTION

[1] The project information and financial indicators are provided by company-initiator of the project.

ENERGY, UNDERGROUND GAS STORAGES

UKRTRANSGAZ JSC (NAFTOGAZ GROUP) [SOE]

Underground Gas Storages Critical Infrastructure Replacement

- **Brief Description:** Replacement of 7 gas compressor units of 16 MW capacity each (total capacity 112 MW) on Ukrainian underground gas storages.
- **Products/Services:** The project will increase design capacity for natural gas injection and withdrawal.
- **Technological Parameters of the Project:** Turbine-driven gas compressor units of 16 MW capacity each from world leading manufacturer.
- **Project Strengths:** Modernisation of gas storages helps customers quickly and easily inject and withdraw gas, which contributes to reinforcing of Ukrainian and European security of gas supply.
- **Target Market:** Ukrainian and European gas markets.

KEY PARTNERS

- JSC Ukrtransgaz is the storage system operator responsible for safe operation of underground gas storages in Ukraine.
- Ukrtransgaz operates twelve gas storages with an overall working gas volume of 30.95 bcm.
- This is the largest gas storage network in Europe and the third largest worldwide.
- Ukrtransgaz' portfolio includes 1,358 customers, more than 180 customers are from abroad.

UDPR LLC

GREENWEST PtX: 500 MW renewable hydrogen cluster

- **Brief Description:** Renewable hydrogen and Power-to-X project, led by UDP Renewables and Hydrogen Partners. Located 10 km from the EU border, it aims to supply renewable hydrogen to Europe, strengthen energy security, and support climate goals. The project allows for rapid launch and phased expansion.
- **Products/Services:** Renewable hydrogen / ammonia / derivatives production (Phase I - 5.0 thousand tonnes H2 per year, Phase II - 35.0 thousand tonnes H2 per year in Phase III - 50.0 thousand tonnes H2 per year).
- **Technological Parameters Of The Project:** Build-out of renewable hydrogen / ammonia / derivatives production infrastructure (wind and solar assets, BESS, electrolysis, etc.). Electrolyser capacity: Phase I - 50 MW, Phase II - 200 MW, Phase III - 250 MW. Total Project Cost – 295.0 up to $3.0 billion.
- **Project Strengths:** The sponsor is Ukraine's leading investment and development company, with an active portfolio in solar energy and a substantial development pipeline in wind energy. It operates in partnership with a Dutch company focused on development and commissioning of hydrogen assets.
- **Target Market:** Local market, EU market: Poland, Austria, Germany.

BUSINESS MODEL

- Production of renewable hydrogen for export to Central European countries.

KEY PARTNERS

Bayerngas GmbH, bayernets GmbH, Open Grid Europe GmbH and RAG Austria AG.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

ENERGY, HYDROGEN

WEST OF UKRAINE

GAS TSO OF UKRAINE LLC [SOE]

Central European Hydrogen Corridor

- **Brief Description:** The project aims to create a green hydrogen "highway" with a design capacity of 1.5 mln tonnes per year. Pure hydrogen is planned to be transported from the very beginning of the project's operation.
- **Products/Services:** Transportation of pure hydrogen via pipeline, along with related infrastructure and support services.
- **Technological Parameters Of The Project:** The project focuses on repurposing existing redundant infrastructure within Ukraine's gas transmission system (GTS).
- **Project Strengths:** Demand centres and hydrogen valleys located in Southern Germany and along the corridor through the Czech Republic and Slovakia.
- **Target Market:** Optimal cost-efficiency through the use of 100% repurposed pipeline infrastructure; high operational flexibility to adapt to varying supply and demand conditions; minimal impact on natural gas supply security, as parallel pipeline branches will be used for the hydrogen corridor.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 100%

Type of financing:
debt, grants

Project Status: GTSOU, in cooperation with Eustream a.s. (Slovakia), NET4GAS (Czech Republic), and OGE (Germany), has completed the pre-feasibility study. The company is currently undertaking preparatory measures for the full feasibility study.

- **Expected Financial Indicators**

NPV
$143 mln

IRR
20%

DPP
8 years

Project launch period
6 years
(inc. repurposing – 2 years)

Payback period
5.4 years

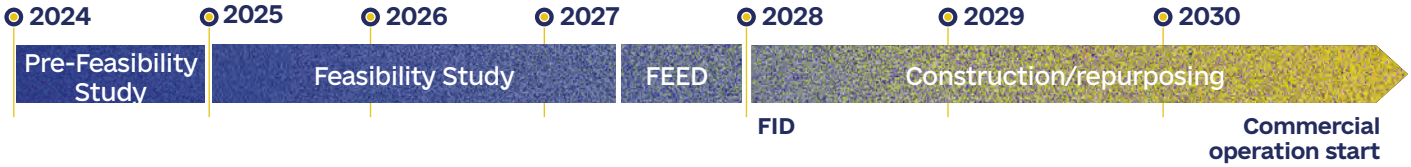

BUSINESS MODEL

- Ukraine possesses substantial potential for green hydrogen production - estimated at 18 to 38 million tonnes annually - the majority of which is expected to be exported to the EU. Pipeline transport remains the most cost-effective method for delivering large volumes of hydrogen over long distances.
- By repurposing existing gas infrastructure, GTSOU can monetise its excess pipeline capacity and generate a new revenue stream through hydrogen transmission tariffs.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

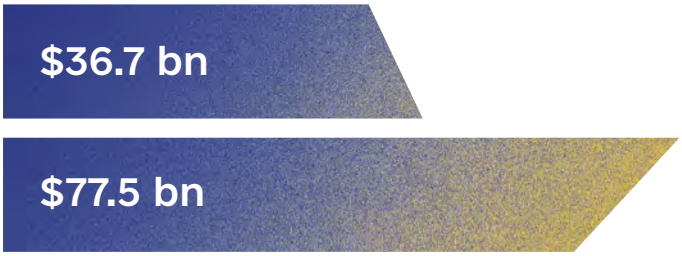

[1]The project information and financial indicators are provided by company-initiator of the project.

4.3 TRANSPORT AND LOGISTICS SECTOR

A modern, reliable, and EU-integrated transport and logistics system is vital to Ukraine's economic recovery and long-term competitiveness. As a large country at the crossroads of Europe and Asia, Ukraine has the potential to become a key transit hub for regional and international trade. The war has exposed critical vulnerabilities but also opened a window for transformation. With its strategic location, EU integration orientation, and massive infrastructure needs, the sector presents substantial opportunities for public and private investment. Restoring and upgrading multimodal transport systems—rail, road, sea, river, and air—will not only accelerate Ukraine's recovery but also embed it more deeply into the European transport network and global value chains.

The transport sector is among the most severely affected segments of Ukraine's economy due to russia's full-scale invasion: at the end of 2024, damages exceeded **$36.7 bn**, with more than 80% of that amount attributable to motorways and railways. The war disrupted logistics chains, destroyed infrastructure and caused transport costs to rise, substantially impacting exports and business activities. The needs for recovery for 2025–2035 are estimated at over **$77.5 bn**.

Despite the challenges, Ukraine's logistics system has shown resilience, supported by international partners.

Although international freight demand is still 32% below pre-war levels, the new maritime corridor has helped restore export volumes. However, import volumes are lagging, widening the trade deficit. Sustained investment and improved intermodal capacity are vital for recovery.

RAIL TRANSPORT

Rail transport remains the main mode of freight transport, especially for exports. In 2024, transport volumes amounted to 174.9 mln tonnes – almost half as much as in 2021. Key challenges are damage to infrastructure, congestion at the western border, and a lack of intermodal terminals. Measures are being taken to modernise the network, develop European gauge tracks, and expand intermodal infrastructure.

ROAD TRANSPORT

Road transport ensures flexibility and last-mile delivery. In 2024, road exports exceeded 10 mln tonnes worth $14.7 bn – a 5% increase vs. 2023. Border infrastructure is being improved, including plans to rebuild 28 and construct 6 new crossing points under a new strategy approved in late 2024[19].

SEA AND RIVER TRANSPORT

Sea and river transport traditionally accounted for more than half of Ukraine's exports. Before the war, 80% of capacity was concentrated in the ports of the Odesa and Mykolaiv regions. Thanks to the launch of the Black Sea corridor in August 2023, export volumes have almost recovered: in 2024, more than 92 mln tonnes were transshipped through seaports, of which 88 mln tonnes were export cargo. Although transshipment volumes in the Danube ports have decreased, they remain important for agricultural exports and overall logistics stability. The development of the Danube cluster continues, with 23 new terminals already opened.

[18] - The World Bank - RAPID DAMAGE AND NEEDS ASSESSMENT (RDNA4), February 2025
[19] - Government Portal.

AIR TRANSPORT

Air transport remains suspended due to security risks. Before the war, 99% of the pre-war passenger traffic was concentrated in 7 (Ukrainian) airports. Restoring domestic aviation will be critical for recovery and investment.

INTERMODAL TRANSPORT

Intermodal transport is growing in importance. For example, Ukrzaliznytsia increased intermodal container movement by 28% in 2024, reaching 258 180 TEU.

In response to these challenges and in line with EU integration goals, the Cabinet of Ministers adopted the updated **National Transport Strategy of Ukraine for the period until 2030** on 27 December 2024[20]. The Strategy includes an operational plan for 2025–2027 and sets out four strategic goals:

1. Restore and develop a competitive, EU-integrated transport system aligned with the TEN-T network;
2. Ensure high-quality passenger mobility;
3. Build a safe, green, and energy-efficient transport system;
4. Strengthen institutional capacity, governance, and human capital.

Furthermore, the Strategy aligns with EU legislation, the Green Deal, and European standards for mobility and safety, providing a comprehensive framework for both recovery and sustainable long-term development.

SWOT-ANALYSIS

Strengths

- Ukraine is a **key transit hub** between Europe and Asia, with access to the Black Sea, the Danube River, and integrated road and rail links with the EU and neighboring countries
- **Well-established infrastructure** across rail, road, sea, river, and air transport, with intermodal and multimodal capabilities
- **Resilient Rail Network: one of the largest in Europe**, with both state and private operators ensuring continuity of cargo movement even during wartime
- **Wide involvement of private sector** in some transport infrastructure segments with competitive market conditions

Weaknesses

- **Severe infrastructure damage**, estimated over $36.7 bn in transport sector, especially to roads and railways
- Air transport is **currently on hold**
- **Capacity bottlenecks** e.g., western border crossings face congestion due to limited exit points and incompatible rail gauges with the EU
- **Warehouse shortages** across key logistics corridors
- Difference between **the Ukrainian and EU rail gauge**
- **Outdated infrastructure** and depreciated rolling stock (e.g. locomotives) reduce efficiency and reliability

[20] – Verkhovna Rada of Ukraine.

Opportunities

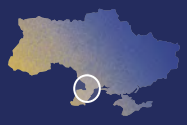

- **Closer alignment with EU transport systems (TEN-T)** and liberalisation of the rail sector can boost competitiveness and connectivity
- **Black Sea Corridor** expansion
- Reconstruction and modernisation of transport infrastructure sector holds **great potential for development and FDI attraction**
- **Growth in containerisation and intermodal hubs** can diversify and modernise freight handling
- **Developing the potential of Public-Private Partnerships** e.g. seaport and airport concessions, including key initiatives like Boryspil Airport expansion and PPP-based toll systems
- **Resolving pre-war existing needs**, major road and bridge upgrades, and rail electrification projects

Threats

- **Continued hostilities pose risks to infrastructure**, investment, and operational continuity
- **Geopolitical uncertainty:** shifting alliances and regional instability may affect long-term planning and partnerships
- **War-related budget reallocations** limit public funding for infrastructure projects
- **Logistics chain disruptions** such as blockades and security threats to sea and air routes reduce reliability and increase costs
- **Eastern access restrictions:** the war with russia and the temporary occupation of Ukrainian territory constrain transit potential and limit the development of international transport links on Ukraine's eastern borders

ODESA REGION

TRANSPORT AND LOGISTICS, MARITIME TRANSPORT

TEHAHRO LLC

Grain cargo terminal in Pivdennyi seaport

- **Brief Description:** Construction of the multifunctional marine terminal designed for transshipment of agricultural products, located in Odesa region, Ukraine.
- **Products/Services:** The project aims to transship mainly grains but also other types of goods and liquids. The project can also provide services related to storage and drying and is located the territory of the Industrial Park.
- **Technological Parameters Of The Project:** The project consists of a railway station, silo and floor storage warehouses, a liquid bulk terminal, a double-sided berth, and an electrical substation.
- **Project Strengths:** A fully developed and permitted project at the ready-to-build stage. Located at the deepest Ukrainian maritime port, neighboring the area of the industrial park and the biggest railway station.
- **Target Market:** Export operations.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **45% equity, 55% debt**

Project Status: Ready for implementation. For the purposes of the project implementation, all the necessary technical specifications and the MBUO were obtained, the OVD was completed, and a comprehensive state examination was carried out.

- **Expected Financial Indicators**

NPV (14 years) **$62.4 mln**

EBITDA (12th year) **$40.2 mln**

Project launch period **2 years**

Revenue (12th year) **$656.9 mln**

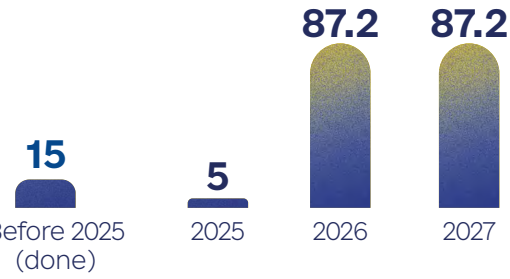

IRR **15.6%**

DPP **8.3 years**

BUSINESS MODEL

- With a project CAPEX of $179.4 million and a construction period of 2 years, the payback period is 8 years. EBITDA is approximately $30 million.
- The project provides jobs for over 300 people and, considering the size of the land (over 250 hectares), can be significantly expanded.

INVESTMENTS IN THE PROJECT, $ MLN

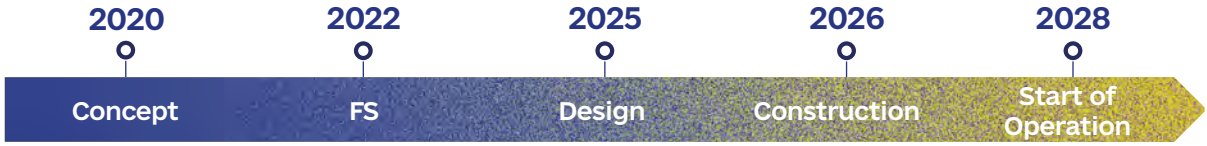

KEY PARTNERS

The project is designed to use the latest EU-made equipment, ensuring efficiency and adherence to ecological standards. We are closely working with EU credit export agencies to cover the cost of equipment and civil works.

INCENTIVES

The project benefits from Ukrainian legislation aimed at attracting foreign investment. We are closely working with the Ukrainian government to obtain tax and other benefits, such as 30% of CAPEX to be reimbursed by the government, exemption from import VAT, and exemption from corporate tax for 5-10 years.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

TRANSPORT AND LOGISTICS, WAREHOUSE INFRASTRUCTURE

KYIV, LVIV, ODESA, DNIPRO REGIONS

TERWIN GROUP LLC

WINHUB from TERWIN

- **Brief Description:** Construction of WINHUB - Ukraine's nationwide network of Class A logistics parks in 4 regions (Kyiv, Lviv, Odesa, Dnipro) with total area of 1,000,000 m² 40% of that area shall be pre-leased to anchor tenants – EVA and VARUS (Terwin's retail chains).

  Phase 1 of the Project involves the development of 62,000 m² of modern warehouse space in Kyiv.
- **Products/Services:** Lease of A-class warehouses and premises for retail, TIR-parking, hotels/hostels, gas stations and repair facilities.
- **Technological Parameters Of The Project:**
  - Technical specs: 12.5m clear height, 6 tonnes/m² m floor load;
  - LEED-certified sustainable building design with integrated solar power.
- **Project Strengths:**
  - The project is strategically located on the E40 highway, a key Ukraine-EU logistics corridor;
  - Phased implementation approach optimising capital deployment and risk management.
- **Target Market:** Warehouse and service area for retailers, e-commerce, 3PL operators, and manufacturing companies, creating environment for SME development.

- **Projects highlights[1], $ mln**

Project budget	Own investment
Phase 1[2] – **109**	Phase 1 – **43.4**
Total[3] – **700**	Total – **210**

Financing structure:
CAPEX 100%
Type of financing:
70% debt, 30% equity
(including in-kind investments – land)

Project Status: Concept.

- **Expected Financial Indicators**

Annual rental income	Project launch period
Phase 1 – **$3.8 mln**	Phase 1 – **2 years**
In 2033 – **$70 mln**	All phases – **7 years**

BUSINESS MODEL

- First nationwide A-class logistics parks network in severely undersupplied Ukrainian market. 40% of areas shall be pre-leased to Terwin's retail chains, ensuring day-one income and stable cash flow.
- The Project includes development of multifunctional infrastructure with office space, TIR-parking, retail facilities and driver accommodations (Welcome Centre).

KEY PARTNERS

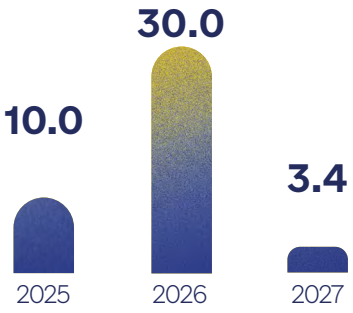

EVA – #1 drogerie retailer in Ukraine (1000+ stores);

VARUS - #5 FMCG-retailer in Ukraine (100+ supermarkets).

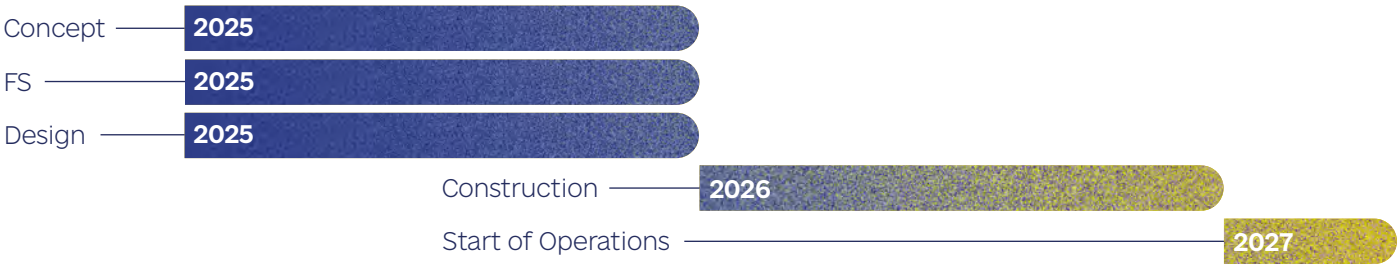

INCENTIVES

It may be eligible for governmental incentives due to its sustainable LEED-certified design and multifunctional infrastructure.

[3] All phases construction timeline: 2025-2032.

TRANSPORT AND LOGISTICS, INTERMODAL TRANSPORTATION

ODESA REGION

ALLSEEDS BLACK SEA LLC

Creation of Dry Cargo Logistic Hub

- **Brief Description:** Logistic hub under development based on Allseeds Group's existing dry cargo terminal and transshipment infrastructure, with an annual transshipment volume of 3 million tonnes.
- **Investor Engagement Opportunity:** The project is open to engaging potential investors for equity participation in its fully operational phase.
- **Products/Services:** The project entails the construction of additional dry cargo warehouses to have a one-time storage capacity of 175,000 mt, a railway with an unloading station, roads, external power supply, facilitating an expansion to a total dry cargo transshipment volume of 3 million metric tonnes per year.
- **Technological Parameters Of The Project:** Panamax type of vessels can be loaded for a couple of days; dry cargo export increase.
- **Project Strengths:** High-speed dry cargo transshipment hub in Ukraine's deepest port Pivdennyi; project underway with strong investment returns as for port infrastructure.
- **Target Market:** Strategic investors, IFIs, banks, funds.

Projects highlights[1]

Enterprise value[2]: **$118 mln**

Type of financing: **100% equity**

Project Status: Partially operational. Under implementation to achieve full capacity in 2025.

Expected Financial Indicators

NPV **$83.3 mln**

EBITDA (1 year) **$16 mln**

Project launch period **1 year**

Revenue (1 year) **$30.0 mln**

IRR **14%**

PP - **8 years**

DPP - **13 years**

BUSINESS MODEL

- Dry Cargo Logistic Hub combines direct access to berths in Port Pivdennyi and warehouse storage capacities for the export of dry cargo.

KEY PARTNERS

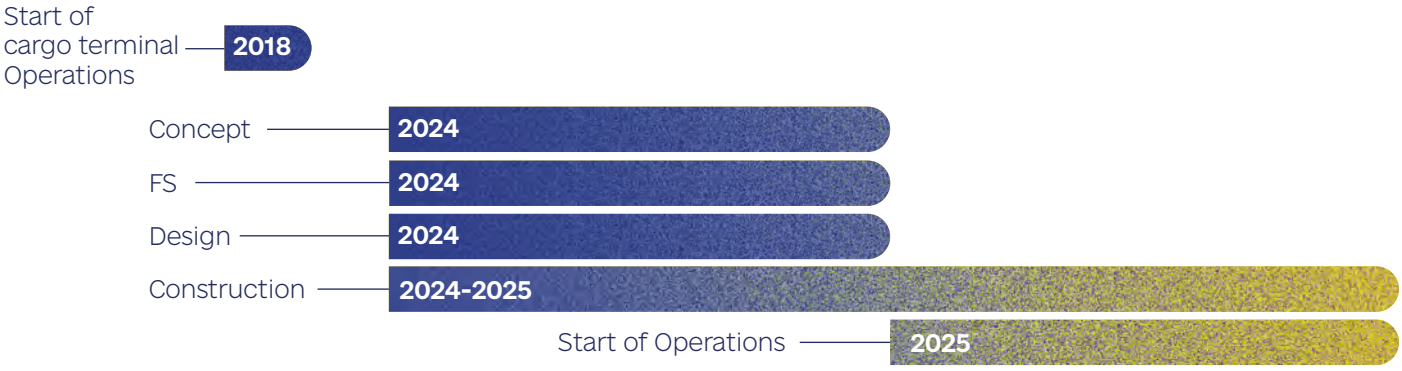

- Traders of vegetable oils and dry cargo.

INCENTIVES

Allseeds Group is one of the largest manufacturers and exporters of vegetable oils and meals in Ukraine, which owns a multiseed Oilseed Processing Plant with capacity in Ukraine's deepest water port Pivdennyi. Allseeds also provides services of transshipment of vegetable oils and dry cargo at its terminals in Pivdennyi.

Allseeds Group turnover is about $400 mln per year.

TRANSPORT AND LOGISTICS, WAREHOUSE INFRASTRUCTURE

KYIV REGION

ZAMMLER UKRAINE LLC

Construction a warehouse complex

- **Brief Description:** Construction of an A-Class warehouse complex in IV stages. The Gross Project Area: 66,606.0 m².
- **Products/Services:** Facility is assigned to provide logistic services: warehousing, a full range of operations for cargo handling within the warehouse, stickering, co-packing, fulfillment, cross – docking.
- **Technological Parameters Of The Project:** Energy-efficient wall sandwich panels, local bioactive wastewater treatment facilities, rooftop solar panels, rainwater harvesting and reuse.
- **Project Strengths:**
  - Quick launch of the project - transfer of existing business from rented premises to own (existing customers will occupy 80% of the new warehouse);
  - Business expansion - increasing the existing warehouse space due to the construction of the third stage will provide an opportunity to additionally attract new customers.
- **Target Market:** The Project could increase ZAMMLER's share of the 3PL services market in Ukraine from 11.3% to 13.5%.

- **Projects highlights[1], $ mln**

Type of financing: **70% debt, 30% equity**

Project Status: Feasibility study completed. Land available, design documentation developed, equipment for the second and third phases of construction available. Start of earthworks - April 2025.

- **Expected Financial Indicators**

NPV	Net Operating Margin	Project launch period
$1.7 mln	**87%**	**2.3 years**
Gross Income (2029)	IRR	DPP
$2.4 mln	**16%**	**14.5 years**

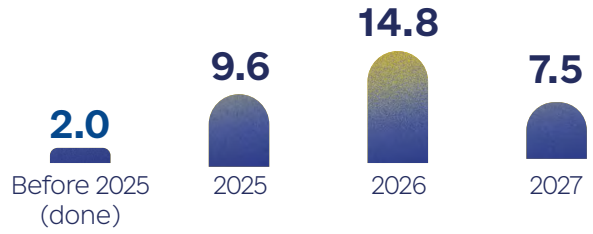

BUSINESS MODEL

- The facility is designed to serve existing B2B customers and attract new ones in order to provide logistics services with special fulfillment and cross-docking areas.

KEY PARTNERS

KARCHER, JYSK, Philip Morris, B/S/H, MARS, B.A.T., MONDELEZ, SAMSUNG, lifecell, DeLonghi, TOPEX, PUMA, DANISCO (DuPont), VENTS, RED BULL Ukraine, AVON, ADIDAS, SIEMENS, SCHNEIDER, LPP (Reserved, House, Cropp, Mohito, Sinsay), GENTEC CHP s.r.o., BIC, HARDEX, Reckitt Benckiser, FARMAK, Procter&Gamble, ARTERIUM, KNESS Group, Gorenje, OTIS, ZEPPELIN, Decathlon, ECOSOFT, ASCO PUMPS, KIMBERLY-CLARK, etc.

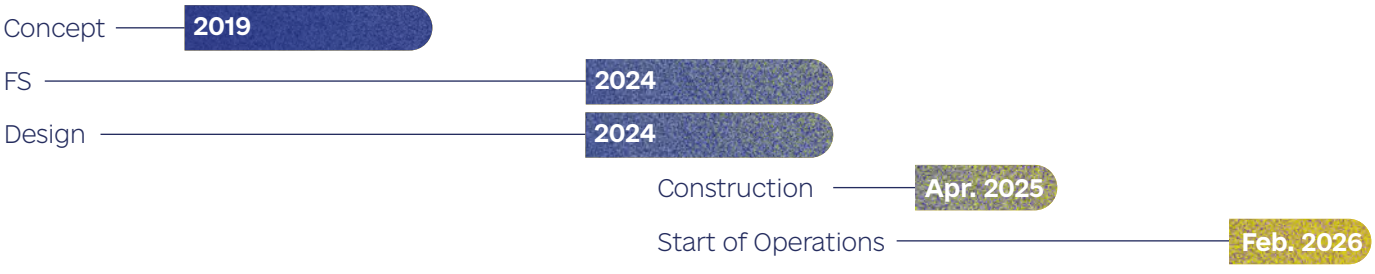

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

- The project is eligible for government incentives.

KYIV REGION

AVRORA GROUP

Resilient Logistics Hub – West Gate Redevelopment

- **Brief Description:** Resilient Logistics Hub is Ukraine's first highly automated warehouse, with total area of 75,000 m² (2/3 class A + 1/3 high-bay), to be built on the site of a damaged complex near Kyiv with direct access to national transport corridors.
- **Products/Services:** The project supports Aurora's rapid growth across its retail network in Ukraine. It enables fast and cost-efficient store replenishment and supports national click & collect operations.
- **Technological Parameters Of The Project:**
  - LEED green building certification;
  - Goods-to-person picking technology, smart conveyors, and machine vision;
  - Energy independent: powered by 3 MW solar panels.
- **Project Strengths:**
  - Innovative highly-automated technology;
  - Scalable platform backed by Aurora's fast-growing retail network;
  - LEED green-certified and energy-independent;
  - Strategic location in post-conflict zone;
  - Advanced stage of realisation.
- **Target Market:** Warehouse and logistics platform for Aurora's internal supply chain & 3PL or rental capacity for SME development (optional).

Projects highlights[1], $ mln*

Financing structure: **CAPEX 100%**

Type of financing: **debt & equity**

Project Status:

- **Fixed Infrastructure:** Plan & Feasibility Study, Design & Permitting, and Land Prep & Fundament – completed; ready for construction;
- **Automation + HBW:** Plan & Feasibility Study, Conceptual design – completed; supplier selection ongoing.

Expected Financial Indicators

NPV (12 years)	EBITDA (FY2037)	Project launch period
$30.8 mln	**$23.9 mln**	**3 years**
Revenue (FY2037)	IRR	DPP
$52.4 mln	**11.1%**	**10.3 years**

*All values are presented net of VAT (20%).

BUSINESS MODEL

- The hub supports Aurora's expanding retail network, which has demonstrated 20% CAGR in 2022–2024 with $998 million revenue in 2024. It enables cost-efficient store replenishment through automated goods handling.
- The project replaces rented space with modern, owned infrastructure.
- The business model follows a hybrid approach.

INCENTIVES

Converts a damaged site into a productive logistics hub, directly contributing to regional economic revival. Creates jobs in construction and logistics sectors;

Designed to meet LEED green building certification standards. Energy independent, powered by 3 MW of solar capacity – aligns with green recovery goals.

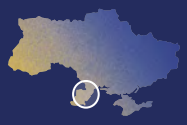

KEY PARTNERS

Horizon Capital, LNConsult, American Chamber of Commerce in Ukraine, European Business Association, Alpha Construction.

MINISTRY FOR DEVELOPMENT

Concession of the Chornomorsk Ferry Terminal

- **Brief Description:** Concession of Railway and Ferry Complex (CFT) for ~30 years to unlock operational potential of underutilised terminals and assets through private management and investment.
- **Products/Services:** CFT will handle ro-ro cargo, passenger ferries, and intermodal traffic. Services include vehicle processing, customs handling, passenger services, and cargo transfer.
- **Technological Parameters Of The Project:** The terminal features dedicated berths for ferry and ro-ro operations, with direct road and rail access. Planned upgrades include berth rehabilitation, digital systems, and terminal facilities.
- **Project Strengths:** The terminal is a unique multimodal facility and one of the largest on the Black Sea. It is located at the intersection of international trade corridors.
- **Target Market:** Target users include ferry operators, logistics providers, truck carriers, and international shippers operating between the EU, Turkey, Caucasus, and Central Asia.

- **Projects highlights[1], $ mln**

Type of financing:
project finance by Private Partner

Financing structure:
equity and debt combination decided by private partner

Project Status: Feasibility study prepared and submitted for approval.

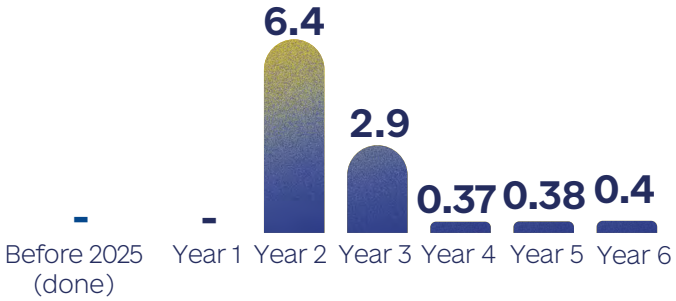

BUSINESS MODEL

- DBFOM concession.
- The private partner will invest in modernisation, operate the terminal, and generate revenues from ferry, cargo, and passenger services.
- SPV will have to improve asset usage efficiency and make annual fixed payments and variable payments (% of net revenue from concession activities).

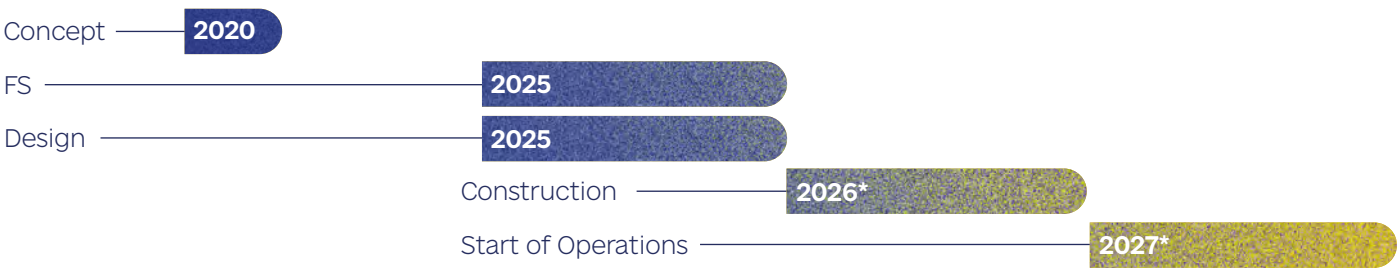

KEY PARTNERS

The project is supported by the Ministry for Communities, Territories and Infrastructure Development of Ukraine, the Ukrainian Sea Ports Authority, and international financial institutions (e.g., IFC, EBRD) providing technical and advisory support.

INVESTMENTS IN THE PROJECT, $ MLN

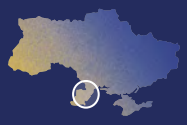

KEY POINTS OF PROJECT IMPLEMENTATION

*the exact date when the project will move to the implementation stage will be regulated by the concession agreement.

MINISTRY FOR DEVELOPMENT

Concession of the Chornomorsk Container Terminal

- **Brief Description:** The Chornomorsk Container Terminal (CCT) is a 40-year concession opportunity in Ukraine's Sea port of Chornomorsk. The project includes two terminals (6 berths) - Container and Universal - for private development and operation.
- **Products/Services:** CCT will handle containers, bulk, and general cargo. Services include loading/unloading, storage, and intermodal logistics via road and rail.
- **Technological Parameters Of The Project:** The site includes 6 berths (1,247 m total), depths of 11.5-14 m, and rail access. Initial capacity targets: 250,000 TEU and 3 Mt/year; scalable up to 760,000 TEU and 5.5 Mt/year.
- **Project Strengths:** Top Black Sea location, ready infrastructure, strong PPP framework, and full government and IFI support make CCT a standout investment.
- **Target Market:** The terminal will serve EU, Caucasus, Middle East, and Central Asian trade flows, as well as Ukrainian exporters and shipping lines.

- **Projects highlights[1], $ mln**

Type of financing:
project finance by Private Partner

Financing structure:
equity and debt combination decided by private partner

Project Status: Feasibility study prepared and approved, project is being prepared for the tender.

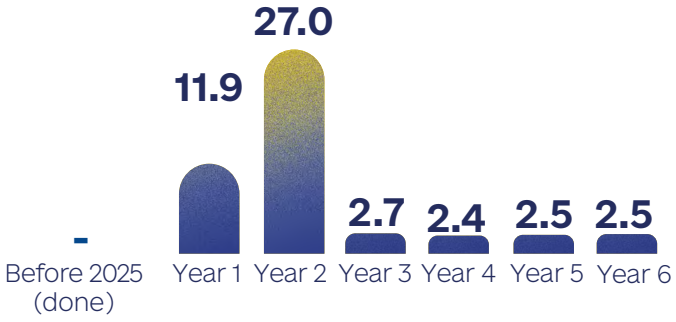

BUSINESS MODEL

- The concessionaire will operate under a DBFOM (Design-Build-Finance-Operate-Maintain) model, assuming full operational responsibility and investment obligations, while generating revenue from cargo handling fees and terminal services.
- SPV will have to improve the asset efficiency and pay annual fixed payments and variable payments (% of project revenue).

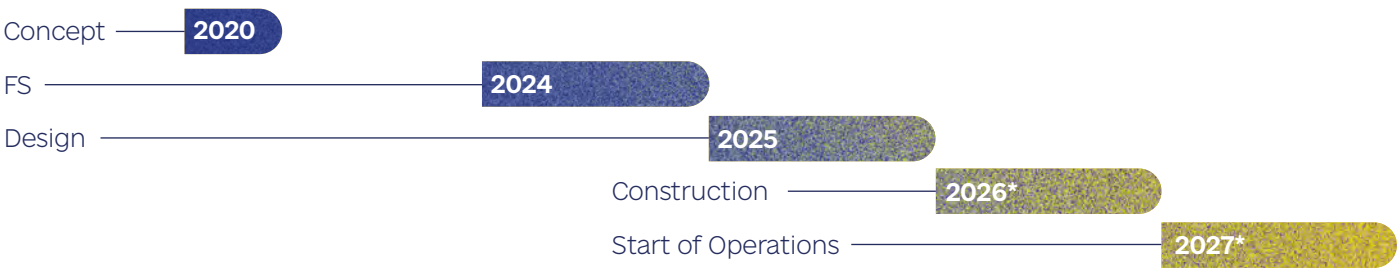

KEY PARTNERS

The project is supported by the Ministry for Communities, Territories and Infrastructure Development of Ukraine, the Ukrainian Sea Ports Authority, and international financial institutions (e.g., IFC, EBRD) providing technical and advisory support.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

*the exact date when the project will move to the implementation stage will be regulated by the concession agreement.

ZAKARPATTIA REGION

UKRAINIAN RAILWAYS (UZ) JSC [SOE]

Reconstruction of the UZ intermodal terminal in Chop

- **Brief Description:** Reconstruction of the UZ intermodal terminal in Chop to expand its capacity and improve the efficiency of container cargo handling. The reconstruction will be carried out in two phases.
- **Products/Services:** Container transshipment services and handling of container trains.
- **Technological Parameters Of The Project:**
  - Phase 1* – Grain terminal and warehouse to increase capacity to 17,160 TEUs/year;
  - Phase 2** – Container yard, intermodal train tracks, customs zone, gantry crane tracks, and infrastructure to increase capacity to 87,600 TEUs/year and expand railcar loading front to 30 units.
- **Project Strengths:** Significant growth in handling capacity and the ability to service full-scale container trains.
- **Target Market:** Manufacturing enterprises, the agricultural sector, and logistics companies.

* – Phase 1 reconstruction timeline: 2025-2026.

** – Phase 2 reconstruction timeline: 2027-2032.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 99%**

Type of financing: **80% debt, 20% equity**

Project Status: Design and estimate documentation is currently 90% completed.

NPV	PI	DPP
$3.4 mln	**1.3**	**14.3 years**
IRR	**Project launch period**	
16.2%	**3 years**	

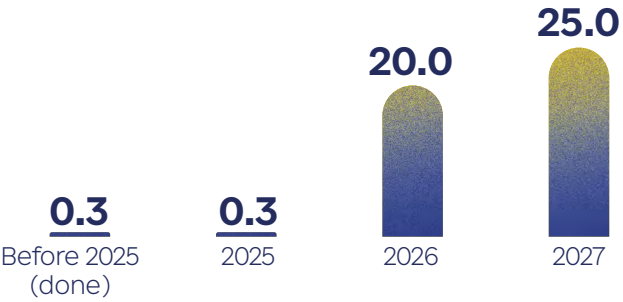

BUSINESS MODEL

- Internationally recognised cost components of containerised cargo delivery in multimodal transport (including inland transportation) reflect the widespread practice of utilising dry ports (container terminals). These facilities enable transshipment and the transfer of containers to other modes of transport or to warehouses, among other operations.
- The availability of such infrastructure ensures the fulfillment of end-customer needs, enhances the competitiveness of UZ in the European freight market, improves service quality and customer convenience, and supports Ukrainian exporters and importers with reliable containerised cargo delivery services.

KEY PARTNERS

Logistics companies, industrial enterprises, the agricultural sector, international container shipping lines, retail businesses, and delivery services.

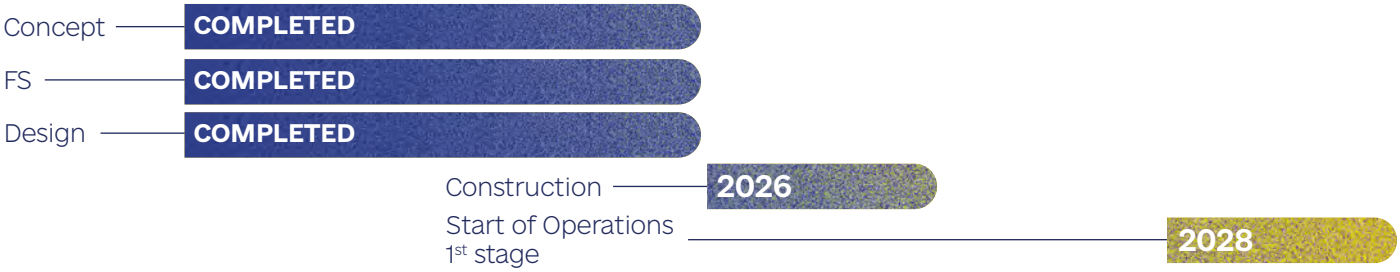

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

Enhancing logistics efficiency; increasing throughput capacity and cargo handling volumes; reducing operational costs; attracting investment and improving profitability; strengthening competitiveness and integration into global supply chains; ensuring sustainability and long-term development.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

TRANSPORT AND LOGISTICS, INTERMODAL TRANSPORTATION

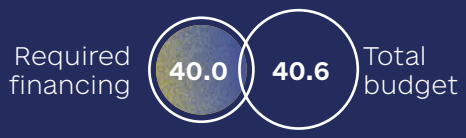

LVIV REGION

UKRAINIAN RAILWAYS (UZ) JSC [SOE]

Reconstruction of the UZ intermodal terminal in Sknyliv

- **Brief Description:** Reconstruction of the UZ intermodal terminal at Sknyliv station to create a transport hub with full customs and border operations for rail cargo arriving from Ukraine.
- **Products/Services:** The UZ intermodal terminal offers container reception and storage, handling of intermodal trains, customs cargo storage, and organisation of customs and border inspections.
- **Technological Parameters Of The Project:** The terminal includes a container yard, broad (1,520 mm) and narrow (1,435 mm) gauge tracks for trains, crane tracks for a gantry crane, administrative buildings, railway and road scales, and necessary engineering infrastructure. The terminal will expand to store 1,400 TEUs (3 tiers), including 600 TEUs under customs control.
- **Project Strengths:** The project provides an integrated approach to cargo processing, including customs and border controls, enhancing logistics efficiency at border sections.
- **Target Market:** Manufacturing enterprises, the agricultural sector, and logistics companies.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **80% debt, 20% equity**

Project Status: Design and estimate documentation is currently 100% completed.

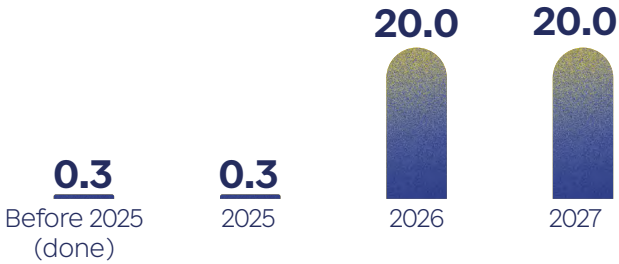

- **Expected Financial Indicators**

NPV	PI	DPP
$17.6 mln	**2.4**	**9.4 years**
IRR		**Project launch period**
34.5%		**2 years**

BUSINESS MODEL

- Internationally accepted cost structures for containerised cargo in multimodal (including inland) transport highlight the common use of dry ports (container terminals) for transshipment and transfer to other transport modes or warehouses.
- Such infrastructure helps meet end-customer needs, boosts the competitiveness of UZ in the European freight market, improves service quality, and supports Ukrainian exporters and importers with efficient container delivery solutions.

INVESTMENTS IN THE PROJECT, $ MLN

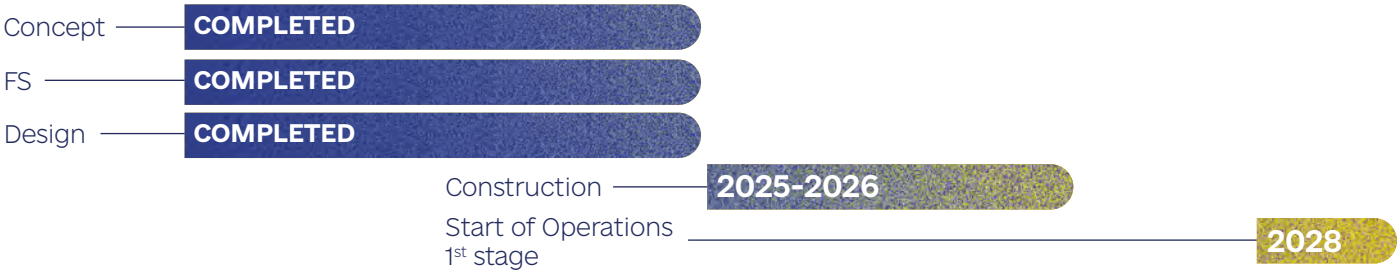

KEY PARTNERS

Logistics companies, industrial enterprises, the agricultural sector, international container shipping lines, retail businesses, and delivery services.

INCENTIVES

The initiative focuses on enhancing logistics efficiency, increasing throughput capacity and cargo handling volumes, reducing operational costs, attracting investment and improving profitability, strengthening competitiveness and integration into global supply chains, and ensuring sustainability and long-term development.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

VOLYN REGION

TRANSPORT AND LOGISTICS, INTERMODAL TRANSPORTATION

UKRAINIAN RAILWAYS (UZ) JSC [SOE]

Reconstruction of the UZ intermodal terminal in Kovel

- **Brief Description:** Reconstruction of the UZ intermodal terminal in Kovel to develop infrastructure at border areas and enable container transshipment and accumulation for export and import flows. It includes the reconstruction of the UZ intermodal terminal.
- **Products/Services:** The terminal will handle container reception, dispatch, and storage with customs and border procedures for cargo from Ukraine and/or the EU.
- **Technological Parameters Of The Project:** The facility will be transformed into a specialised intermodal zone with infrastructure for cargo handling, including customs areas, rail access for 40 wagons on each track gauge (1,520 mm and 1,435 mm), and capacity to handle 87,600 TEUs annually.
- **Project Strengths:** Strategic location at the border, full customs and inspection integration, and support for both EU and Ukrainian railway connections make the terminal a key logistics node.
- **Target Market:** Manufacturing enterprises, the agricultural sector, and logistics companies.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 98%**

Type of financing: **70% debt, 30% equity**

Project Status: Design and estimate documentation is currently 70% completed.

$7.0 mln	**1.8**	**11.5 years**
IRR	**Project launch period**	
20.6%	**2 years**	

BUSINESS MODEL

- International cost models for multimodal container transport highlight the importance of dry ports for transshipment and intermodal transfer.
- These facilities enhance customer service, strengthen UZ competitiveness in Europe, and support efficient logistics for Ukrainian exporters and importers.

INVESTMENTS IN THE PROJECT, $ MLN

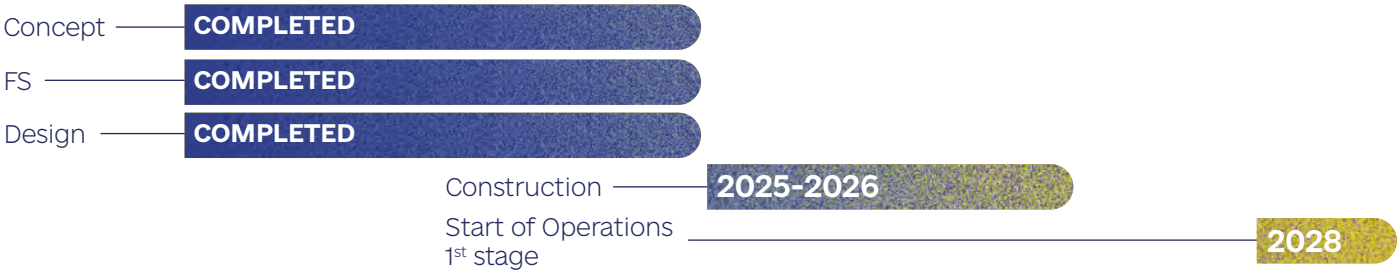

KEY PARTNERS

Logistics companies, industrial manufacturers, the agricultural sector, international container shipping lines, retail businesses, and delivery services.

INCENTIVES

Enhancing logistics efficiency; increasing throughput capacity and cargo handling volumes; reducing operational costs; attracting investment and improving profitability; strengthening competitiveness and integration into global supply chains; ensuring sustainability and long-term development.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

TRANSPORT AND LOGISTICS, RAILWAY INFRASTRUCTURE

LVIV REGION

UKRAINIAN RAILWAYS (UZ) JSC [SOE]

Lviv – Poland Rail Gauge Construction

- **Brief Description:** Construction of 81 km of 1435-gauge rail-track from the Ukraine/Poland state border to Mostyska II section and further onto station Sknyliv (Lviv) as a part of the two EU TEN-T corridors. Includes reconstruction and replacement of tracks, construction of a passenger station and an intermodal terminal.
- **Technological Parameters Of The Project:** Includes reconstruction of 1520-gauge tracks for reorienting traffic from double to single-track and replacement of 2nd line with 1435-gauge tracks according to TEN-T requirements. Upgrade of signaling and communication systems, electrical catenary system and artificial structure. New passenger stations and freight intermodal terminals in Sknyliv.
- **Impact:** ~ 2.6 million tonnes of increased cargo capacity; capacity for ~1-1.2 million additional people to cross border; up to 565 temporary construction jobs; 111 permanent UZ jobs; additional private sector job creation from export capacity gains.
- **Target Market:** Ukrainian exporters, importers and domestic railway passengers.

- **Projects highlights[1], $ mln**

Expected financial indicators:
TBC

Project launch period:
4 years

Project Status: Ready for implementation, submitted for 50% grant co-financing to CEF Call 2024.

BUSINESS MODEL

- **Possible business models include:** Build-only models for sections with design documentation already prepared, and Design-Build (DB) or Design-Bid-Build (DBB) models for remaining segments.
- Once completed, UZ will oversee maintenance and operations.

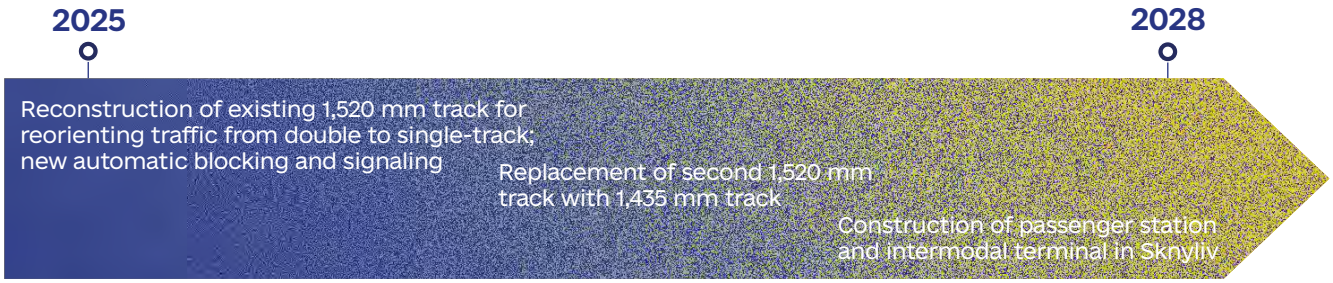

KEY PARTNERS

- The Ministry for Development of Communities and Territories of Ukraine, DG Move, JASPERS.

INCENTIVES

Project will allow equal access of European railway operators to the Ukraine's railway network and promote Ukraine's economic growth and cross-border trade by enhancing export capacities and connectivity with the EU.

KEY POINTS OF PROJECT IMPLEMENTATION

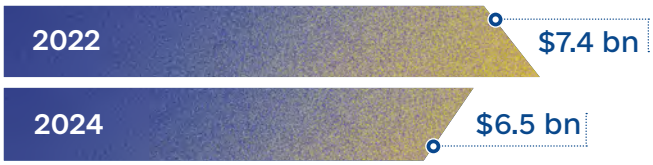

[1] The project information and financial indicators are provided by company-initiator of the project.

4.4 ICT AND DIGITAL SECTOR

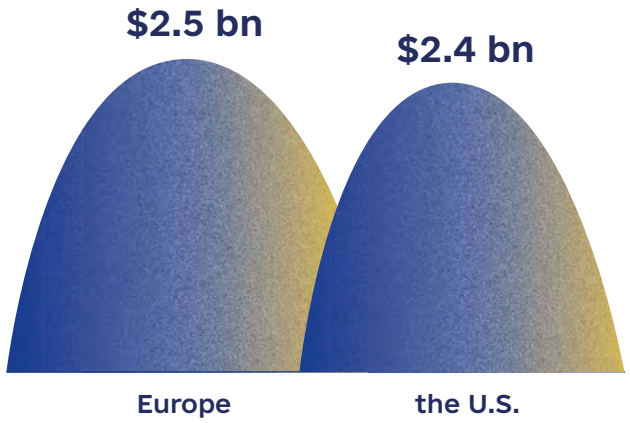

The IT industry remains **one of the key sectors of Ukraine's economy**, **demonstrating steady growth** even in a challenging environment. It provides significant export revenue and continues to adapt to obstacles while remaining competitive in the global market, as shown by the industry's average growth rate in recent years. **The CAGR in USD for the period 2019-2024 stands at +8.2%**. Ukraine's IT sector is almost entirely export-oriented (except for defence tech). Therefore, the size of export revenue is representative of the industry.

Ukraine's **IT services exports** grew from $4.2 bn in 2019 to $7.4 bn in 2022, then declined to $6.5 bn by 2024. Despite this, IT maintained a strong share of total service exports – rising from 24% in 2019 to 44% in 2022, and remaining high at 37% in 2024. This underscores the sector's resilience and key role in the national economy.

UKRAINE'S IT SERVICES EXPORT

The U.S. remains the dominant destination market for Ukrainian IT exports, accounting for $2.4 bn or approximately 45% of the total. European countries collectively represent around $2.5 bn, or 47%, indicating a strong reliance on Western markets. This balanced split between the U.S. and Europe reflects both deep integration into mature tech ecosystems and strategic geographic diversification.

The Ukrainian IT market shows a clear focus on commercially scalable segments, with the largest shares in fintech with 15.3% in 2024, e-commerce (13.8%), and business software (12.6%). HealthTech and EdTech also demonstrate strong positions, reflecting global digitalisation trends. Meanwhile, smaller shares in DefenceTech and AgriTech suggest untapped potential, especially given Ukraine's current challenges and economic profile. Overall, the market is diversifying, with a growing shift toward specialised, product-based IT solutions.

Despite the full-scale armed aggression of the russian federation against Ukraine, the **communications industry** is showing positive dynamics. Thus, in 2024, revenues from the provision of electronic communications services amounted to €2.52 bn compared to €2.46 bn in 2023. In the structure of revenues from the provision of electronic communication services in 2024, the largest shares were mobile communications - 62.6% and fixed Internet access - 20.8%, which amounted to €1.6 bn and €0.5 bn, respectively. The number of active mobile network identification cards as of December 31, 2024 was 48.8 mln units, which is 3% less than as of December 31, 2023.

In addition, network providers continue to develop the electronic communications sector by expanding existing and restoring damaged electronic communications networks. Accordingly, **capital investments in the electronic communications sector in 2024 amounted to €578 mln**, which is **20.9% more than in 2023.**

Ukraine's **startup ecosystem** is now **one of the three fastest-growing** in Central and Eastern Europe.

By 2024, the number of active startups exceeded 2,600, and the **total value of the ecosystem has tripled since 2020**. Most Ukrainian startups work in software and data, marketing and sales, and EdTech. Interest in funding has grown sharply – the number of applications to the Ukrainian Startup Fund rose from 0.9 thousand in 2019 to 10.5 thousand in 2024. This trend reflects both the increasing activity of entrepreneurs and growing trust in local support tools for innovation.

M&A activity in Ukraine's IT sector has significantly declined since its recent peak. In 2021, the market saw the highest value of deals since 2019 ($168.2 mln) alongside the largest number of transactions (24), reflecting strong investor interest and market confidence. However, by 2024, deal value dropped sharply to just $10 mln, despite 11 completed transactions – more than in 2020, which had only 8 deals. While interest in acquisitions persists, deal sizes have decreased significantly, likely due to wartime uncertainty, and a focus on smaller, strategic acquisitions rather than large-scale investments.

Over the past six years, Ukrainian IT companies have attracted nearly

$1.5 bn
in venture capital

with both deal volume and value showing strong growth. The number of **VC/PE deals rose from just 9 in 2019 to 56 in 2024**, while annual investment peaked at $538 mln in 2021 and remained high at $411 mln in 2024. **DefenceTech has become a leader in the number of venture capital deals with 20 deals in 2024**, receiving support from the government and private investors. Despite wartime disruptions, **investor interest has stayed resilient, with a particularly sharp rebound in 2023-2024 after a dip in 2022**.

This sustained activity reflects **growing confidence from both local and international investors**, positioning Ukraine as a competitive and attractive hub for venture capital in the tech sector.

SWOT-ANALYSIS

Strengths

- **Skilled workforce**: Over 300,000 IT professionals with strong technical education and English proficiency
- Tech companies are **actively exporting** to the US, EU and UK markets, ensuring broad access to international markets and a diversified client base
- IT companies maintain **strong global footprints**, with 71% employing staff or agents abroad and 54% running foreign representative offices
- **Maintained operations** and **service delivery** despite war-related disruptions
- Competitive pricing compared to Western markets
- **Strong tech ecosystem** includes local brands, startups, accelerators and R&D centers, actively collaborating with international partners
- **Digital Trade Agreement** with the UK and participation in **EU Digital Identity Wallet** efforts demonstrate international policy recognition
- **High mobile penetration**: over 90%, 4G (LTE) covers over 85% of the population
- Companies excel in **defence-tech**, drones, cybersecurity, alongside software and AI, reinforcing tech diversification

Weaknesses

- The ongoing war has c**onstrained domestic demand** and disrupted access to infrastructure and talent pools
- Legal and regulatory reforms, including e-governance, are **progressing slower** than Ukraine's ambitious digital goals, creating uncertainty for the sector
- **Early-stage funding remains limited**, with seed and Series A rounds trailing behind global peers
- **Insufficient intellectual property protection** undermines investor confidence and limits the ability to attract investment
- ICT sector's share of GDP remains **under 10%**, limiting domestic ecosystem development
- Tech infrastructure investments, including telecoms consolidation, are primarily focused on ensuring network resilience and wartime stability, but but **significant modernisation is still needed** to support digital growth
- **Academic-industry collaboration is at an early stage**, with limited integration of university R&D into the tech sector, slowing the growth of knowledge-based economy

Opportunities

- Growing **global demand** for digital solutions
- The **state-backed Diia.City** initiative has attracted 1,700 residents as of April 2025 and offers special legal status, tax benefits, intellectual property protection, reinforcing Ukraine's position as a competitive digital hub

Threats

- **Extended warfare** may disrupt critical digital infrastructure and human capital, and deter investment
- **Global competition**: rising competition from India, Poland, Romania, and Latin America
- **Decrease in the number of customers** in telecom industry

Opportunities

- The sector supports **EU nearshoring and digital sovereignty objectives** and offers potential access to new markets and funding through regulatory and policy alignment with the EU
- The **growth of defence-tech, drones, and cybersecurity** creates dual-use export opportunities of unique expertise driven by wartime innovation
- **Remote work trend** favors Ukrainian outsourcing
- Exportable experience in **public sector digitalisation**
- Further **development of 5G** after the end of the war

Threats

- **Cyber-attacks and digital warfare** remain a persistent national security challenge for the sector
- **Insufficient venture infrastructure** could limit scaling of promising startups
- **Delays in compliance with EU digital standards** (data protection, interoperability) risk limiting EU market access
- **Domestic macro instability** (power outages, inflation) adds operational uncertainty for tech R&D

GPON Construction Project

- **Brief Description:** Project delivers 1 Gbps broadband to over 1 million homes using energy-efficient fiber tech with blackout resilience. Integrated with mobile and B2B services, it supports rapid, modular expansion and national digital goals.
- **Products/Services:**
  - Vodafone Gigabit Net (GPON);
  - IPTV, VoIP, Wi-Fi services;
  - Value-added services (Smart Home, cybersecurity tools).
- **Technological Parameters Of The Project:**
  - GPON/FTTH with autonomous access capability;
  - Wi-Fi 6-ready equipment;
  - Migration from FTTx to GPON to optimise costs and energy use.
- **Project Strengths:** Resilient, vendor-diverse GPON network fully integrated with Vodafone's infrastructure, uniting mobile and fixed services for seamless connectivity.
- **Target Market:**
  - Mass residential market;
  - Small businesses and B2B clients;
  - Government institutions and critical infrastructure.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt financing**

Project Status: Active implementation. Infrastructure is being deployed in major cities with expansion planned in 2025 to five new urban centres.

- **Expected Financial Indicators**

NPV **$12.7 mln**	IRR **>20%**	Project launch period **3 years** (2030)
Revenue (annually) **$10.0 mln**	EBITDA (annually) **$5.0 mln**	DPP **6 years**

BUSINESS MODEL

- Mixed B2C and B2B fiber access (GPON) with subscription-based revenue and upsell of bundled services.
- CAPEX-driven model with monthly ARPU monetisation.

KEY PARTNERS

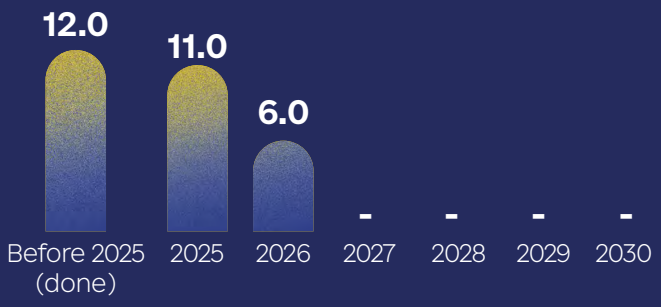

Equipment: GPON equipment vendors and Cisco, Zyxel, Raisecom, MikroTik;

Infrastructure: Extreme, Dell, Nokia, Juniper.

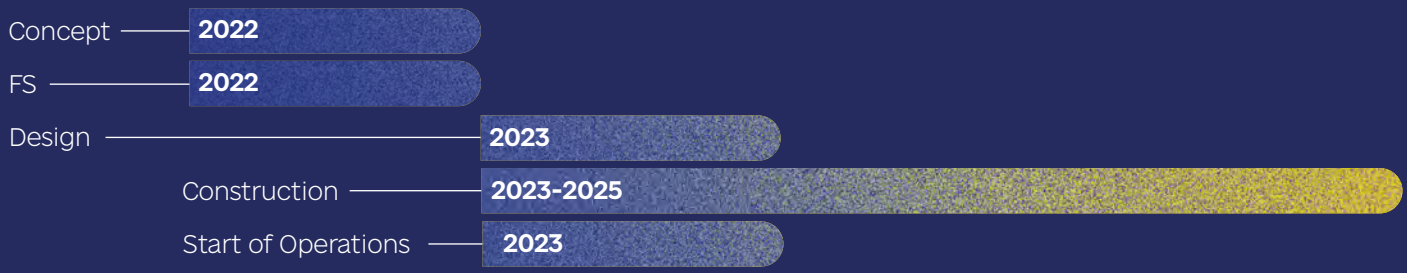

INCENTIVES

Supports Ukraine's Digital Strategy with resilient, energy-efficient broadband. GPON cuts power use, enables service during blackouts, boosts local jobs, and promotes digital equity.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

IT AND COMMUNICATIONS, DIGITAL INFRASTRUCTURE

VF UKRAINE PJSC

20 REGIONS

Mobile Network and 5G Projects

■ **Brief Description:** This strategic infrastructure programme focuses on modernising existing mobile networks and gradually deploying 5G-ready infrastructure across Ukraine. It includes LTE upgrades, new macro-sites, fiber backhaul, and preparation for 700 MHz and 3.5 GHz 5G rollout. The project supports national digitalisation goals and Ukraine's future integration into the European Digital Single Market.

■ **Products/Services:**

- Nationwide LTE and LTE-Advanced services;
- 5G Non-Standalone (NSA) architecture deployment;
- Support for mission-critical communications (e.g., emergency services, defense-related sectors).

■ **Technological Parameters Of The Project:**

- Dynamic Spectrum Sharing (DSS) and carrier aggregation;
- 5G-ready radio access networks (RAN) and software-defined core;
- Future deployment of URLLC, mMTC and slicing in targeted regions.

■ **Project Strengths:** One of the most comprehensive modernisation programmes in Ukraine's telecom sector, focused on blackout resilience, European-standard 5G compatibility.

■ **Target Market:** The project targets mass mobile users across urban, as well as industrial and logistics clusters. It also serves public sector needs including healthcare and emergency services, and provides advanced connectivity solutions for B2B segments such as energy, manufacturing, and transport.

BUSINESS MODEL

■ Data traffic increase of B2C and B2B services, growth of subscriber base and further monetisation through increased ARPU, 5G-enabled service tiers, enterprise connectivity (private networks), and government service integration.

KEY PARTNERS

Main global Single RAN suppliers, Ukrainian construction partners.

■ **Projects highlights[1], $ mln**

Financing structure:
CAPEX 100%

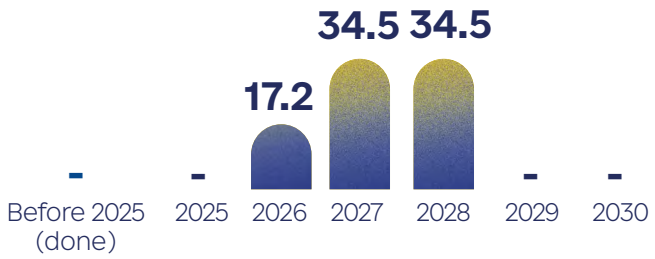

Type of financing:
loan / project / structured / donor or blended finance

Project Status: The project is under implementation stage. Feasibility study (FS) and technical planning have been completed. Radio network modernisation is ongoing, with 5G pilot preparation underway.

■ **Expected Financial Indicators**

NPV (10 years) **$24.4 mln**	EBITDA (2029) **$18.0 mln**	Project launch period **3 years**
Revenue (2029) **$29.5 mln**	IRR **20.1%**	DPP **8 years**

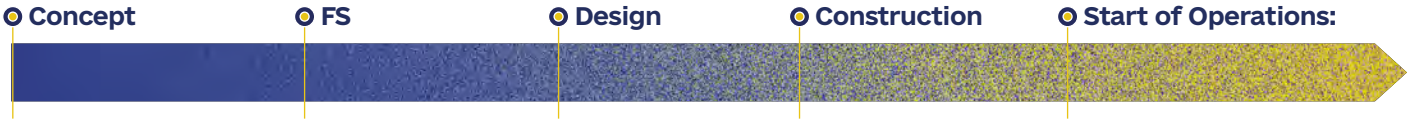

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project is potentially eligible for national infrastructure support programmes, reduced spectrum fees, and international digital development funding, including EU initiatives such as Digital Europe and Horizon Europe.

KEY POINTS OF PROJECT IMPLEMENTATION

Concept	FS	Design	Construction	Start of Operations:
Approved by Vodafone Ukraine Strategy Board	Internal analysis completed	5G pilot architecture finalised	Ongoing LTE modernisation, 5G site preparation in Kyiv, Lviv, Odesa	LTE upgrades – in progress; 5G test launch scheduled for 2025

MAINLY DEPEND THE SOLAR INSOLATION MAP

IT AND COMMUNICATIONS, DIGITAL INFRASTRUCTURE

VF UKRAINE PJSC

iSolar Solutions with Smart Management Systems for Telecom Base Stations

- **Brief Description:** Solar uses solar power and AI to cut Vodafone's energy use by 20%, extend uptime, and boost blackout resilience. Scalable to 1,200 sites, it supports Ukraine's energy decentralisation.
- **Products/Services:**
  - On-site solar energy systems (3–4 kW) with energy storage;
  - Option to integrate with generators or grid;
  - Smart EMS for real-time optimisation and load balancing;
  - Remote monitoring and reporting tools.
- **Technological Parameters Of The Project:**
  - iSolar PV panels, premium inverters and LiFePO4 batteries;
  - EMS with AI forecasting and multi-source energy flow control;
  - Modular and scalable architecture (solar, grid, diesel, wind);
  - Remote diagnostics and performance tracking.
- **Project Strengths:** iSolar delivers 22% annual energy savings, 4 extra hours of uptime, 3× longer battery life, and meets the February 2024 national security directive.
- **Target Market:**
  - Vodafone Ukraine infrastructure (indirectly), Ukrainian mobile users
  - Potential replicability for other Mobile Network Operators and infrastructure owners.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **loan / project / structured / donor or blended finance**

Project Status: Pilot completed on 3 sites with validated results. Scalable solution — ready for national-level deployment.

- 2024 (pilot phase)
- 2025 (expansion to 100 sites)
- 2026-207 (main phase)

- **Expected Financial Indicators**

NPV (7 years) **$1.3 mln**

IRR **27.8%**

EBITDA **$1.6 mln**

DPP **6 years**

Project launch period **3 years**

BUSINESS MODEL

- Internal infrastructure upgrade with CAPEX amortised over 5–6 years through energy cost savings, extended battery lifespan, and prospective participation in future VPP (Virtual Power Plant) markets.
- A hybrid B2B and grid-linked revenue model is also feasible.

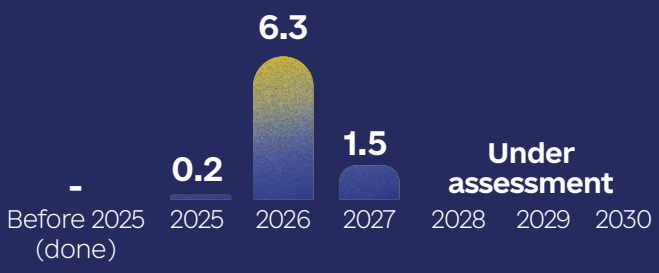

KEY PARTNERS

Leading global suppliers (hardware, EMS architecture), local EPC contractors, prospective co-investors (green energy funds, EU support, VPP aggregators).

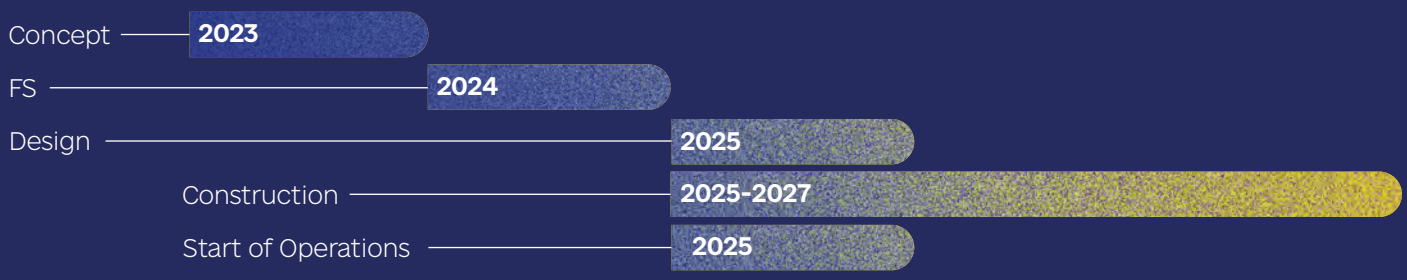

INCENTIVES

iSolar reduces CO_2 emissions and eases grid load by using solar energy. It ensures stable communication during blackouts and supports emergency response. The project aligns with Ukraine's 2050 Energy Strategy and regulatory standards.

INVESTMENTS IN THE PROJECT, $ MLN

WEST OF UKRAINE

IT AND COMMUNICATIONS, DIGITAL INFRASTRUCTURE

VF UKRAINE PJSC

Construction of Underground Tier III Data Centre

- **Brief Description:** Development of a secure, Tier III-certified underground data centre in a protected region of Western Ukraine to ensure digital resilience and hosting capacity for both commercial and national infrastructure.
- **Products/Services:** Colocation, disaster recovery, private/hybrid cloud hosting, secure telecom platform hosting.
- **Technological Parameters Of The Project:** Two-level underground design, 3 MW dual-source power, UPS backup, Tier III certified, ISO 27001-ready, VPP-compatible.
- **Project Strengths:** Secure geopolitically stable location, critical infrastructure for telecom & govcloud, modular and energy-resilient architecture.
- **Target Market:** Government entities, telecoms, fintech and IT providers, both Ukrainian and EU-based.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **project finance**

Project Status: At preparatory stage. Land optioned. Technical concept and geosurvey completed. Permit and design works in planning.

- **Expected Financial Indicators**

NPV	EBITDA	Project launch period
$27.4 mln	**$7.9 mln**	**3 years**
Revenue	IRR	DPP
$10.0 mln	**29.9%**	**9 years**

BUSINESS MODEL

- Hybrid model combining Vodafone's internal infrastructure needs with commercial colocation services for B2B and government clients.
- Revenue is generated through monthly rack rental and value-added service-based fees.

KEY PARTNERS

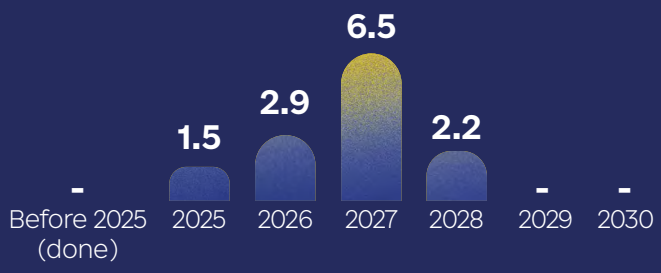

Equipment: global suppliers such as Vertiv, Cisco

Engineering: regional contractors with critical infrastructure experience

Financing: Open to partnership programmes and diverse financing sources, including grants and other blended instruments.

Strategic: Vodafone Group, local IT integrators.

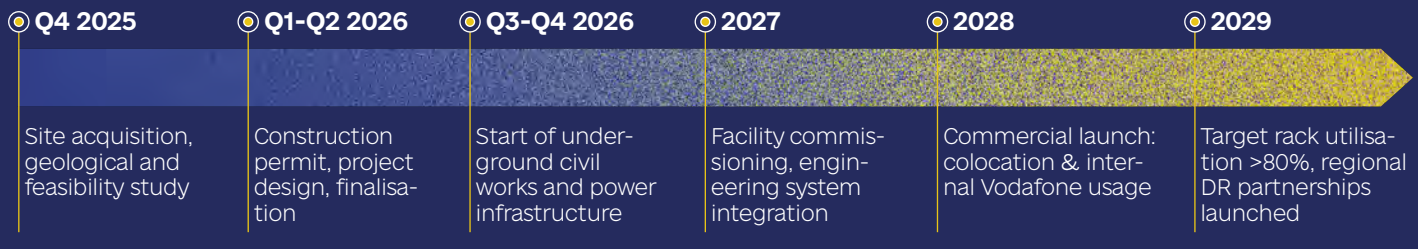

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

Project eligible for digital infrastructure grant applications; located in priority recovery region.

KEY POINTS OF PROJECT IMPLEMENTATION

INNOVATIVE SOLUTIONS FOR BUSINESS LLC

Soft4trans

- **Brief Description:** Soft4trans is a digital platform for automating logistics workflows. It adapts to business needs and unifies core functions – from route planning to document flow. Tested with 8 logistics firms and ready to scale.
- **Products/Services:** Soft4trans helps logistics companies manage deliveries, routes, documents, and analytics in one platform – reducing manual tasks and improving control.
- **Technological Parameters Of The Project:** The platform uses modular architecture, cloud infrastructure, and real-time automation tools. Built-in analytics improve decision-making. Designed for scaling, with plans for AI-based optimisation.
- **Project Strengths:** Tested with real clients and ready for scaling, Soft4trans offers fast ROI, strong profitability, and high relevance for EU logistics digitalisation.
- **Target Market:** Logistics and freight-forwarding SMEs in Ukraine and the EU seeking automation, cost reduction, and process transparency.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 32%
OPEX 68%

Type of financing:
grant & project financing

Project Status: The project is at the Seed stage. The MVP is live and piloted in 8 logistics companies, with positive early feedback and growing interest. Data collection supports further development. As a digital solution, it requires no physical infrastructure and is ready to scale.

- **Expected Financial Indicators**

NPV (3 years)
$1.1 mln

EBITDA (3 year)
$1.6 mln

Project launch period
2 years

Revenue (3 year)
$2.1 mln

IRR
74%

DPP
3 years

BUSINESS MODEL

- Revenue comes from project-based platform implementation, customisation, and support.
- Clients are logistics companies with complex operational needs.

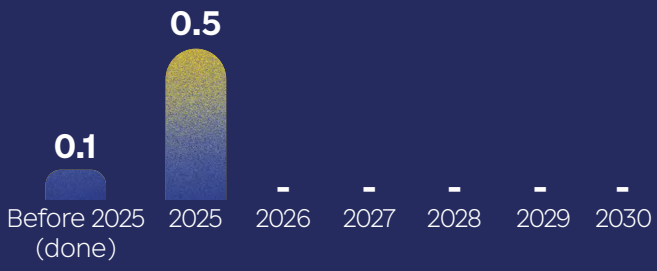

KEY PARTNERS

Carriers and logistics operators, transportation automation systems, CRM systems with which our product integrates, Banking systems for payment automation, Platforms for the exchange of customs documents and other logistics documents.

INCENTIVES

The project aligns with Ukraine's digital economy priorities and EU integration goals. It may be considered for participation in recovery and innovation grant programmes.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

B2B AGENCY LLC

PRE-ORDER

- **Brief Description:** PRE-ORDER is an integrated B2B/B2C platform that connects textile manufacturers with fashion brands and consumers, streamlining order management and production to create a seamless, sustainable supply chain.
- **Products/Services:** It connects Ukrainian clients with Italian fashion brands, with further scaling to other markets.
- **Technological Parameters Of The Project:** Super-app Concept. This innovative fashion industry model aligns with the EU Strategy for Sustainable and Circular Textiles, incorporating AI-driven demand forecasting, eco-friendly production methods and blockchain-enabled digital product passports to minimise waste, optimise resources and ensure full transparency throughout the product lifecycle.
- **Project Strengths:** Robust business model supported by a detailed financial model and a ready-to-share investment memorandum.
- **Target Market:** Fashion and textile e-commerce sector, focusing on B2B and B2C clients in Ukraine and the EU.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 22%
OPEX 78%

Type of financing:
equity, project finance

Project Status: The PRE-ORDER project is currently at Technology Readiness Level (TRL) 4, indicating that the technology has been validated in a laboratory environment.

- **Expected Financial Indicators**

Project Status: "TOCHMASH Innovation Hub is currently at the stage of developing project documentation and attracting grants and investment. Existing infrastructure include: city water supply and sewerage, electricity supply: 2 grid connections via "Kyivoblenergo". The current power is 3.6 mW , expandable to 11.0 mW. access roads of local importance.

BUSINESS MODEL

- "TOCHMASH Innovation Hub" will generate income through: sale and lease of commercial real estate, lease of specially equipped laboratories for training, research and prototyping, organisation of events.
- The project focuses on sustainable and innovative solutions to attract long-term partnerships and investment.
- TOCHMASH is an operating machine-building plant. The complex was planned and constructed in accordance with the requirements of the military industrial complex.
- The communication tunnel 3x3 is presented in the cite. The tunnel is 1,200 metres long and pass on through the complex with 3 entrance/exit. Location: 30-minute drive to Boryspil International Airport, 1-hour drive to Kyiv, Car accessibility via two roads: R-02 (regional) and T-1025 (territorial), connecting to the E-40 international highway.

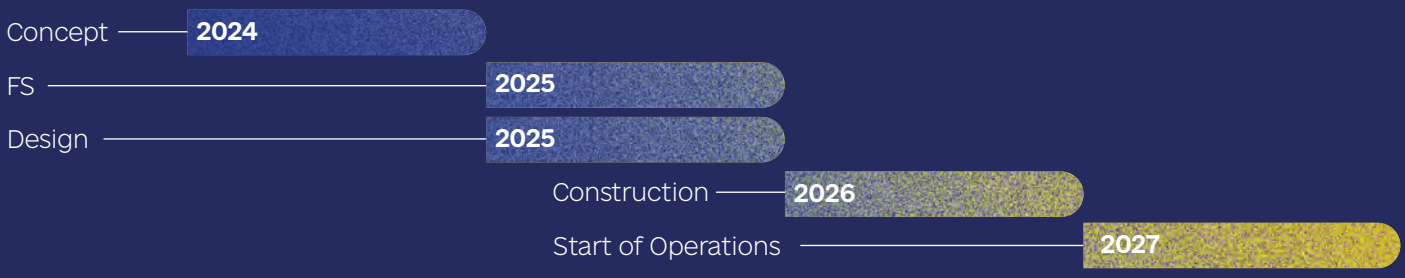

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

"TOCHMASH Innovation Hub" collaborates with Industrial partners: machine-building, agricultural companies, software and equipment developers. Educational institutions: National University of Bioresources and Nature Management of Ukraine, Ukrainian Association of Startups for R&D and Training.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

FINTECH COMPANY ACTIVITIS

WEAGRO & eDilo

- **Brief Description:** B2B BNPL is an embedded finance solution developed and launched in Ukraine under the eDilo and WEAGRO brands. It empowers producers and service providers to boost sales while enabling buyers to expand purchasing power and better manage cash flow. This online installment payment service facilitates immediate purchases with the flexibility to pay later.
- **Products/Services:** B2B BNPL is the unique financial instrument in the Ukrainian market that adapts factoring to meet the needs of businesses across various sectors.
- **Technological Parameters Of The Project:** A fully digital process that handles everything from application, convenient document workflow solution and scoring to e-signing and same-day fund transfer.
- **Project Strengths:** BNPL solution meets the need of businesses across all sectors, free for buyers, provides same-day online approval (in 30 minutes) and purchase financing, paperless transactions, enhances loyalty of business customers, boosts conversion rates.
- **Target Market:** Any Business-to-Business Transactions.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 25%
OPEX 75%

Type of financing:
debt, equity

Project Status: Launched under the eDilo brand and its agricultural counterpart WEAGRO, this initiative connects a network of over 180 partner suppliers, empowering business clients to make purchases through flexible installment plans.

- **Expected Financial Indicators**

NPV (5 years)
$169.0 mln

EBITDA (5 year)
$32.4 mln

Project launch period
launched in early 2024

Revenue (5 year)
$54.0 mln

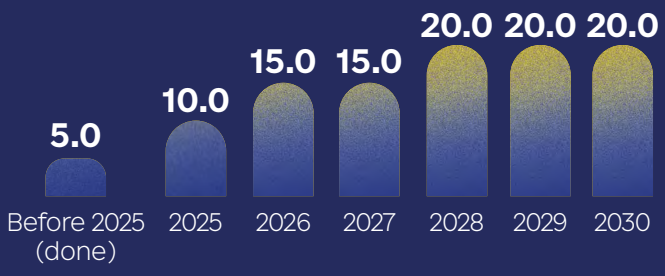

IRR
54%

DPP
2.9 years

BUSINESS MODEL

- The buyer selects products from the seller and opts for the Activitis BNPL payment option. Activitis verifies the buyer's identity and creditworthiness using only their Enterprise ID.
- The buyer and seller then sign a purchase agreement, which includes the installment payment schedule. Activitis finances the transaction by paying the seller upfront (minus a service fee) through factoring. The buyer repays Activitis in accordance with the agreed installment plan.

INVESTMENTS IN THE PROJECT, $ MLN

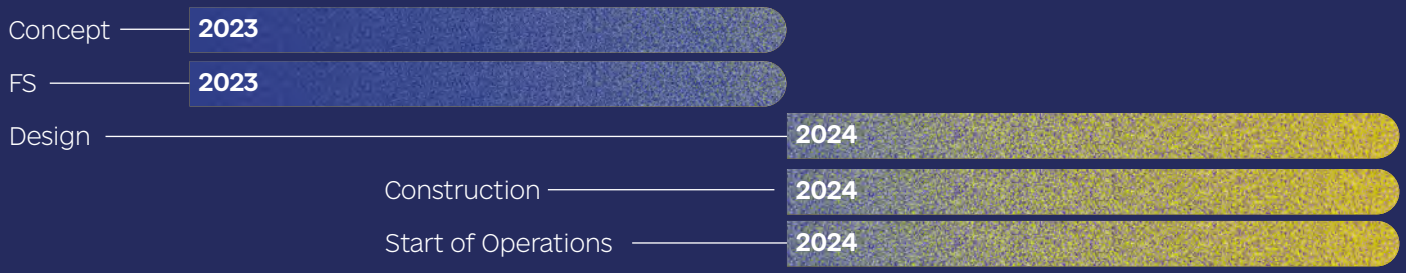

KEY PARTNERS

LNZ Group, WOG, MHP, Soufflet Agro, UKRAVIT, Agro Arena, Frendt, Titan Machinery, Lidea, Alfa Smart Agro, KTC, Plastics, Sport Life, iSpace, Carefield, Budpostach, Ukrainian Weighing Company, Textile Contact, USAID AGRO, 89 Global.

INCENTIVES

Ukraine's parliament is on the way to pass the "Law on Factoring" to facilitate industry's growth and trade factoring promotion.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

IT AND COMMUNICATIONS, DIGITAL INFRASTRUCTURE

STETMAN LLC

UASAT | Ukrainian satellite constellation LEO

- **Brief Description:** Creating an autonomous satellite network as a strategic replacement for the critically dependent Starlink channel.
- **Products/Services:** UASAT service provides high-speed satcom Internet access on-the-move.
- **Technological Parameters Of The Project:** UASAT is an independent satellite network consisting of 2 orbital belts at 32° and 37° East longitude, each with 30 minisatellites, planned to be created within the global OneWeb or Telesat structure.
- **Project Strengths:** Super compact UASAT terminals provide a significant advantage for use on UAVs and other drones, vehicles and pedestrian missions.
- **Target Market:** The main market is Ukraine, which currently consumes, for example, Starlink more than all of Europe. Additionally - within orbit: Turkey, Israel, etc.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 84%
OPEX 16%

Type of financing:
debt, project finance

Project Status: Project stage concept, consultations with contractors and participants.

- **Expected Financial Indicators**

NPV (5 years)
$224.0 mln

EBITDA (5 year)
$533.0 mln

Project launch period
1.5 years

Revenue (5 year)
$573.0 mln

IRR
73%

DPP
3 years

BUSINESS MODEL

- The business model is based on providing high-speed satellite internet via a network of low-orbit satellites.
- The main revenue is generated from military users, infrastructure enterprises and business users.

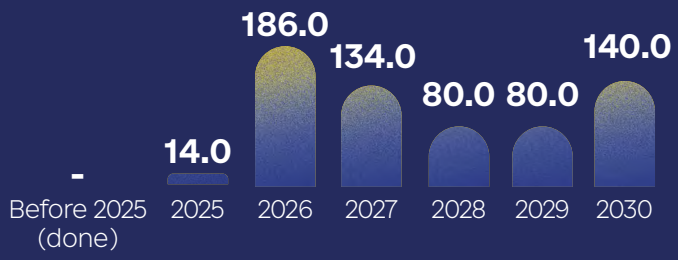

KEY PARTNERS

Eutelsat OneWeb, Telesat, Airbus Defence and Space, Thales Alenia Space, Hughes, the government of Ukraine, France and Canada, the Ministry of Defence of Ukraine.

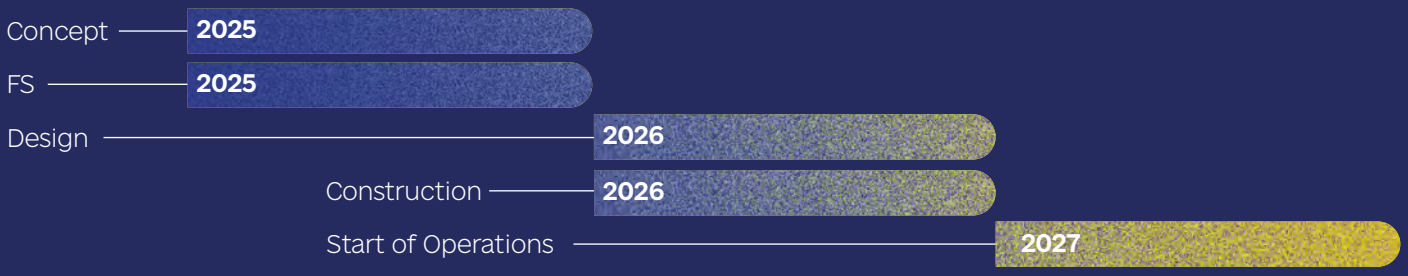

INCENTIVES

- The project will be located in Diia.city.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

IT AND COMMUNICATIONS, DIGITAL INFRASTRUCTURE

STETMAN LLC

UASAT | Ukrainian satellite constellation LEO

- **STETMAN LLC** is a Ukrainian innovative company in the field of electronic communications and defence technologies. It combines deep engineering expertise, experience in implementing critical projects during wartime, and a strategic vision for sovereign infrastructure. Key competencies include satellite communications (Starlink, OneWeb, UASAT GEO), sovereign satellite platforms (UASAT LEO), defence solutions (STARMOD terminals, UAV and naval drone integration), and in-house R&D and production facilities in Ukraine. The company employs over 120 specialists and continues to grow.

Dmytro Stetsenko
Chief Executive Officer

Leads strategic development and government relations. Has hands-on experience building hardware-software systems for urban infrastructure, transport, military equipment and military satellite technologies.

Maksym Datsenko
Chief Operating Officer

Expert in strategic planning and market development across Eastern Europe and CIS, with a track record of delivering complex tech projects. Former executive at Fujitsu, Huawei, SAP, and Cloudfresh.

Volodymyr Stepanets
Chief Product Officer

Over 30 years in IT infrastructure. Led DevOps and SRE at MacPaw and EPAM. Founder of “Narodny Starlink” and a key voice in satellite communications for Ukraine’s defence sector.

Volodymyr Gerashenko
Head of R&D department

Deep expertise in satellite, MPLS, VoIP, DWDM, and mobile networks. Leads design and deployment of advanced telecom systems.

Tetyana Rychenko
Chief Financial Officer

25+ years in accounting and finance across industries. Specialises in tax reporting, financial strategy, and international operations.

Oleksandr Levytskyy
Chief Manufacturing Officer

Engineer and strategic thinker who launched three defence production facilities from scratch. Transforms complex technical concepts into precise, scalable systems.

IT AND COMMUNICATIONS, DIGITALISATION OF THE ECONOMY

FAKTORIST UKRAINE LLC

FAKTORIST

- **Brief Description:** B2B marketplace connecting over 15,000 verified Ukrainian manufacturers with global buyers via AI platform. Accelerating economic recovery through verified trade and end-to-end export solutions.
- **Products/Services:** B2B Marketplace with AI agents matching, over 30,000 verified products, export solutions (logistics, payments, docs), UAmbassador referral programme.
- **Technological Parameters Of The Project:** Applies advanced AI (agents, automation) and digital verification leveraging a vast trade database to boost traditional export processes, making them accessible to all. Vision for Blockchain transparency.
- **Project Strengths:** Access to over 15,000 manufacturers via AI. This platform is primed for rapid global scaling and high-impact growth in export trade.
- **Target Market:** Global buyers seeking Ukrainian Industrial & Food/Beverage products (Europe, North America, MENA, Asia).

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 33%
OPEX 67%

Type of financing:
equity

Project Status: Idea validated. Platform integrating traditional sales processes boosted by AI, with a vision for Blockchain transparency. Ready for global scaling with investment.

- **Expected Financial Indicators**

NPV (6 years)
$16.6 mln

EBITDA (6 year)
$5.3 mln

Project launch period
1 year

Revenue (6 year)
$9.6 mln

IRR (6 years)
54%

DPP
4.1 years

BUSINESS MODEL

- We use a mixed revenue model based on subscriptions to the marketplace and fees on international trade deal execution.

KEY PARTNERS

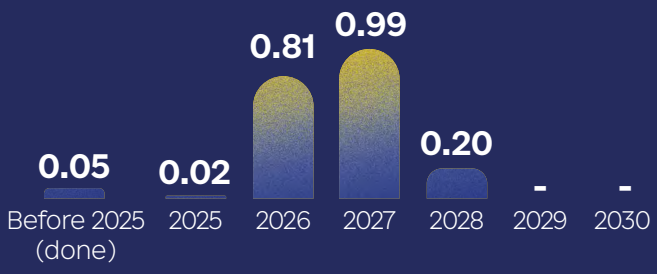

Suppliers: easy access to potential over 15,000 exporters (manufacturers) from Ukraine.

Clients: EU and global customer base.

Partners: private, governmental and NGO business support institutions, consultants, service, finance and insurance companies.

Technologies: E-commerce adapted websites and databases, IT optmised workflows, AI agents and bots, software for electronic data interchange.

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

Our company is a resident of special tax regime for IT companies DIIA CITY. https://city.diia.gov.ua/en .

Low labour taxes (5% income tax, 5% military, plus social contribution 22% based on minimum wage). Corporate tax: 9% on exit capital.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

IT AND COMMUNICATIONS, AI & SOFTWARE DEVELOPMENT

POSTUP FOUNDATION

in cooperation with Postup Solutions (PL) and Postup Services LLC (UA)

MinesEye

- **Brief Description:** AI-powered drone system automating detection and verification of hidden explosive hazards, ensuring faster and safer clearance operations. It precisely maps landmine locations, enabling data-driven prioritisation of costly mechanical demining resources and significantly accelerating land release.
- **Products/Services:** MinesEye will provide aerial reconnaissance services to demining operators for both qualitative & quantitative assessment of landmine-contamination in the form of geophysical maps & orthophoto imagery of unexploded ordnance (UXO), explosive remnants of war (ERW) & other hazardous objects
- **Technological Parameters Of The Project:** We combine drone-mounted magnetic & optical sensors and AI with optical recognition for detection of diverse UXO-types. Visual mapping capability from 4 m above the ground is combined with magnetic noise-reduction by 95% by a patent-pending mechanical suspension system.
- **Project Strengths:** Proven in real-world use: MinesEye was used to survey 400 hectares during experimental deployment with the State Emergency Service of Ukraine. The efficacy for detecting engineering minefields and UXO has been proven; effective terrain-following & wind resistance up to 8 m/s, with 2 hectare/hour productivity.
- **Target Market:** Target market includes national/international mine action operators & national emergency services. Primary customers are those working in post-conflict zones requiring large-scale land clearance.

Projects highlights[1], $ mln

Financing structure:
CAPEX 42%
OPEX 58%

Type of financing:
equity, project finance

Project Status:

- **Stage:** Under experimental deployment.
- **Construction/Preparation:** Over 150 field tests completed; MoU signed with the State Emergency Service of Ukraine (SESU); 4 experimental unmanned aerial systems (UAS) platforms already assembled.

Expected Financial Indicators

NPV (6 years)
$21.5 mln

EBITDA (6 year)
$11.4 mln

Project launch period
2025

Revenue (6 year)
$42.2 mln

IRR
89%

DPP
5 years

BUSINESS MODEL

- Nearly 200 mechanical demining machines worth $150 mln (at a rate of $0.70 million/machine) in Ukraine require reconnaissance data - a sustainable business model is ensured on the basis of clearance cost reduction from current $1,500-3,500/hectare to about $700/hectare. Revenue comes from equipment sales, service contracts, and ultimately SaaS provided to mine action operators.

INVESTMENTS IN THE PROJECT, $ MLN

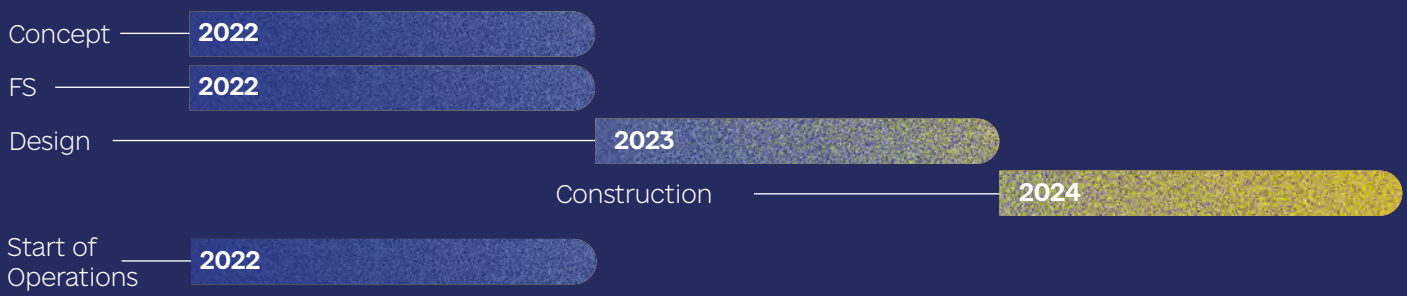

KEY PARTNERS

Key partners include SESU (State Emergency Service of Ukraine), UNDP, NATO, The HALO Trust, Norwegian People's Aid, and academic institutions such as the Institute of Geophysics in Ukraine, Wrocław University of Science and Technology, Lviv Polytechnic, and Łukasiewicz–ILOT. Equipment and R&D support come from consortium partners and external service providers.

INCENTIVES

MinesEye has benefited from international institutional funding (NATO SPS, UNDP) & operational support through formal agreements with Ukrainian authorities. Postup Solutions is a resident of Wroclaw Technology Park; eligibility for governmental incentives may be explored.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

IT AND COMMUNICATIONS, DIGITAL INFRASTRUCTURE

ROCK IT LLS (UA), MISTO INC (USA)

MISTO

- **Brief Description:** MISTO is a City-as-a-Service platform that ensures cities are safe, resilient, and prosperous. It provides a direct and trusted communication channel between cities and citizens.
- **Products/Services:** MISTO provides a SuperApp for citizens to access smart mobility, e-democracy, and city services, alongside a web platform for authorities with real-time monitoring for data-driven decisions.
- **Technological Parameters Of The Project:** MISTO is powered by Creatio for city management and Microsoft Azure for secure, scalable cloud infrastructure.
- **Project Strengths:** MISTO enhances city operations by integrating with existing municipal systems, enabling smarter resource management and proactive decision-making.
- **Target Market:** MISTO targets cities with populations of 10,000+ in Ukraine, USA, Saudi Arabia, Indonesia and the LATAM.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 45%
OPEX 55%

Type of financing:
equity or project financing

Project Status: Stage 1 fully operated, continue to develop additional services according to product roadmap.

Current Progress: Platform launched in Odesa, preparing for rollout in five more cities.

- **Expected Financial Indicators**

NPV (5 years) **$24.2 mln**

EBITDA (5 year) **$93.8 mln**

Project launch period **1.5 years**

Revenue (5 year) **$177.3 mln**

IRR **63%**

DPP - **2.5 years**

WACC - **30%**

BUSINESS MODEL

- MISTO operates on a subscription-based model, offering modular services to municipalities with flexible pricing based on city size and service usage.
- Additional revenue streams included: consulting & implementation work, commission from payment operation, target advertainment.

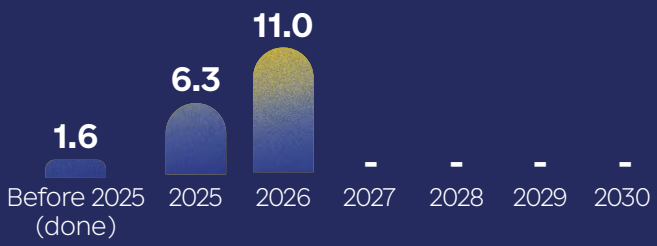

KEY PARTNERS

Microsoft Azure for cloud infrastructure, Creatio for no-code automation, Google for map related services. We collaborate with municipal administrations for implementation and local adaptation, public transport operators, cities utility services companies to ensuring seamless integration with existing urban systems.

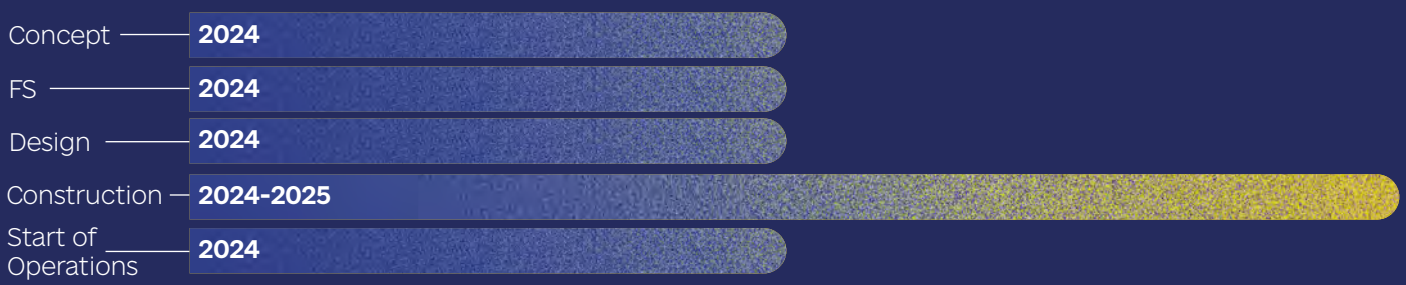

INCENTIVES

- ROCK IT LLC is the part of DIIA.CITY Community.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

4.5 CRITICAL RAW MATERIALS SECTOR

Ukraine hosts deposits of **22 out of the 34 critical raw materials** identified by the European Union. These materials play an indispensable role in the production of advanced technologies, and their shortage would have significant implications for both economic resilience and national security. Ukraine possesses substantial potential for CRM extraction and utilisation, particularly in light of rising global demand associated with the green energy transition, high-tech innovation, and strategic applications - notably in the aerospace and defence sectors.

The country benefits from a well-established mining sector, which provides a solid foundation for the development of critical raw materials (CRM) and strategic raw material (SRM) production. Prior to the full-scale invasion, mining and metallurgy accounted for **over 6%** of Ukraine's GDP. Ukraine also has a strong tradition of engineering excellence and a technically skilled workforce capable of delivering complex mining and metallurgical projects, including the extraction and processing of non-ferrous metals. Before the war, Ukraine ranked among the world's leading producers of several CRMs - including titanium ore, titanium sponge, titanium dioxide (TiO_2), titanium ingots and slabs, graphite, manganese, and uranium.

In 2025, under the Ukraine Facility Plan, the Law of Ukraine No. 4154-IX[21] – On Updating the National Programme for the Development of the Mineral Resource Base of Ukraine until 2030 and Regulating Certain Issues Related to Mineral Resources and Components of Strategic and Critical Importance – entered into force.

This legislation introduced a State Compensation Fund for geological exploration, financed through royalty payments and fees for special permits. It also formally defines critical and strategic raw materials, mandates regular risk assessments related to their supply, and aligns national legislation with EU standards. The law strengthens subsoil use regulations via mandatory auctions or production sharing agreements (PSAs) and establishes stricter environmental compliance requirements alongside the digitalisation of geological data.

Also in 2025, Ukraine and the United States signed an agreement establishing the United States-Ukraine Reconstruction Investment Fund[22], structured as a limited liability partnership.

This Fund provides both the institutional and financial foundation for developing Ukraine's CRM/SRM sector. Ukraine **will contribute 50% of revenues** from newly issued extraction licences, while the United States will provide capital investments, including a share of military assistance. Operating on a parity basis, the Fund guarantees favourable tax, currency, and regulatory conditions for investors, supports PSA implementation and feasibility studies, and promotes integration into transatlantic CRM/SRM supply chains. This agreement marks a major step towards unlocking large-scale investment into Ukraine's critical materials sector.

Further investment opportunities arise through Ukraine's Large-Scale Privatisation programme[23], which includes strategic CRM-sector assets such as:

Demurinsky Mining and Processing Plant LLC

a titanium feedstock producer

Sumykhimprom PJSC

a leading producer of titanium dioxide

Zaporizhzhia Titanium and Magnesium Combine LLC

the only titanium sponge manufacturer in Europe.

In 2024, the privatisation of United Mining and Chemical Company JSC[24], a key titanium feedstock enterprise, was successfully completed, with NEQSOL Holding emerging as the winning bidder. The company is currently working on a long-term strategic growth plan.

[21] - Law of Ukraine No. 4154-IX
[22] - Cabinet of Ministers of Ukraine Order No. 416-r of 30 April 2025
[23] - Cabinet of Ministers of Ukraine Order No. 36-r of 16 January 2019
[24] - Cabinet of Ministers of Ukraine Order No. 1010-r of 11 October 2024

SWOT-ANALYSIS

Strengths

- **CRM/SRM reserves:** Ukraine holds deposits of titanium, graphite, lithium, beryllium, zirconium, and uranium – all recognised as critical raw materials by both the EU and the United States
- **Extensive energy infrastructure:** Existing nuclear, hydro and thermal power plants, alongside a rapidly expanding renewable energy sector, ensure energy stability and low-carbon electricity generation
- **Established industrial base:** Existing mining, metallurgical and chemical enterprises can be upgraded with modern technologies for CRM/SRM processing
- **Strong technical education:** Ukraine has well-established academic traditions in engineering, geology and materials science, supporting industrial development
- **Strategic geographic location:** Ukraine's proximity to the European Union facilitates integration into secure and resilient supply chains

Weaknesses

- **Limited geological exploration:** Many deposits are insufficiently explored or lack reliable and up-to-date geological data acceptable to international investors
- **Complex permitting and land use procedures:** Lengthy and non-transparent regulatory processes delay the initiation of new projects
- **Dependence on foreign technologies:** The sector remains reliant on imported equipment, proprietary technologies and external technical expertise
- **High energy and material intensity:** Existing industrial processes are often outdated and fail to meet contemporary environmental and efficiency standards
- **Security risks:** The ongoing conflict presents elevated investment risks, with increased costs for insurance, physical protection and operational resilience

Opportunities

- **Institutional partnerships with the EU and US:** Opportunities to access grants, blended finance and technical assistance via instruments such as the CBAM, Development Finance Corporation, and Horizon Europe
- **Development of specialised clusters and industrial parks:** Creating dedicated zones for CRM/SRM extraction, processing and advanced manufacturing could generate significant synergies
- **Integration into EU strategic autonomy:** Ukraine has the potential to become a reliable alternative source of critical materials, reducing Europe's dependence on China and russia
- **Expansion of value-added processing:** Potential to establish domestic production of graphite anodes, titanium and magnesium powders, and other advanced material inputs
- **Circular economy integration:** Recovery of CRM/SRM from industrial residues, tailings, and e-waste aligns with EU environmental priorities and resource efficiency objectives
- **Establishment of an open-access geological data portal:** Would enhance transparency and attract exploration investment by providing reliable resource information

Threats

- **Global dependence on China:** The dominance of China in the CRM market creates risks related to price manipulation, technological dependency and politically motivated trade restrictions
- **Ongoing war or escalation of conflict:** Physical and logistical disruptions, infrastructure damage and a deterioration of investor confidence are major risks
- **Institutional capacity constraints:** Limited technical expertise within public institutions to regulate and support the development of modern CRM/SRM value chains
- **Lack of policy coordination:** Weak inter-ministerial and inter-regional coordination may hinder the effective implementation of national CRM/SRM strategies
- **Shortage of skilled labour:** Migration, demographic decline and brain drain are contributing to a lack of qualified specialists in relevant technical fields

CRITICAL RAW MATERIALS SECTOR

KIROVOHRAD REGION

CRITICAL MATERIALS, MINING & PROCESSING

BGV GROUP MANAGEMENT LLC

BGV GRAPHITE: Concentrate Production

- **Brief Description:** Development of the Balakhivka graphite deposit with 44.0 million tonnes of NI 43-101-compliant reserves within the licensed area (185.0 million tonnes total explored reserves). The project includes construction of a mine with a 29-year life of mine (extendable) and a graphite concentrate plant with a base capacity of 50.0 thousand tonnes per year.
- **Products/Services:** Graphite concentrate with 95%+ C purity.
- **Technological Parameters Of The Project:** Technology for graphite concentrate production developed by ANZAPLAN Dorfner Group (Germany) with application of EU standards.
- **Project Strengths:** Designated as a Strategic Project under the EU Critical Raw Materials Act (June 4, 2025), supported by developed logistics infrastructure and close proximity to EU market consumers. Advanced technical readiness.
- **Target Market:** European Union countries, North America, Asian market.
- **Expected Financial Indicators**

NPV **$169.0 mln**	EBITDA* **$26.9 mln**	Project launch period **4.5 years**
Revenue* **$52.0 mln**	IRR **35%**	DPP **5.1 years**

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 88%
OPEX 12%

Type of financing:
60% debt,
40% equity

Project Status: The Preliminary Economic Assessment, the initial Pre-Feasibility Study, and its updated version were completed by 2023. Pilot tests for the concentrator plant were successfully finalised in 2024. Basic engineering design was completed in the second quarter of 2025.

The project is currently at the Feasibility Study stage under Ukrainian standards, which includes Stage 1 – Technical and Economic Assessment and Stage 2 – Design.

It demonstrates a high level of technical readiness and is open for strategic partnerships and investment.

BUSINESS MODEL

- Development of a graphite mining and processing plant, followed by downstream SPG production for Li-ion battery anodes - targeting full graphite value chain integration.

KEY PARTNERS

- Technology and equipment suppliers from the EU: Dorfner ANZAPLAN (Germany), Metso (Finland), NETZSCH (Germany), K-MINE (Ukraine).
- Financing: Targeted financing from IFIs and strategic investors.

INCENTIVES

Eligible under the UkraineInvest incentive program; officially recognised as the only EU Strategic Project located in Ukraine under the CRMA framework.

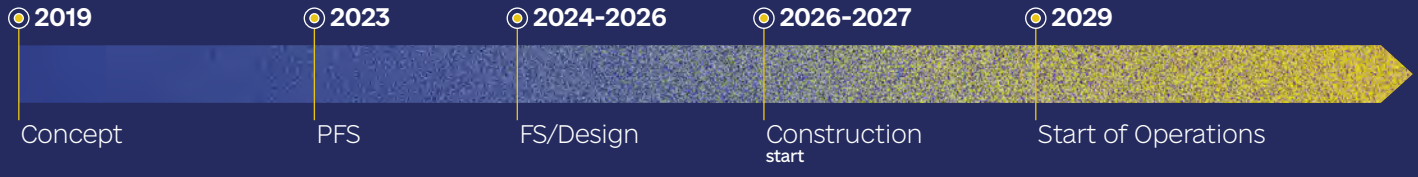

INVESTMENTS IN THE PROJECT, $ MLN

CONSUMERS

Steel and refractory industries, SPG and AAM producers in the EU.

* Average over Life of Mine.

KIROVOHRAD REGION

CRITICAL MATERIALS, MINING & PROCESSING

BGV GROUP MANAGEMENT LLC

BGV GRAPHITE: Spherical Purified Graphite

■ **Brief Description:**

- Construction of a spherical graphite plant to lock in full graphite value chain.
- Production of 19.0 thousand tonnes of Spherical Purified Graphite (SPG) in basic scenario for Li-ion battery anodes.

■ **Products/Services:** SPG for Li-ion battery anodes and advanced Active Anode Materials, including Coated Spherical Graphite (AAM/CSPG), purified micronised graphite for special high-value applications.

■ **Technological Parameters Of The Project:** Technology for SPG production developed by German and USA companies as more ecological alternative to the existing conventional SPG technology with application of EU standards.

■ **Project Strengths:**

- Officially recognised as a Strategic Project under the EU Critical Raw Materials Act (CRMA). Key alternative source of SPG for EU Li-ion battery producers. Efficient logistics and close access to EU markets.
- Flexible production: capacity can be doubled within the current project footprint based on market demand.

■ **Additional scalability:** The group also controls the Zarichna Area of the Zavallivske graphite deposit, providing further long-term growth potential (detailed information available upon request).

■ **Target Market:** EU, North America, and Asia.

■ **Projects highlights[1], $ mln**

Financing structure:
CAPEX 96% / OPEX 4%

Project Status: The Preliminary Economic Assessment and the Pre-Feasibility Study were completed by 2023. Pilot testing for the upstream concentrator was successfully finalised in 2024. A trade-off study is currently underway to compare two environmentally friendly processing technologies and identify the most cost-effective solution.

Based on the results of this analysis, an updated version of the Pre-Feasibility Study is expected to be completed in 2026.

The project is actively seeking strategic partners and investors.

■ **Expected Financial Indicators[2]**

NPV **$200.0 mln**	EBITDA* **$53.0 mln**	Project launch period **6 years**
Revenue* **$108.0 mln**	IRR **15.2%**	DPP **9 years**

BUSINESS MODEL

■ Downstream production of SPG for Li-ion battery anodes to complete the full graphite value chain, with future potential for AAM production.

KEY PARTNERS

EU-based technology and equipment suppliers: Dorfner ANZAPLAN (Germany), Metso (Finland), AETC (USA), SGS (Canada).

FINANCING

■ Targeted financing from IFIs and strategic investors.

CONSUMERS

■ AAM, anode and battery producers across the EU.

ZHYTOMYR REGION

BGV GROUP MANAGEMENT LLC

BGV BERYLLIUM

- **Brief Description:** The project focuses on the development of the Perha (Perzhanske) complex beryllium deposit in northern Ukraine. This is a highly explored asset with 2.4 million tonnes of ore reserves at 0.59% BeO within the licensed area, including:
  - 14.0 thousand tonnes of beryllium oxide (BeO), equivalent to approx. 5.0 thousand tonnes of beryllium metal;
  - 39.7 thousand tonnes of zinc to be recovered as a by-product.

  The project involves a combination of open-pit and underground mining.
- **Products/Services:**
  - Beryllium oxide, beryllium metal, and specialty alloys.
  - By-products: zinc, potentially rubidium, rare earth elements (REE), and silver.
- **Technological Parameters Of The Project:** Ukraine possesses the scientific and industrial expertise to produce ultrapure beryllium and finished products such as beryllium foil, wire, and powders for powder metallurgy and 3D printing applications.
- **Project Strengths:** European alternative for limited CRM sources amid globally limited beryllium supply - critical for defense, aerospace, electronics, and magnets. Strategic location for EU customers with direct highway and railway access.
- **Target Market:** EU, North America, and Asia.

- **Projects highlights[1], $ mln**

Required financing (PEA estimates) 300.0 | 300.0 Total budget (depending on the final products portfolio)

Financing structure:
CAPEX 100% / OPEX 4%

Project Status: Currently the project is in the Pre-Feasibility Study stage, started in Q1 2024. Reserves estimated under NI43-101. Pre-Feasibility Study accomplishment - Q3 2025.

Pilot tests based on the proven technology for concentrator and hydrometallurgical plants start Q4 2025.

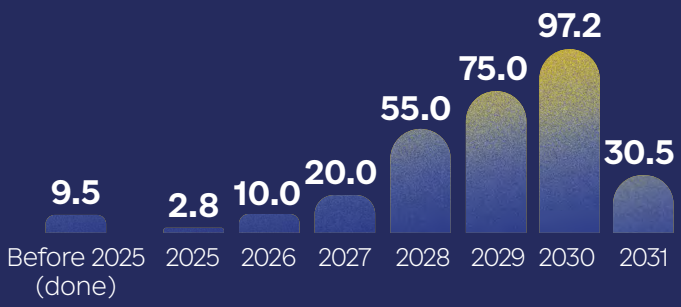

- **Expected Financial Indicators**

NPV	EBITDA	Project launch period
on request	**on request**	**on request**

CRITICAL MATERIALS, MINING & PROCESSING

VELTA MINERALS LLC

Ukrainian Critical Raw Materials Cluster. Phase 1

- **Brief Description:** The Ukrainian Titanium Cluster, led by Velta Holding, is a strategic industrial initiative aimed at restoring Ukraine's position in global markets of critical raw materials (CRM) and high-tech titanium products. Phase 1 focuses on expanding production of strategic minerals: titanium, zircon derivatives, and hafnium.
- **Products/Services:** 150 thousand tonnes per year of ilmenite; 500 tonnes per year of zirconium oxide; 10 tonnes per year of metallic zircon; 10 tonnes per year of hafnium; 500 thousand tonnes per year kaolin; 800 thousand tonnes per year clay; 900 thousand tonnes per year sand.
- **Technological Parameters Of The Project:** Comprehensive extraction of mineral resources from the ore body into marketable products, including separation, drying and refining process for ilmenite. Chemical processing, including cleavage, precipitation and separation for zircon derivatives and hafnium.
- **Project Strengths:** The project reduces reliance on Chinese CRM supply, boosting geopolitical independence for Ukraine, the EU, and the US, spurs regional development in war-impacted Ukraine, meets rising CRM demand in key sectors, pioneering green mining and circular production and strengthening EU value chains via advanced R&D and full vertical integration. The possible content of additional critical materials, particular Rare Earth Elements, in the ilmenite deposits.
- **Target Market:** Titanium, zircon oxide and metallic zircon, hafnium, kaolin, clay and sand markets in Ukraine, Europe, United States.

Projects highlights[1], $ mln

Financing structure: **CAPEX 100%**

Type of financing: **convertible debt, equity Series A-B**

Project Status: Velta began geological exploration of the Likarivske titanium deposit in 2012, drilling 147 wells and completing a Scoping Study. Reserves were confirmed by Ukrainian Mineral Reserves Authority in 2016, leading to a Special Extraction Permit granted in 2019 and finalised through a 2023 subsoil usage agreement.

Expected Financial Indicators

NPV **$299.0 mln**

EBITDA (3rd year) **$95.0 mln**

Project launch period **1.5 years**

Revenue (3rd year) **$230.0 mln**

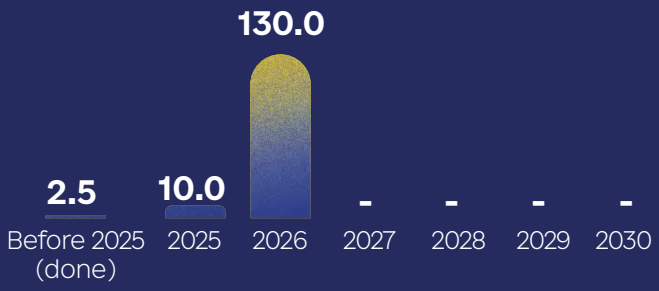

IRR **47%**

DPP **5.5 years**

BUSINESS MODEL

- Comprehensive processing of mineral resources into high-quality, high value-added products, along with by-products that are critical for strategic sectors of EU, US and Ukraine.
- Production of nuclear-grade metallic zirconium and hafnium under metallothermic technology.
- A full-cycle manufacturing process for the production of final components used for critical applications.

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

Ukrainian Institute of Titanium, Precheza a.s, Traxys USA, Wardell Armstrong, SmarTech. Taking the lead role in Horizon Europe REPTiS project, Velta holds the proprietary technology for metal powders and customised alloys production. We are in a direct dialog with leading IFIs for Technical Assistance, Equity Partnership, PRIs and Project Financing.

INCENTIVES

The project will be located in the industrial park, centered around an ore deposit near the currently operating unit. Enrichment plants and loading hub will be based at the reindustrialised Novomyrhorodska coal mine, which is situated in close proximity to the site and railway.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

KIROVOHRAD REGION

CRITICAL MATERIALS, HIGH VALUE-ADDED PRODUCTS

VELTA TITANIUM METAL LLC

Titanium Powders, Alloys and Finished products. Phase 2

- **Brief Description:** The Ukrainian Titanium Cluster, led by Velta Holding, is a strategic industrial initiative aimed at restoring Ukraine's position in global markets of critical raw materials (CRM) and high-tech titanium products. Phase 2 focuses on the advanced production of titanium powders, alloys, and finished products using cutting-edge technology.
- **Products/Services:** 5 thousand tonnes per year of high added value titanium metal powders, alloys and finished parts, demanded by pivotal sectors such as Aerospace & Defense, Medical and Automotive.
- **Technological Parameters Of The Project:** Velta R&D invented Velta TI Process, a technology which revolutionises titanium production and replaces conventional "Kroll Process" with remarkably efficient, lower-carbon emission, low-cost metal powder production. This technology underlies the Project.
- **Project Strengths:** Fully integrated titanium production-from ore to final product - maximises value and minimises reliance on strategic imports. Velta's only closed-loop, patented process aligns with EU sustainability goals, being a strategic asset for supply chains security. Rising global demand for titanium powder, alloys and finished parts fuels strong market growth in high-performance sectors assuring swift entering the market.
- **Target Market:** Powders, alloys and finished products markets in EU and US, including additive manufacturing technologies.

Projects highlights[1], $ mln

Financing structure: **CAPEX 100%**

Type of financing: **convertible debt, equity Series A-B**

Project Status: The Project is at the Pre-Feasibility stage. Velta patented unique Velta Ti Process, underlying the manufacturing process. Base on the technology assessment and commercial test-runs well-known EU Institutes confirmed titanium powder's suitability for a range of additive manufacturing applications.

Expected Financial Indicators

NPV **$985.0 mln**

EBITDA (3rd year) **$345.0 mln**

Project launch period **2 years**

Revenue (3rd year) **$715.0 mln**

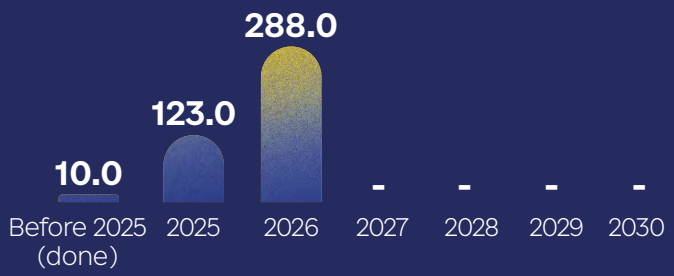

IRR **47%**

DPP **7.1 years**

BUSINESS MODEL

- Producing titanium powders, unique customised alloys and finished products highly demanded in Defense, Airspace,
- Healthcare and other critical sectors.
- Processing is based on the principles of circular economy, substantially reduced CO2 emissions and improved production ratios comparing to conventional methods.

INVESTMENTS IN THE PROJECT, $ MLN

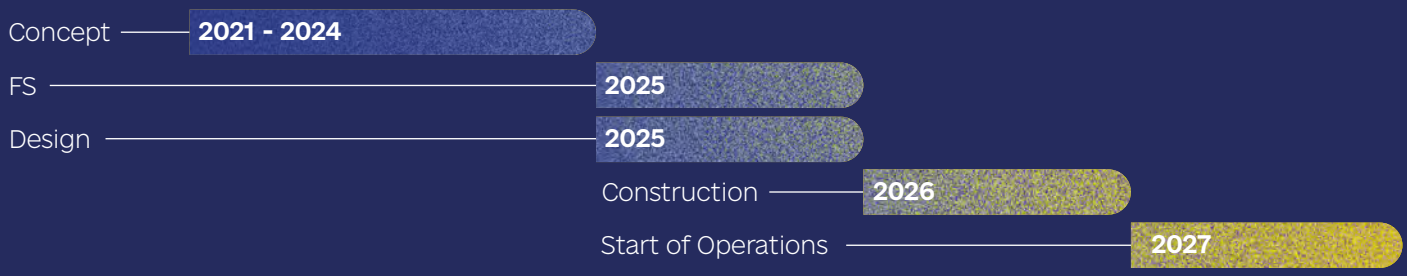

KEY PARTNERS

We take the lead role in Horizon Europe REPTiS project and hold the proprietary technology for metal powders and customised alloys production along with partners: Montan Universitat Lioben, IRES, Tecnalia, Hereon, Fraunhofer, University West, Element22, AlfaMIMtech, IAMG, GKN Aerospace. We successfully collaborated with Ukrainian Institute of Titanium, Polymim, SmarTech, Hatch. Velta Medical utilises titanium powders for production of customised titanium implants with 3D printing technology and more than 300 charity-based implants provided for Ukrainian injured soldiers.

INCENTIVES

- The project will be located in Velta Industrial park in Ukraine, Kirovogradskyi region.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

KIROVOHRAD REGION

CRITICAL MATERIALS, MINING AND PROCESSING

UKRLITHIUMMINING LLC

Polokhivske Lithium Project

- **Brief Description:** UKRLITHIUMMINING LLC (ULM) is the developer and owner of production license for the Polokhivske Lithium Project.
- **Products/Services:** The project will produce petalite concentrate, which is used for producing final lithium products (carbonate or hydroxide) for manufacturing of lithium-ion batteries.
- **Technological Parameters Of The Project:** The process flowsheet used to produce >3% petalite was developed by Metso Outotec via comprehensive flotation kinetic tests along with a locked cycle test (LCT).
- **Project Strengths:** Large resource base, lower cash costs compared to peers, favorable location to be able to integrate into critical materials' value chain in EU.
- **Target Market:** Lithium refineries in EU is the primary target due to geographical proximity.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 90%
OPEX 10%

Type of financing:
debt/equity

Project Status: Pre-Feasibility Study completed in 2024, Definitive Feasibility Study preparation is in progress. Land is owned. Local Environmental Impact Assessment for mining is completed, international Environmental and Social Impact Assessment is in progress.

- **Expected Financial Indicators**

NPV **$828.0 mln**	EBITDA* **$260.0 mln**	Project launch period **3 years**
Revenue* **$400.0 mln**	IRR **50%**	DPP **6 years**

BUSINESS MODEL

- The company aims to become a significant supplier of lithium concentrate to the European lithium refineries.

KEY PARTNERS

The company has engaged the world leading consultants for the project development – such as AMC Consultants, Anzaplan Dorfner, Mesto Outotec, Wood plc. The PFS was completed in 2024. The ESIA is now in progress led by Wardell Armstrong (UK).

INVESTMENTS IN THE PROJECT, $ MLN

* Average over Life of Mine.

NOVOANDRIIVKA, DNIPRO REGION

CRITICAL MATERIALS, MINING AND PROCESSING

DEMURINSKY MINING AND PROCESSING PLANT LLC

Large privatisation

- **Brief Description:** It is one of the leading mining and processing enterprises in Ukraine. Since 2006, the company has been developing the Volchansk complex alluvial titanium and zircon deposit in the Dnipropetrovsk Oblast.
- **Products/Services:** Ilmenite, rutile, zircon.
- **Technological Parameters Of The Project:** Employs open-pit mining and mineral processing technologies, including gravity, magnetic, and electrostatic separation for titanium and zirconium concentrates.
- **Project Strengths:** Access to rich titanium and zirconium ore deposits with advanced mineral processing technology; strategic asset in Ukraine's critical minerals sector with high export potential.
- **Target Market:** Global metallurgical and chemical industries sourcing titanium and zirconium concentrates for manufacturing.

Project Status: Being prepared.

- **Projects highlights[1], $ mln***

	2021	2024
Assets	19.4	19.8
Equity	0	0
Total income	17.4	5.4
Total costs	12	8
Net profit (loss)	3	-2.8

* According to the average annual exchange rate of the NBU in 2021 and 2024, respectively

- **Number of employees (as of 31.12.2024):** 278

Information on assets included in the privatisation object:

Property information (real estate): total area of buildings and structures – 6,500 m².

Information about land plots: total land area - 3,145 hectares (special mining permit – 2,827 hectares).

Raw material reserves: 5 million tonnes with a cut-off content of heavy minerals of 9%.

Vehicle information: motor vehicles, technical equipment, furniture and inventory.

List of assets (movable property) that are recorded on the balance: n/a.

The main conditions for the privatisation of the company:

- Since the stake is subject to large-scale privatisation, its starting price and sale conditions must be approved by the Cabinet of Ministers of Ukraine.
- Currently, the State Property Fund must prepare and submit a coordinated draft of the respective decision for the Government's consideration.

[1] Information about the financial condition of the enterprise, the composition of the privatisation object and the terms of privatisation in accordance with the official teasers of the State Property Fund of Ukraine and other public information.

ZHYTOMYR REGION

UKRAINIAN GEOLOGICAL SURVEY

Yuriivsko-Koziivskyi Ilmenite Ore Deposit

- **Brief Description:** The Yuriivsko-Koziivskyi placer lies within the Volyn Block. Mesozoic-Cenozoic formations are represented by deposits of the Buchach series (Middle Jurassic), Kyiv and Obukhiv suites (Paleogene), the Novopetrivske suite, and the variegated clay layer of the Neogene, as well as the Quaternary system. The Novopetrivske suite deposits form the main productive and promising layer for identifying industrial concentrations of titanium and zircon. The thickness of the sand layer varies from 0.5 m (well 1298) to 16.5 m (well 1312). The absolute elevations of the roof range from 189.1 m (well 1294) in the south to 153.4 m (well 1298) in the northeast.
- **Mineral Resources**: Titanium ores, zirconium ores.
- **Type and term of subsoil use:** Geological exploration, including pilot industrial development of minerals, ed by extraction, for a period of up to 20 years.

- **Projects highlights, $ mln**

Estimated budget: 200.0

Reserves and Resources:

	Reserves (B+C1), Mt	Resources (P1+P3), Mt
Conditional ilmenite	Limited access	Limited access

Land plot area – 23,500 m2

The average content:

Conditional ilmenite (P1): 163.02 kg/m³

Conditional ilmenite (P3): 65.53 kg/m³

GEOLOGICAL INFORMATION

Lithologically, the Novopetrivske suite deposits consist of quartz sands that are light gray, fine to very fine-grained, occasionally with coarse-grained layers, and predominantly horizontally stratified. The average sand thickness is about 6.5 m. In the upper part of the section, lenses of gray and variegated fine-grained sandstones on kaolinitic cement (wells 5326, 5327) are present. Occasionally, interlayers of cross-bedded sands, secondary kaolin lenses, and gray plastic clays with thicknesses of 0.5–5.4 m occur. The sand in the upper section is medium to fine-grained, transitioning predominantly to fine-grained below.

The sands of the Novopetrivske suite are characterised by an elevated content of heavy minerals, especially titanium and zircon, which in some areas form placers. The mineral composition includes quartz (86–100%) and feldspar in the light fraction, while the heavy fraction contains zircon, rutile, garnet, ilmenite, leucoxene, sphene, sillimanite, kyanite, staurolite, tourmaline, and hydrogoethite. The combined content of titanium and zirconium minerals (bulk concentrate) ranges from fractions of a kilogram to 108 kg/m^3 (well 1270), with isolated cases exceeding 200 kg/m^3 (well 9783).

LOCATION

Zhytomyr district of Zhytomyr Region, 6.3 km northeast of the city of Korostyshiv.

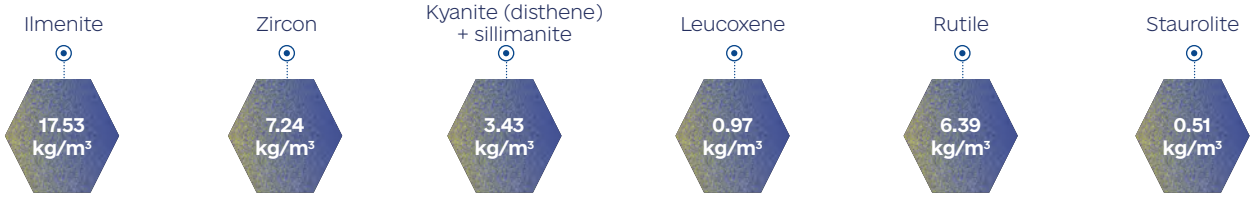

KYIV REGION

UKRAINIAN GEOLOGICAL SURVEY

Tarasivske Ilmenite and Zircon Ore Deposit

- **Brief Description:** The Tarasivske deposit is located within the Rosynsko-Tykytcya megablock of the Ukrainian Shield. The region is characterised by a three-layered structure. The crystalline basement consists of metamorphic, ultrametamorphic, and magmatic structurally-compositional complexes of Archean and Proterozoic age. In the paleodynes, sedimentary rocks of the Cretaceous system are localised. The upper layer is composed of Cenozoic deposits, which cover the older formations throughout the region, forming a cap up to 40-55 meters thick.
- **Mineral Resources**: Titanium ores, Zirconium ores, Kyanite (distene) + sillimanite, Staurolite, Associated minerals - Vanadium ores, Scandium ores.
- **Type and term of subsoil use:** Mining, 20 years.

The average content:

- **Projects highlights, $ mln**

Estimated budget: 200.0

Reserves and Resources:

	Reserves (B+C1), Mt	Resources (C2+P1), Mt
Titanium ores	Limited access	Limited access
Zirconium ores	Limited access	Limited access
Kyanite (distene) + sillimanite	369.1	-
Staurolite	55.0	-
Vanadium ores	5.4	-

LAND PLOT AREA – 1,019 HECTARES

GEOLOGICAL INFORMATION

On crystalline rocks, a weathering crust is developed almost everywhere, mainly of a kaolinitic composition and predominantly of the planar type. A characteristic feature of the area is the lowering of the crystalline basement's hypsometric level in the northeastern direction, toward the Dnieper-Donets basin.

The ore-bearing deposits of the deposit are represented by placer ores, which are associated with the rocks of the sedimentary cap. Its sequence from bottom to top includes Paleogene deposits (Buchach, Kyiv, Obukhiv horizons), Neogene (Novopetrivsk suite, layer of variegated clays, layer of red-brown clays), and Quaternary deposits. The Novopetrivsk suite is widespread and is the main productive layer of the Tarasivske deposit.

Within the deposits, three horizons are distinguished, differing in lithological, granulometric, and structural-textural features, and they are well-mapped based on core samples: lower, middle, and upper. The main carrier of industrial concentrations of titanium-zirconium and other heavy minerals is the middle horizon, which is widespread throughout the deposit and absent only in areas of erosion (Quaternary period).

LOCATION

Bila Tserkva district of Kyiv region near the southern outskirts of the village of Fastivka.

KIROVOHRAD REGION

UKRAINIAN GEOLOGICAL SURVEY

Lypovenkivske Polymetallic Ore Deposit

- **Brief Description:** The field comprises two blocks – Zakhidna and Shkilna. The Zakhidna Block is situated 600 metres west of the village of Lypovenke. The Shkilna Block lies on the right bank of the Mokra Dereniukha River, within the south-western slopes of the central part of the Ukrainian Crystalline Massif. The chromite ores of the Lypovenke field, located in the Zakhidna Block, are to the west of the village, where amphibolite and biotite gneiss formations converge. In the Zakhidna Block, the chromite ores are found in three deposits, consisting of massive (dense) and densely impregnated ore types.
- **Mineral Resources**: Ores of nickel, cobalt, chromium.
- **Type and term of subsoil use:** Mining, 20 years.

- **Projects highlights, $ mln**

Estimated budget: 150.0

Reserves and Resources:

	Reserves (B+C1), Kt	Resources (C2+P1), Kt
Nickel	Limited access	Limited access
Cobalt	Limited access	Limited access

Land plot area – 42.3 hectares

The average content:

Nickel 0.86-1.09%

Cobalt 0.044-0.064%

GEOLOGICAL INFORMATION

Deposits have a lenticular shape. Chromite ores of Shkilna block are represented by a number of small lenticular deposits. Thickness of orebodies of polymetallic ores is up to 15 m and length is 60m –80 m. Ores are massive, dense and sparsely interspersed. Contacts are often clear, sharp, straight or tortuous, contact changes are not observed. Massive (dense) ores with an average chromium oxide content of 36 - 43% do not require enrichment. Dense ores with an average content of useful components from 22.7% to 31.1% need enrichment.

Exploration showed that the best indicators can be obtained by gravity. Thus, from the source ore with a content of chromium oxide 36.5% (dense ores) and 23.6% (interspersed) when grinding up to 0.16 mm, concentrates with an oxide content of 46.5% and 42%, respectively were obtained, the extraction is 83.9% and 73.8%. Large portion of chromium ores is associated with residuum of ultrabasic rocks and contains nickel and cobalt in industrial concentrations. The development of cobalt + nickel ores is provided in the way of surface mining. This method will allow together with cobalt + nickel ores to extract a significant part of chromite ores which are represented by a loose variet.

LOCATION

Holovanivskyi district of Kirovohrad region, near the western outskirts of Lypovenke village.

KHMELNYTSKYI REGION

UKRAINIAN GEOLOGICAL SURVEY

Burtynske Graphite Ore Deposit, Maydanska Area

- **Brief Description:** The Maydanska area of the Burtynske graphite ore deposit is located in the northern wing of the Burtynske anticline, in the southwestern part of the Volyn Block of the Ukrainian Shield. The geological structure of the deposit clearly distinguishes two levels:

  - The lower level, represented by lower Proterozoic deeply metamorphosed rocks of the Teteriv series and magmatic formations of the Zhytomyr complex;

  - The upper level, composed of horizontally lying Cenozoic deposits.

- **Mineral Resources**: Graphite.
- **Type and term of subsoil use:** 20-years licenses for exploration, pilot development and production.
- **Area History:** In 1988, prospecting and evaluation work was conducted within the Burtynske graphite-bearing field, resulting in the estimation of reserves (resources) in categories C2+P1.

- **Projects highlights, $ mln**

Estimated budget: 300.0

Reserves and Resources:

	Reserves (B+C1), Mt	Resources (C2+P1), Mt
Graphite ores	Limited access	68.5
Graphite	Limited access	3.0

Land plot area – 310.4 hectares

The average content:

Graphite – 5.12 - 5.96%

GEOLOGICAL INFORMATION

Three ore bodies have been distinguished, with thicknesses ranging from 45 meters to 55 meters of loose and semi-loose ores, which have a lamellar shape but are branched. These ore bodies have been delineated based on analytical data and outlined with a boundary carbon content of 2%. The ore bodies are located compactly, with the distance between them ranging from 40 to 200 meters. The ore bodies vary in terms of geological exploration: for ore bodies 1 and 3 in the western part of the area, reserves are estimated according to category C2, and for ore body 2, prospective resources are classified in category P1.

The useful mineralisation is found only in the loose and semi-loose graphite ores. The loose graphite ores are represented by the weathering crust of graphite-containing rocks, which is widely spread within the area and consists of rocks from the complete and partial kaolinisation zone. The thickness of loose ores ranges from 5 meters to 32.5 meters, with an average of 17.3 meters. A significant increase in thickness is observed in the form of elongated lenses and strips in the middle part of the useful thickness of the area. The average graphite content is 5.12%. The bottom of the loose graphite ores lies between elevations of 194.2 m and 219.3 m.

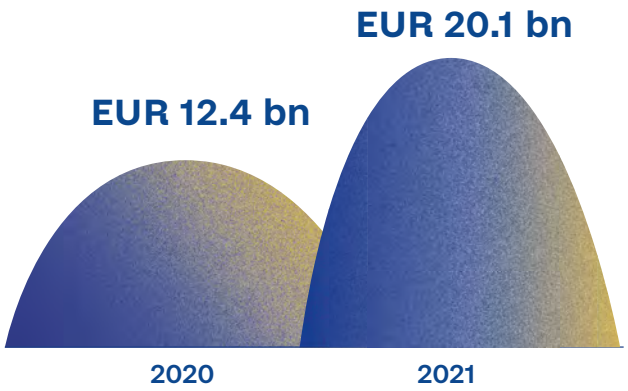

LOCATION

Shepetivka District of Khmelnytskyi Region, on the outskirts of the village of Burtyn.

Project Status: In 2019, the Pravoberizhna Geological Expedition of the Ukrainian Geological Company, under the technical task of TEK INVEST LLC, conducted a preliminary geological-economic evaluation of the Maydanska area of the Burtynske deposit. As a result, graphite ore reserves were approved.

4.6 GREEN STEEL SECTOR

Ferrous metallurgy (including iron ore mining and processing, ironmaking, steelmaking and steel rolling) is a fundamental sector of the economy in Ukraine. In 2020 its aggregate share in GDP accounted for 9.5%, or **EUR 12.4 bn** (including GDP generated by iron and steel companies themselves, supply chain and consumer spending of workers) and employed 530 thousand people in Ukraine. In 2021, it generated **€20.1 bn** in export revenues, accounting for roughly one-**third of Ukraine's total exports. As of 2021, Ukraine was 5th largest exporter of iron ore, 4th largest exporter of iron ore pellets, 3rd largest exporter of pig iron and slabs.**

Ukraine retains a large-scale and regionally diverse metallurgical infrastructure: operational facilities are spread across Dnipro, Zaporizhzhia, Kamianske, Kryvyi Rih, and Horishni Plavni. These sites host vertically integrated production from mining to rolling, and benefit from proximity to both raw materials and transport corridors. Despite the loss of key assets, including Azovstal and Ilyich Steel, Ukraine still controls approximately 90% of iron ore mining assets and around 50% of steelmaking capacity.

Even under wartime conditions, the sector retains a strategic role contributing **7.2% to the GDP** of Ukraine in **2024 (5.7% in 2023)**. The share of the iron & steel industry increased in 2024 due to the growth of **steel output (+21.5%)** and **iron ore output (+55.2%)**.

Companies of the sector continue their investment activities, having invested

USD 650 million

Stable operations within the «sea corridor», which made possible exports from the Black Sea ports of Ukraine, determined the positive dynamics in the iron & steel industry. Sector's share in total export of goods from Ukraine also rose to **15.4%** in 2024. The sector continues to export steel products, iron ore, and semi-finished goods to over **60 countries**, with the European Union as its primary destination (**over 70% of export volumes**).

Ukraine's iron and steel sector is an integral part of the European steel industry, being embedded within EU supply chains, and its future development is closely aligned with European market trends and regulatory conditions. The country's metallurgical sector can play a key role in EU value chain diversification, reducing the bloc's reliance on russian, Chinese or Turkish imports and enhancing strategic autonomy.

The EU is driving an ambitious steel decarbonisation agenda. With a legally binding 55% emissions reduction target by 2030, rapidly rising ETS carbon prices, and the gradual phase-out of free emission allowances (expected to halve by 2030 and disappear entirely by 2034), steel producers across Europe face mounting pressure to decarbonise within the next decade. Building large-scale green steel capacity within Europe faces major obstacles, including a shortage of high-quality iron ore (DR-grade) and limited availability of affordable clean energy. Population density, land use restrictions, and lengthy permitting processes further complicate renewable energy development, making domestic green steel production both costly and uncertain.

As a result, Europe is likely to become a net importer of green iron – particularly in the form of HBI – to meet its decarbonisation targets while retaining steelmaking jobs and industrial know-how. In this context, Ukraine stands out as a credible supplier of green metallics for Europe, thanks to its vast DR-grade iron ore reserves and significant renewable energy potential. Alongside countries such as Brazil, Canada, and Australia, Ukraine is well positioned to become part of Europe's strategic solution for securing low-carbon steel inputs.

As for global trends, demand for low-carbon steel in sectors such as automotive, construction, and energy infrastructure is expected to rise steadily, creating a premium market segment Ukraine can competitively serve.

Donor-backed initiatives such as the Ukraine Facility and EU technical assistance provide a pathway for Ukraine's steel sector to access targeted funding and expertise for decarbonisation, energy efficiency, and technology modernisation, aligned with EU market requirements.

SWOT-ANALYSIS

Strengths

- **Ukraine possesses vast DR-grade iron ore reserves**, uniquely positioning it for large-scale green steel production in Europe
- Producers such as Ferrexpo and Metinvest **already operate DR-pellet capacities** essential for hydrogen-based steelmaking
- **The proximity to the EU** allows offers critical logistical and regulatory advantages for integration into EU low-carbon steel supply chains
- **Experienced and technically skilled workforce**, with decades of accumulated industrial expertise
- **Ongoing investment initiatives** by leading domestic producers are aimed at modernising facilities and aligning operations with EU climate goals
- **Rail and port infrastructure** remains functional for export corridors

Weaknesses

- **The ongoing war** has led to a dramatic contraction of steel production capacity, with a two-thirds decline over the past decade and the loss of major facilities
- **Energy costs** have surged significantly due to the destruction of critical power infrastructure and the country's growing dependence on imported electricity
- Many metallurgical plants continue to rely on **outdated technologies and blast furnace operations**, which are incompatible with EU environmental standards and sustainability targets
- The level of automation, digitalisation, utilisation of capacity and process optimisation remains low across most Ukrainian steel enterprises, reducing operational efficiency and energy performance
- Ukraine remains **dependent on the import of key production inputs** such as coking coal, ferroalloys, and refractories, increasing vulnerability to external market volatility
- **Domestic steel consumption is currently limited** due to macroeconomic instability and infrastructure destruction, reducing incentives for reinvestment in production

Opportunities

- The EU's push for **carbon neutrality and supply chain diversification**, together with the introduction of CBAM, creates a strategic opportunity for Ukraine to decarbonise and become a key supplier of low-carbon steel to Europe
- **Ukraine can substitute russian** steel with its own DRI, HBI, pig iron and semi-finished products shipments to Europe
- **Ukraine's renewable energy potentia**l (solar and wind) supports future hydrogen and EAF-powered steelmaking
- **International cooperation** – leading domestic players, in partnership with international technology providers such as Danieli, are preparing large-scale investments in DRI facilities in Ukraine and EAF-based rolling mills in Italy
- **The post-war rebuild** will generate strong demand for low-carbon steel domestically

Threats

- **Continued military hostilities** expose critical production sites, transport routes, and energy systems to destruction, directly endangering personnel safety and investor confidence
- **Global overcapacity in steel production** exerts downward pressure on international prices and makes green Ukrainian exports less competitive
- The green transition requires **massive capital investments**, which are difficult to secure given Ukraine's sovereign risk profile, high cost of capital, and insurance constraints
- If Ukraine fails to implement **decarbonisation** at scale, CBAM and other EU climate regulations may severely limit access to its largest export market post-2030
- **Competition from steel-producing countries with state subsidies or protected markets** (such as China, India, and Turkey) may outpace Ukraine in global green steel market penetration

BUSINESS MODEL

- The business model of electric arc furnace (EAF) steelmaking is based on the use of domestic iron ore resources, taking into account the strategic plans for DRI and HBI production by Ukrainian mining companies.
- A significant portion of the charge consists of steel scrap, which further reduces production costs and enhances operational flexibility.
- The final output comprises flat steel products intended to substitute imported supply on the domestic market.
- The core economic advantage lies in cost-efficient logistics and access to raw materials.

KEY PARTNERS

Tenova, Danieli, Primetals Technologies, Metso Outotec, Tata Steel Consulting, SMS group.

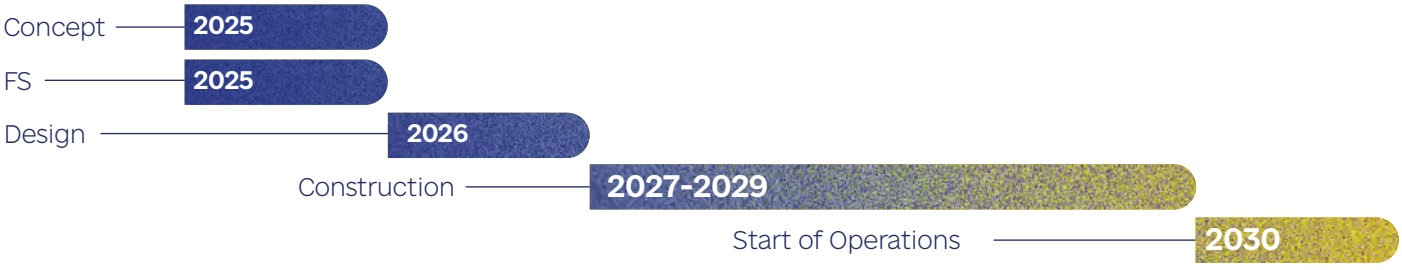

INCENTIVES

The project is located on the territory of an actually operating steel mill with access to electricity and natural gas.

All necessary local permits for steel production are available.

The technology meets European environmental standards.

BUSINESS MODEL

- Improved efficiency of technological processes - the new complex will reduce the volume of slurry pumped to the tailings storage facility during the iron ore beneficiation process.
- This will result in significant conservation of natural resources and a reduction in production costs.

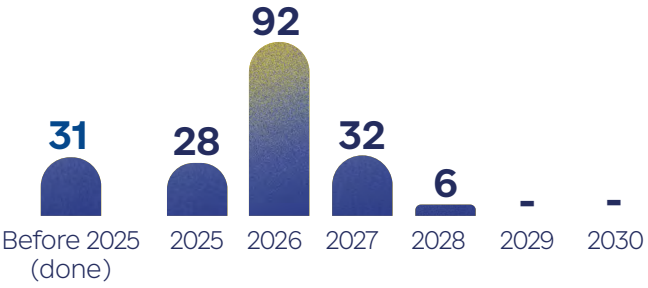

KEY PARTNERS

- Metso Outotec, Habermann Aurum Pumpen GmbH.

INCENTIVES

Located on the territory of an operating mining and processing plant.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1]The project information and financial indicators are provided by company-initiator of the project.

4.7 DEFENCE AND DUAL-USE INDUSTRY

Ukraine's defence technology sector has emerged as one of the most rapidly growing industries in the country. Since the start of full-scale invasion, the demand for technically advanced, asymmetric answers to russian military advantage has risen to an all-time high. While exact figures remain classified due to security concerns, estimations suggest that defence manufacturing makes **about $9 bn in direct economic impact annually**. Meanwhile, the technological subsector is responsible for about $3 bn, raising the share annually. Ukraine's defence sector has focused on technological products, as those could not have been provided by partners, and are also relatively cheaper and faster to produce. The list of **most significant local defensive technologies** consists of: **unmanned aerial vehicles (UAVs)**, **electronic warfare (EW) systems**, and **AI-powered software**.

Ukraine's defence sector is unique, as the country has inherited a gigantic military-industrial complex after the collapse of the Soviet Union's regime. Unfortunately, it was not only non-competitive on the market, as the quality of production was comparatively worse, but the overall demand for new military products was at an all-time low. As a consequence, the industry has been neglected, and the Ukrainian military complex has not produced anything significant in series until 2014. Since then, the situation has changed dramatically, while facing pro-russian aggression, the country could not buy lethal weapons from Western countries as a result of the embargo, therefore, the demand for internal military production has taken off from the bottom. Today, many components of the inherited military complex are being revived at an accelerated pace and reoriented towards high-tech solutions driven by a new generation of engineers, veterans, and tech entrepreneurs.

Unlike any Western partners, Ukrainian defence tech companies benefit from continuous battlefield testing and iteration of their products under always-changing battlefield conditions. Ukrainian startups often customise their products according to direct feedback and requests from frontline units.

In comparison to many NATO high-tech products, Ukrainian startups and R&D units create cost-effective and reliable solutions, which ultimately shape the modern battlefield and can significantly help any Western partner's military be prepared for a real-life battlefield.

Furthermore, Ukraine is developing an exceptionally collaborative ecosystem for defence innovation, combining public needs and willingness with private-sector flexibility. Government programs – such as the establishment of **Brave1, a defence tech cluster**, in 2023 – aim to accelerate and improve the process of military tech development, certification, and procurement. In parallel, private accelerators, hackathons, and foundations are actively supporting defence startups through mentoring, seed funding, and access to battlefield testing. This fast-developing innovation infrastructure, though still in early stages, is already making a huge contribution to Ukraine's defence.

The full-scale invasion has drastically changed the perception of the defence sector among Ukrainians. The industry, which for many years was interesting only for a few enthusiasts, has emerged as a field where multiple companies fight for specialists, new orders, and other aspects of a live, wild field. Nowadays, many young Ukrainians see their future in the defensive tech sector, while experienced specialists are considering switching to the rising field, aligned with patriotic values. It creates a unanimously and diverse pool of talent: software engineers, AI engineers, tech engineers, and others. Many of them have gained unique experience developing products for the frontline, creating a rare blend of theoretical and practical knowledge. The combination of technical capacity and patriotic motivation seen in the Ukrainian defence sector is extremely difficult to replicate elsewhere.

Finally, Ukraine's defence tech sector is providing unique, battlefield-tested, asymmetric solutions to the modern military challenges. With further scaling of production, gaining new experience, and creating brave R&D ideas, the field has a bright future, as **Ukraine's ultimate goal is to become Europe's arsenal**.

SWOT-ANALYSIS

Strengths

- Proven battlefield solutions, **the most adaptable military industry across the globe**
- **Cost-effective**, asymmetric products
- **Rapid growth** of innovative startups
- Loads of fresh, young engineers
- **Government** and voluntary sector **support**
- International support and **cooperation with Western partners**
- **Brave1 defence tech cluster**, which supports startups with funding

Weaknesses

- Critical **lack of financing**
- **Export restrictions** and inability to sell products to other countries
- Ineffective bureaucratic procedures
- Weak protection of intellectual property rights
- **Limited domestic market** for defence products during peacetime

Opportunities

- **Export potential** to countries facing asymmetric threats (e.g., drones, EW, soft)
- **Partnerships with Western defence contractors** and integration into international supply chains
- Commercialisation of wartime innovations into dual-use technologies
- **Huge collaboration opportunities** between different companies
- Access to foreign grants and international programs

Threats

- **Risk of production destruction** as a result of russian deep-strike UAVs or missile attacks, sabotage
- **Risk of technology leakage** via cyberattacks or espionage
- **Huge dependency on China-produced components**
- Potential cuts in defence (both by government and foundations) spending when the active phase of war ends
- **Further economic problems in the country**, an even bigger lack of financing

DEFENCE AND DUAL-USE INDUSTRY

Highlighted investment projects

DEFENCE TECH, COMMUNICATIONS

HIMERA UKRAINE LLC

HIMERA

- **Brief Description:** HIMERA is a Ukrainian developer of communication systems for Defense Forces, providing battlefield-ready solutions for modern warfare.
- **Products/Services:** The project offers advanced communication systems tailored for electronic warfare, addressing the $12 billion global tactical communications market.
- **Technological Parameters Of The Project:** HIMERA products are continuously improved by a multidisciplinary team to meet the evolving demands of military operations.
- **Project Strengths:** Trusted by over 7,000 users in Ukraine's critical operations, HIMERA has been also validated by the US Air Force and Special Operations Forces, showcasing its reliability.
- **Target Market:** The primary market includes defense forces, with early international traction through sales to the US Air Force and collaborations with other defense organisations.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 20% / OPEX 80%**

Type of financing: **equity**

Project Status: HIMERA is currently under implementation, actively expanding its presence in the defense sector. With thousands of users in Ukraine Defense Force, HIMERA has already expanded into NATO-wide market with existing customers in the US, Nordics, and Baltics. HIMERA has built a completely proprietary technological base to support its future expansion.

- **Company indicators**

Sales volume **$0-10 mln**

Experience **1-3 years**

BUSINESS MODEL

- HIMERA's priority is equipping Ukrainian Defense Forces with the full spectrum of communications solutions.
- The next step is to expand internationally through innovation pilots and procurement agreements with global clients.

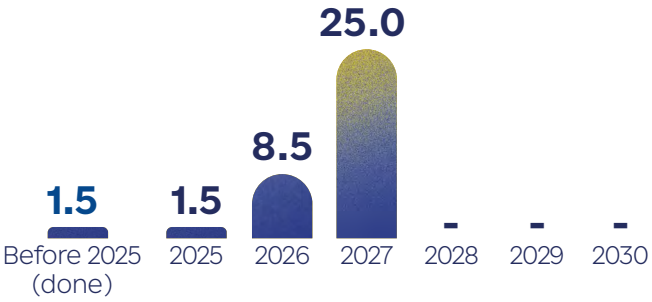

KEY PARTNERS

Existing relationships with a system integrator in a NATO-member state and are now in talks with potential partners in other countries of the Alliance.

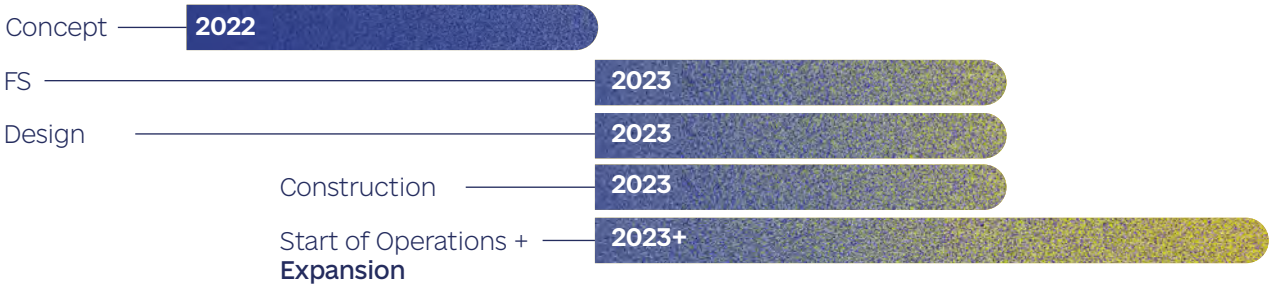

INCENTIVES

The project benefits from equity financing, facilitating capital participation for further development.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

DEFENCE TECH, UAV

CDBS LLC

SHAHED DRONE INTERCEPTOR DEVELOPMENT

- **Brief Description:** Development of counter-drone systems to neutralize Shahed-type threats, with EU-based production to ensure reliability, support Ukrainian defense, and meet growing NATO demand.
- **Products/Services:** Specialized FPV interceptor UAVs with autonomous targeting capabilities, and comprehensive training packages. Solutions include kinetic interceptors and electronic warfare variants for diverse threats.
- **Technological Parameters Of The Project:** Proprietary communication systems enabling swarm coordination, battery technology providing 45+ minute flight time, unique engine for rapid deployment, AI-powered targeting with 95% success rate against Shahed-class targets. Systems are hardened against jamming and cyber interference.
- **Project Strengths:** Combat-proven cost-efficient FPV drone built to intercept evolving Shahed threats using AI targeting, swarm coordination, and EW resilience.
- **Target Market:** Primary: Ukrainian Armed Forces, European NATO members. Secondary: Israel, South Korea, Australia, Japan.

BUSINESS MODEL

- Manufacturing - Ukrainian component suppliers, European production facilities.
- Distribution - NATO procurement channels, direct government-to-government contracts; Ukrainian MOD.
- Financing - In discussion with NATO Innovation Fund for complementary capital support and Venture Capital Funds.
- Supply Chain - Dual-source strategy (Ukraine + Europe) for critical components; over 60% of input materials locally sourced within the Ukraine and EU.

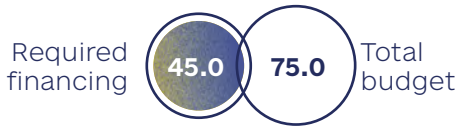

KEY PARTNERS

Technology Partners - Alfred Nobel University (Dnipro, Ukraine).

INCENTIVES

Project is eligible for EU Defense Fund grants, Ukrainian government export support programs, and NATO Innovation Fund consideration.

DEFENCE TECH, UAV

FRDM GROUP

Strike drone R-34 + laser guided munition

- **Brief Description:** Unmanned Aerial Vehicle (UAV) bombers are vulnerable to small arms and EW, limiting daytime operations. Free-fall munitions lack accuracy at higher altitudes. This reduces strike efficiency and increases UAV losses. A guided weapon system is proposed to address these issues. It includes guided munitions and onboard UAV targeting equipment.
- **Products/Services:** Drone + Guided munition.
- **Technological Parameters Of The Project:** Laser guidance.
- **Project Strengths:** Laser-guided munitions offer unparalleled accuracy, allowing for pinpoint strikes on targets. This drastically minimizes the risk of collateral damage to surrounding infrastructure and non-combatants, a critical concern in modern conflict and civilian applications alike.
- **Target Market:** Military.

DEFENCE TECH, UAV

AUTONOMOUS ROBOTIC SYSTEMS LLC

Swarmer

- **Brief Description:** Swarmer develops AI-driven software that transforms drones into autonomous, collaborative assets, enabling a single operator to manage multiple drones efficiently.
- **Products/Services:** STYX: A swarm management system for autonomous drone missions. TridentOS: A secure operating system for unmanned vehicles, ensuring reliable communications.
- **Technological Parameters Of The Project:** Swarmer uses vendor-agnostic AI software solutions for real-time adaptability and collabs in military and civilian applications.
- **Project Strengths:** Totally hardware-agnostic — integration possible with any unmanned vehicle manufacturer. The technology, with military-grade reliability and versatility, minimises human involvement in high-risk environments.
- **Target Market:** Primary customers include drone vendors in military, emergency response, and agriculture sectors.

Projects highlights[1], $ mln

Financing structure:
CAPEX 20%
OPEX 80%

Type of financing:
equity, project finance

NPV	IRR	DPP
$11.5 mln	**35-45%**	**3-4 years**

Project Status: Swarmer is currently under implementation, with a projected increase in drone licenses from 30,000 in 2024 to over 350,000 by 2026, indicating strong growth potential. It has been battlefield-proven since august 2023, being involved in 320 combat missions per day.

Company indicators

Sales volume	Experience
$10-50 mln	**1-3 years**

BUSINESS MODEL

- The company enables mass deployment of interoperable drones via manufacturers (B2B2G) and direct government sales (B2G).
- Revenue comes from royalties, fees, and custom integrations for manufacturers; government deals are hardware + software bundles.
- Example deal (2025): $45,000 for 10 fully autonomous, swarm-capable drones.

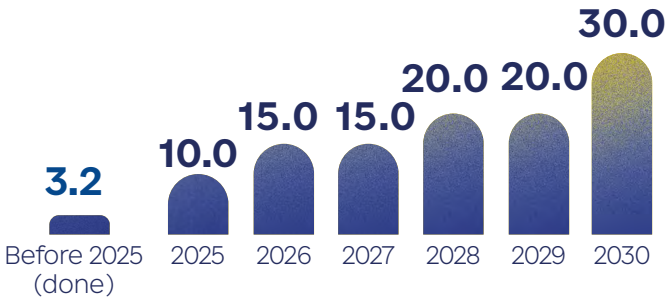

KEY PARTNERS

Neros, Airlogix, ORQA, Drone Space, U-Force, Vector, Regulus Global, DefSecIntel, Auterion, Waterfall Industries.

DEFENCE BUILDER

Startup Accelerator

- **Brief Description:** Acceleration programme for Ukrainian defence tech startups, providing resources and expertise they need to fundraise & scale mission-critical innovations.
- **Products/Services:** Educational and venture acceleration programme combining business and military expertise to validate, fund, and launch technologies from lab to battlefield.
- **Technological Parameters Of The Project:** Startups work on UAVs, AI, cyber, EW, ISR, autonomous platforms, etc. The programme runs 2 cohorts/year, with 16 alumni as of today, scaling to 40 startups annually and 200 by 2030.
- **Project Strengths:** Deep integration with both military & venture ecosystems. Direct combat-validation, active NATO interoperability advisory and track record of rapid scale-up.
- **Target Market:** Ukrainian defense and security agencies, NATO/EU military buyers, and international dual-use integrators.

BUSINESS MODEL

- Venture-style model taking minority equity stakes in accelerated startups.
- Investors gain exposure to a de-risked portfolio and realise returns through equity growth and partial exits during follow-on rounds or acquisitions.
- Exit paths include early buyouts, mid-term defense mergers and acquisitions (M&A), and long-term scale-up wins.

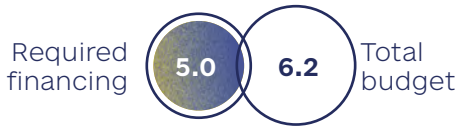

KEY PARTNERS

The Ministry of Defence, Victory Drones, Brave1, Swedish Defence University, Aerorozvidka.

INCENTIVES

Eligible for national security and tech innovation grants; potential co-financing from EU/NATO programmes; strategic fit for international dual-use policies.

4.8 INDUSTRIAL MANUFACTURING

Industrial manufacturing is a cornerstone of Ukraine's economic resilience and transformation. It plays a critical role in strengthening the domestic value chain, generating high-value exports, and supporting sectors vital to recovery, including construction, agriculture, and defense. A strong manufacturing base boosts productivity, creates skilled jobs, and reduces Ukraine's reliance on raw material exports by promoting the production of higher-margin, processed goods. As Ukraine reorients its economy toward EU standards and global value chains, industrial manufacturing is positioned to become a key driver of sustainable growth, innovation, and economic diversification.

In 2021, the total output of Ukraine's manufacturing sector amounted to

nearly $96 bn

accounting for 56% of the country's overall industrial production. Key subsectors included:

- Food and tobacco - $30.9 bn[25];
- Metallurgy - $29.3 bn[26];
- Industrial manufacturing sector - $35.7 bn.

Russia's full-scale invasion of Ukraine caused extensive and immediate disruption to the country's industrial manufacturing base. One year into the war, the impact was stark: in 2022, total manufacturing output contracted by 41.0% (by $38.8 bn).

This sharp decline was driven not only by direct military damage, but also by critical disruptions to supply chains, severe energy shortages, loss of export markets, and a collapse in domestic demand. Specifically, the Industrial manufacturing sector alone declined by 37% (-$12.5 bn), with heavy machinery and chemical production hit hardest-particularly in regions near the frontlines.

The largest sectors within industrial manufacturing in 2021 included:

$9.9 bn
Plastic and rubber products

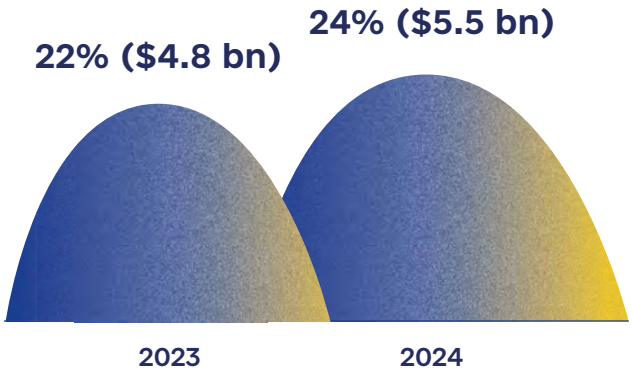

$9.0 bn
Wood processing and paper production

$8.9 bn
Machinery and equipment

$4.5 bn
Chemical products

$1.6 bn
Textile manufacturing

In 2023 and 2024, the industrial manufacturing sector experienced a strong rebound, driven by improving business conditions, relocation of enterprises, the opening of new production facilities, and heightened demand for manufactured goods-particularly from the defence sector: In 2023, industrial output grew by 22% (by $4.8 bn); In 2024, the growth rate reached 24% (by $5.5 bn).

A key driver of this growth was the surge in demand for machinery, textiles, and other processed goods required by Ukraine's defence and recovery-related industries. The machinery and equipment sector demonstrated the highest recovery rate, reaching $13.8 bn in output by 2024. **In 2024, the manufacturing sector recovered to approximately 93% of its pre-war output**.

Recognising the sector's strategic importance, the Ukrainian government has launched a wide-ranging industrial support agenda aimed at stabilising and revitalising production both during the war and in the post-war recovery period. The policy framework focuses on:

- Strengthening export capacity;
- Promoting technological modernisation;
- Increasing local content in industrial output.

Ukraine's industrial sector is undergoing a profound transformation driven by the war, the loss of markets, the relocation of production facilities, and adaptation to new economic conditions. Future growth potential lies in the modernisation of manufacturing, integration into European value chains, the development of industrial parks and clusters, financial support mechanisms, and digital transformation.

[25] - The food industry figures are presented in the Agrifood processing section
[26] - The metallurgy industry figures are presented in the Green steel section

The expansion of the manufacturing sector helps to reduce reliance on logistical bottlenecks and lowers the share of logistics costs in the final product price by shifting towards higher-margin goods with lower weight and volume. This enhances the export potential and international competitiveness of Ukrainian products while also reducing the share of raw materials in the country's export structure.

SWOT-ANALYSIS

Strengths

- **Cost structure and strategic location**. Labour and energy costs are significantly lower than in Western Europe, providing a strong competitive edge for both domestic production and export-oriented manufacturing
- **Skilled workforce and adaptable educational infrastructure**. With targeted investment and reform, the extensive network of technical and vocational schools could rapidly transition into a modern, industry-aligned education system
- **Proximity to raw materials**. Ukraine also possesses significant reserves of iron ore and other metals, with most machine-building enterprises located near these resources – reducing input costs and logistics complexity
- **Established industrial base and export potential**. Ukraine hosts thousands of manufacturing enterprises. The textile industry alone comprises over 2,500 plants, with 80–90% of output exported

Weaknesses

- **War-related infrastructure and capacity losses**. Around 15% of Ukraine's manufacturing capacity has been damaged or destroyed due to the war
- **Supply chain dependencies and import vulnerabilities**. Ukrainian manufacturers face critical dependencies on imported materials, particularly in sectors where domestic production has ceased
- **Technological gaps and modernisation needs**. Much of the sector's equipment is outdated, with an urgent need for re-equipment and modernisation to meet EU and global standards
- **Workforce shortages and skills migration**. The ongoing war has exacerbated workforce shortages in the manufacturing sector
- **Financial constraints** and access to capital. Enterprises face high borrowing costs and limited access to long-term financing, which hampers investment in modernisation and export expansion

Opportunities

- **Massive reconstruction needs** (infrastructure, energy, transport) will drive demand for machinery – from construction equipment to railway and energy machinery
- **EU Integration and Investment Frameworks**. Ukraine's EU candidate status, granted in June 2022, opens pathways for deeper economic integration and regulatory alignment
- **Export Diversification and Renewable Energy Manufacturing**. The sector is actively reorienting from CIS markets to the EU, Middle East and Asia, capitalising on Ukraine's logistics infrastructure and trade agreements.
- **Industrial Parks**. Ukraine is actively promoting the development of industrial parks, with substantial government incentives for foreign investors
- **Adoption of Industry 4.0 and High-Tech Manufacturing**. The rise of industrial automation, robotics and digital manufacturing (Industry 4.0) is supported by national initiatives and industry associations

Threats

- **Ongoing security risks and war-related disruptions**. Security concerns remain the most significant deterrent to investment and production. War risk insurance is available but remains limited and costly
- **Energy security and infrastructure vulnerabilities**. The manufacturing sector's dependency on a stable energy supply creates operational risks amid ongoing attacks on energy infrastructure
- **Regional competition and investment alternatives**. Ukrainian machinery faces strong competition from European, Chinese and American manufacturers, both domestically and in export markets
- **Regulatory and certification barriers**. Access to the EU market is hampered by the lack of local certification laboratories accredited to EU standards and the high cost of certification
- **Supply chain vulnerabilities**. Disruption of domestic supply chains and dependence on imported advanced materials and components expose the sector to global supply shocks and price volatility

INDUSTRIAL MANUFACTURING, TUBE PRODUCTION

DNIPRO REGION

OSCAR PRODUCTION GROUP

Modernisation of seamless tubes production

- **Brief Description:** Purchase of a new press line and a bright annealing furnace, along with equipment modernisation and the establishment of a flow production line.
- **Products/Services:** Seamless titanium and nickel alloys tubes, seamless stainless steel tubes.
- **Technological Parameters Of The Project:** OSCAR specialises in the production of precision tubes through cold deformation for critical applications, where high performance, tight tolerances, and exceptional material integrity are essential. The company's expertise ensures reliable solutions for industries with the most stringent technical and safety requirements.
- **Project Strengths:** The enterprise possesses advanced equipment for manufacturing both general-purpose and specialised pipes.
- **Target Market:** The project is intended for export to external markets and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 85% / OPEX 15%**

Type of financing: **debt financing**

Project Status: The conceptualisation phase of the project has been completed.

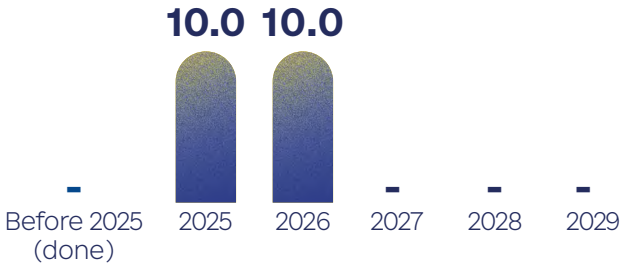

- **Expected Financial Indicators**

NPV **$16.0 mln**	EBITDA (2030) **$6.6 mln**	Project launch period **3 years**
Revenue (2030) **$24.0 mln**	IRR **20.2%**	DPP **6 years**

BUSINESS MODEL

- Producing and selling high-tech seamless tubes from titanium, nickel alloys, and stainless steel.
- The process begins with purchasing raw material billets, which are then extruded via hot pressing, followed by cold deformation on rolling mills for precise sizing.
- We provide high-quality, specialised products to demanding industries, including oil/gas, aerospace, nuclear, automotive, chemical, medical, and tooling, primarily serving markets in Europe, the USA, and Ukraine.
- Strong supplier relationships and continuous R&D ensure our advanced manufacturing capabilities.

OCTG Tube and pipes

- **Brief Description:** Enter the premium Oil Country Tubular Goods (OCTG) segment by developing and supplying seamless stainless-steel tubes and pipes compliant with 25 CRA (Corrosion Resistant Alloy) standards, specifically targeting the rapidly growing Carbon Capture and Storage (CCS) infrastructure market in US and Europe.
- **Products/Services:** New equipment will produce Tubes, Coupling stocks and Casing for the CO2 or Oil wells according to the standard API 5 CRA. Diameter range from 60 mm to 240 mm, lenght 11-13 meters, wall thickness wide range.
- **Technological Parameters Of The Project:** Main parameter is the mechanical yield to be in the range of 80-125 KSI, plus all parameter according to API 25 CRA standard.
- **Project Strengths:** The project suppports the decarbonisation effort (via storage) of excessive CO2 and has good financials.
- **Target Market:** Carbon Capture application in US and Europe, Oil and Gas in the US, Europe, Middle East.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 90% / OPEX 10%**

Type of financing: **debt**

Project Status: The project is ready for implementation. The scope definition is complete, the preliminary tender process for budgeting was completed. The installation is planned at the existing premises of Centravis in Nikopol in the Hot shop workshop. The API 5 CRA licensing expected by end 2025.

INDUSTRIAL MANUFACTURING, INDUSTRIAL PARK

LVIV REGION

FORMACIA SYHNIVKA LLC

Industrial park FORMATSIA.LVIV

- **Brief Description:** Industrial Park Formatsia.Lviv is a modern project aimed at fostering manufacturing enterprises and innovation in Ukraine.
- **Products/Services:** The park offers production spaces from 200 m^2 to 20,000 m^2 for sale, lease, or turnkey construction based on client needs.
- **Technological Parameters Of The Project:** A key feature of Formatsia. Lviv is its "quadruple helix" model, uniting industry, government, community, and education to drive innovation within a full-scale ecosystem for modern production and export-focused enterprises.
- **Project Strengths:** The park offers 150,000 m^2 of industrial space with a central hub, promoting collaboration, international expansion, and regional industrial transformation.
- **Target Market:** The park's target audience is Ukrainian residents, for whom favorable conditions are created to develop innovative businesses and expand into international markets.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt financing**

Project Status: Stands at the implementation stage. The overall readiness of the park currently stands at 50%. The first phase is scheduled to be commissioned in 2025.

- **Expected Financial Indicators**

NPV **$34.0 mln**

EBITDA (5th year) **$6.7 mln**

Project launch period **3 years**

Revenue (5th year) **$7.7 mln**

IRR **13.5%**

DPP **9 years**

BUSINESS MODEL

- The park provides residents with R&D and prototyping facilities, business support infrastructure, and turnkey project delivery.
- It also ensures employee comfort with amenities like dining, healthcare, retail, and sports spaces.

KEY PARTNERS

The initiator of the park's creation is the Lviv City Council, while the developer and managing company is Alterra Group. The Ministry of Economy of Ukraine has provided over €2.5 million in state support for the development of the park's infrastructure.

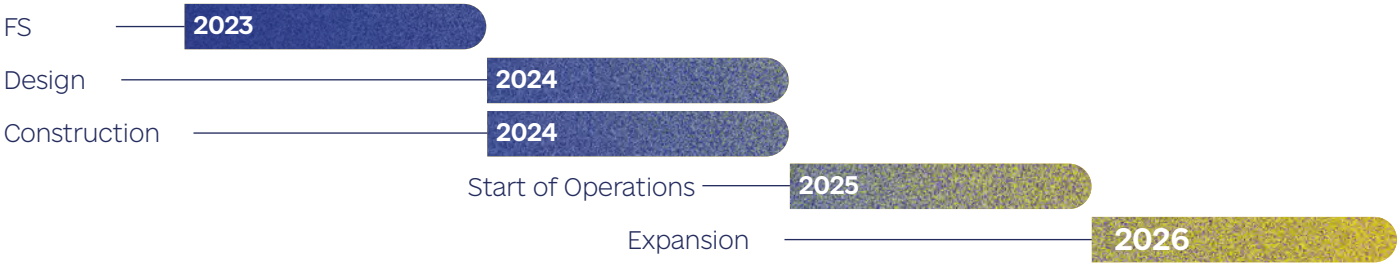

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

Residents of the park may benefit from government tax incentives, such as exemption from VAT on imported equipment, exemption from import duties, and a 10-year corporate income tax exemption.

TATRA-YUG LLC

New plant construction for the production of electric public transport rolling stock

- **Brief Description:** The project involves the construction of a factory for the production of electric public transport rolling stock, which might contribute to Ukraine's green transition.
- **Products/Services:** The main products are trams, other rolling stock for light rail transit (LRT) systems, urban and suburban railway transport, and electric buses.
- **Technological Parameters Of The Project:** The plant's capacity should be 100 vehicles per year. The project includes a 30,000 m² facility with 10 portal cranes (10–20 tonnes), painting and shot-blasting chambers, and upgraded metalworking and welding equipment.
- **Project Strengths:** This project will support the development of electric-powered public transport systems in Ukraine, aligning with the country's goals in cooperation with the EU.
- **Target Market:** Product localisation will range from 60% to 95%, depending on customer requirements.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt, project financing**

Project Status: Stands at the concept stage.

- **Expected Financial Indicators**

NPV **$142.0 mln**

EBITDA (5th year) **$26.0 mln**

Project launch period **2 years**

Revenue (5th year) **$109.0 mln**

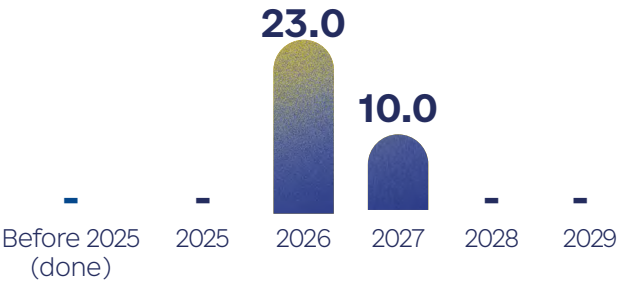

IRR **42%**

DPP **4 years**

BUSINESS MODEL

- The project involves the construction of a plant in Dnipro for the production of electric vehicles, such as trams and electric buses, with a capacity of 100 units per year.
- The plant will be equipped with modern machinery and energy-efficient systems, aligning with sustainable development goals and reducing emissions in the transport sector.

INVESTMENTS IN THE PROJECT, $ MLN

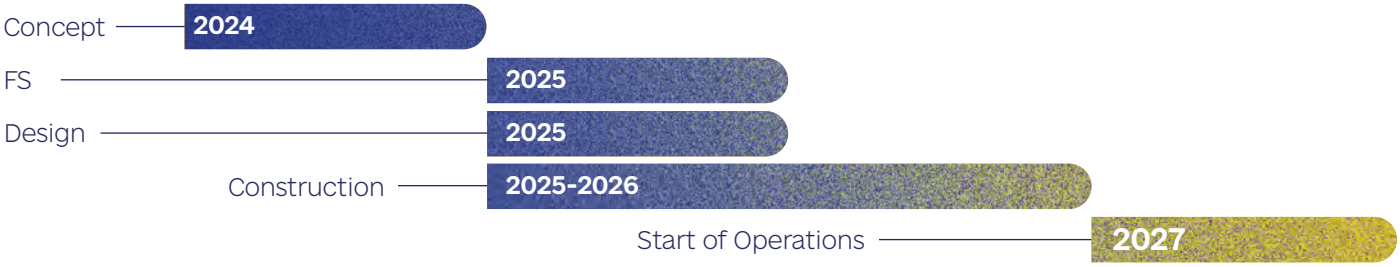

KEY PARTNERS

The main partners are municipal enterprises, as Odesamiskelektrotrans, Kyivpastrans, as well as companies with which supply contracts have been signed, incl. foreign ones, e.g in Egypt.

INCENTIVES

A site for locating the production facility in the city of Dnipro is currently under consideration, potentially within the territory of an industrial park.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

INDUSTRIAL MANUFACTURING, AUTOMOTIVE & PUBLIC TRANSPORT

SOLOMONOVO, ZAKARPATTIA REGION

EUROCAR PrJSC

Passenger car and pickup manufacturing at the Eurocar plant

- **Brief Description:** Full-scale car manufacturing in cooperation with global automotive concerns for export to external markets and supply to the Ukrainian market.
- **Products/Services:** Passenger car (including Battery Electric Vehicle, Extended-Range Electric Vehicle, Plug-in Hybrid Electric Vehicle) and pickup.
- **Technological Parameters Of The Project:** The project is intended to accelerate high value-added production in Ukraine, with a strong focus on electric vehicles and the development of local industrial capacity for transport solutions.
- **Project Strengths:** Location in close proximity to the Ukrainian border with Hungary and Slovakia, which ensures effective components sourcing; availability of production capacities combined with 20+ years of experience in Volkswagen Group brand cars manufacturing; location near the Solomonovo industrial park – high-tech site of 66.2 hectares for production and development of logistics hub, enabling the expansion of assembly and production capacities.
- **Target Market:** Ukraine, EU/EMEA and beyond.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 41% / OPEX 59%

Type of financing:
debt financing (IFIs, commercial banks) / equity financing (capital participation)

Project Status: The conceptualisation phase of the project has been completed.

INDUSTRIAL MANUFACTURING, AUTOMOTIVE & PUBLIC TRANSPORT

MEGOELECTRIC UA LLC

Lightweight electric trucks production

- **Brief Description:** Manufacturing light electric trucks from scratch. Each vehicle weighs 450 kg and can transport up to 1 tonne of cargo for up to 400 km.
- **Products/Services:** Light Electric Trucks and Light Commercial Vehicle.
- **Technological Parameters Of The Project:**
  - Our main innovation is a new platform architecture that we developed from scratch. It allows for extreme energy efficiency.
  - The cost of running with cargo is €1 per 100 km. Any type of truck body can be installed. Battery capacity is tailored to match your required daily range.
- **Project Strengths:** This project will support the development of electric-powered transport in Ukraine, aligning with the country's goals in cooperation with the EU and a course for sustainable development.
- **Target Market:** The company is oriented towards the Ukrainian and East European markets.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 60% / OPEX 40%**

KYIV REGION

REINVENTEX LLC

Textile waste recycling infrastructure in Ukraine

- **Brief Description:** REINVENTEX LLC is Ukraine's first pilot project for recycling post-industrial and post-consumer textile waste, creating modern infrastructure for collection, sorting, and processing in line with the EU's STEP2023 Waste Strategy.
- **Products/Services:** Providing certified services for the recycling of textile waste and used goods in Ukraine, and producing innovative regenerated fibre for: nonwoven production; high-quality fibre and sliver for yarn manufacturing; short fibre for construction mixtures; and fibre containing aramid components for high-strength technical fabrics.
- **Technological Parameters Of The Project:** This business has an innovative component and enables the expansion of the range of textile materials that can be recycled into fibre.
- **Project Strengths:** The demand for recycled fibre and textile waste processing services is driven by the EU Sustainable Development Strategy for the textile and fashion industry, as well as regulatory changes in EU legislation.
- **Target Market:** The main markets for recycled fibre, which is the core product of the business, are the domestic market and, in the future, other countries experiencing a shortage of fibre for yarn production.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 90%
OPEX 10%

Type of financing:
equity financing (capital participation)

Project Status: Stands at the implementation stage: the first contracts for textile waste recycling were signed with Ukrainian textile companies; since January 2024, we have been participating in the EBRD's International Consulting for Small and Medium-Sized Enterprises project to deepen textile waste recycling, implement a quality control system, develop products based on recovered fibre, and enter exports, etc.

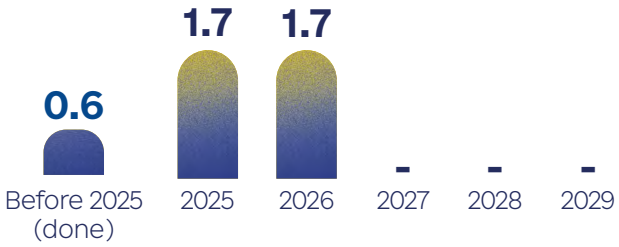

- **Expected Financial Indicators**

NPV	EBITDA (3rd year)	Project launch period
$2.5 mln	**$1.9 mln**	**2 years**
Revenue (3rd year)	IRR	DPP
$7.8 mln	**21%**	**3 years**

BUSINESS MODEL

- The price of recycled fibre will be 30% lower than that of primary fibre, making it attractive to the market - about 1 €/kg, with a potential production volume of 2,000 tonnes per year (3.5% of the market).
- Eco-insulation made from recycled raw materials could capture about 1% of the Ukrainian market due to its competitive price and safety.

INVESTMENTS IN THE PROJECT, $ MLN

- **Products/Services:** Clothing manufacturing.
- **Technological Parameters Of The Project:** TA full equipment upgrade is planned through the installation of an automated sewing complex.
- **Project Strengths:** The outsourcing market for garment manufacturing in Ukraine is underdeveloped with weak competition; the company has extensive expertise and is a leader in Ukraine's light industry sector.
- **Target Market:** The project is intended for export to external markets and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt financing, equity financing / project financing**

Project Status: The conceptualisation phase of the project has been completed.

- **Expected Financial Indicators**

NPV **$3.0 mln**	EBITDA (5th year) **$3.6 mln**	Project launch period **2 years**
Revenue (5th year) **$10.6 mln**	IRR **15%**	DPP **5 years**

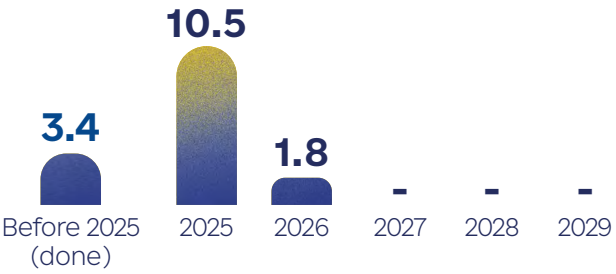

BUSINESS MODEL

- To comprehensively cover the entire range of services in Ukraine's textile industry - from raw materials and yarns to finished solutions for clients in the B2B, B2G, and B2C segments.

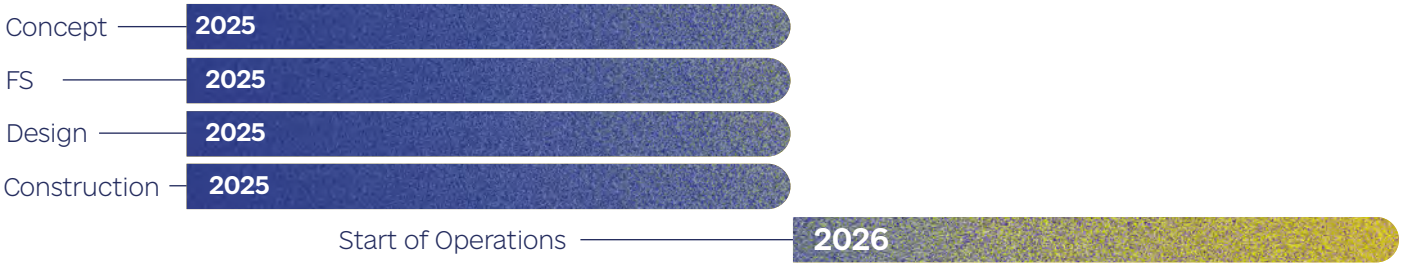

KEY PARTNERS

The company is a market leader in Ukraine's light industry sector. Owners of well-known international brands are ready to sign framework agreements for 3 to 5 years to place orders on the new equipment that will be installed.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1]The project information and financial indicators are provided by company-initiator of the project.

VOLYN REGION

INDUSTRIAL MANUFACTURING, PAPER PRODUCTS

VGP PrJSC

Integrated Production Complex for Tissue and Hygiene Products

- **Brief Description:** Development of a modern fully integrated production complex by VGP for the manufacturing of tissue base paper (tissue reels) and consumer hygiene products.
- **Products/Services:** VGP is a leading producer of consumer hygiene products in Ukraine with a 34% market share. The company's flagship brand Ruta is the most recognised among Ukrainian consumers in the tissue product segment. Export operations account for 25% of the company's revenue, with distribution reaching 24 countries in Central and Eastern Europe.
- **Technological Parameters Of The Project:** The company runs 13 production lines equipped with machinery from globally recognised manufacturers such as Gambini, PCMC, Winkler, OMET, and others. The project aims to establish a vertically integrated complex, incorporating both a paper mill and expanded converting capacities.
- **Project Strengths:** Over 25 years of experience in the industry and successful implementation of production projects. High barriers to entry protect the company from new competitors. The company demonstrates consistent revenue growth with strong profitability.
- **Target Market:** Low tissue product penetration in Eastern Europe offers significant growth potential. The addressable market includes up to 140 million consumers, with access to EU markets and potential expansion into the private label segment.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **debt, equity**

Project Status: Feasibility study under development; preliminary agreements have been reached with construction contractors and equipment suppliers.

- **Expected Financial Indicators**

NPV **$51.8 mln**

EBITDA (5th year) **$10.0 mln**

Project launch period **2.5 years**

Revenue (5th year) **$53.4 mln**

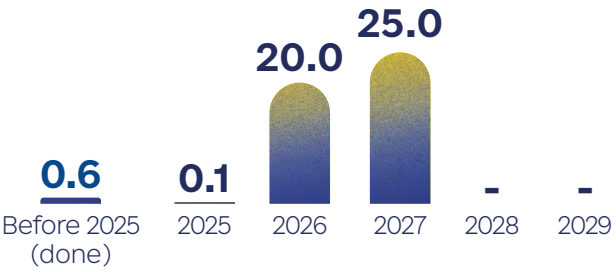

IRR **16%**

DPP **8 years**

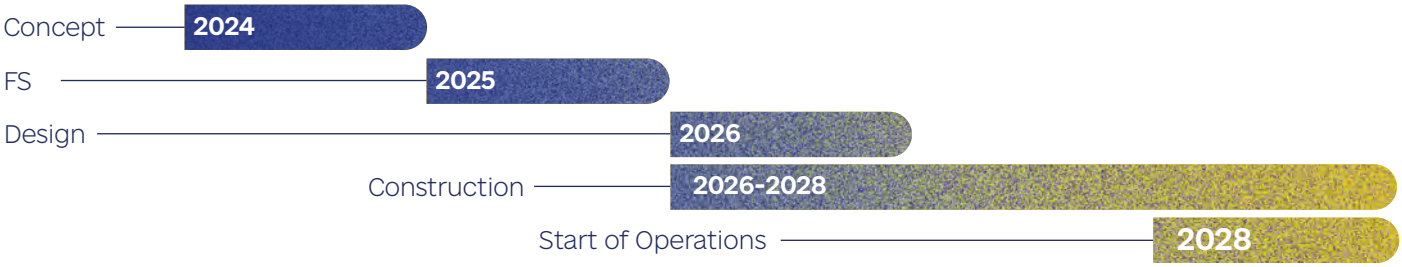

BUSINESS MODEL

- The project is built on a vertically integrated business model that will consolidate the entire production cycle - from tissue base manufacturing to the output of finished consumer hygiene products such as toilet paper, paper towels, and napkins - at a single, modern industrial site.
- This integration will significantly enhance operational efficiency, product quality, and production volumes.
- Leveraging one of the strongest and most extensive distribution networks in Ukraine, VGP is well-positioned to scale its market presence rapidly.
- The project also aims to localise and technologically modernise sanitary paper production within the country, setting a new benchmark for both the company and the industry as a whole.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

INDUSTRIAL MANUFACTURING, PAPER PRODUCTS

LIMESTONE PAPER UKRAINE LLC

YAMPIL,
VINNYTSIA REGION

Sustainable production of packaging paper, cardboard and disposable tableware from limestone

- **Brief Description:** The Project envisages the creation of ecological (without cellulose) production of packaging paper, cardboard, and disposable tableware from limestone out of Ukrainian deposits based on an eco-industrial park DNISTER.
- **Products/Services:** Creation of ecological production of packaging paper, cardboard and disposable tableware from limestone.
- **Technological Parameters Of The Project:** The technology enables the production of paper and related products without using cellulose, water, or chemicals, relying instead on an innovative thermal method.
- **Project Strengths:** Opportunity to become the leading (exclusive) operator in roll paper production in Ukraine, capturing 100% of the market.
- **Target Market:** The project is intended for export to European market and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Required financing **22.0** | **26.5** Total budget

Financing structure: **CAPEX 50% / OPEX 50%**

Type of financing: **project financing**

Project Status: Stands at the readiness for implementation stage.
Scientific and technological research has been conducted to develop production processes and technical regulations, including the creation of a 3D model of the production line. Legal registration of the eco-industrial park has been completed and permitting procedures for construction and raw material extraction are underway.

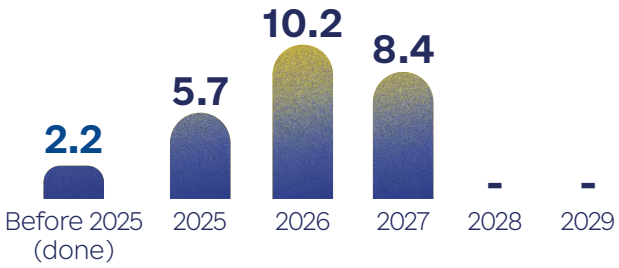

- **Expected Financial Indicators**

NPV	EBITDA (5th year)	Project launch period
$3.1 mln	**$10.3 mln**	**3 years**
Revenue (5th year)	IRR	DPP
$26.4 mln	**29%**	**3.5 years**

BUSINESS MODEL

- The quarry, located in the Yampil community of Vinnytsia region, has a capacity of 1,603 million m^3 and supplies limestone for paper production using a dry thermal method.
- The process involves unloading limestone, coarse and fine grinding, and feeding it into the mill hopper.
- Finished products are planned for export to the EU via routes through Moldova-Romania-Austria-Italy and Poland-Germany, while domestic distribution will follow major highways connecting key Ukrainian cities.

INVESTMENTS IN THE PROJECT, $ MLN

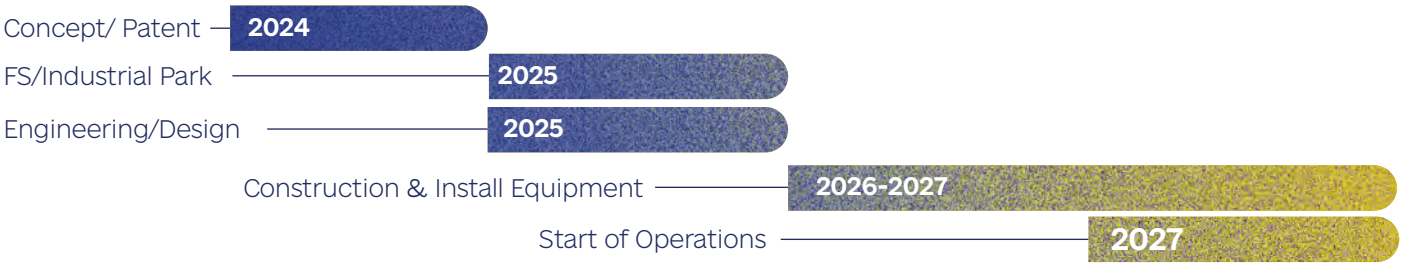

KEY PARTNERS

- **Partners:** Government of Ukraine, Territorial Community
- **Financing:** Initiator funds, Bank lending, Grants
- **Suppliers of equipment:** Henan GX-Tech & Nanjing GS Mach (China)
- **Technologies:** Proprietary & Patented
- **Consumers:**
  - UKR: Dunapack, NovaPoshta, Epicenter, oth.
  - EU: Heidelberg Group, Spar, Deutsche Post AG, other.

INCENTIVES

Profit tax is exempted for 10 years, registered in the state register as the industrial park DNISTER.

KEY POINTS OF PROJECT IMPLEMENTATION

[1]The project information and financial indicators are provided by company-initiator of the project.

INDUSTRIAL MANUFACTURING, RAW MATERIALS

KIROVOHRAD REGION

VKF VELTA LLC

Velta Kaolin Project

- **Brief Description:** The Kaolin Project by Velta aims to restore Ukraine's share in the global kaolin market, leveraging over 500 million tonnes of reserves and existing infrastructure. Driven by rising global demand and EU supply gaps due to war and sanctions, the project offers a fast, sustainable solution. It aligns with green regulations and supports recover of Ukraine's industrial capacity while targeting premium markets in construction, electronics, and eco-materials.
- **Products/Services:** 200 thousand tonnes per year of wet-processed kaolin in 2 technological lines.
- **Technological Parameters Of The Project:** The project will produce 200 thousand tonnes of granulated kaolin in 12 mm and 50 mm sizes annually using advanced beneficiation, magnetic separation, and granulation technologies.
- **Project Strengths:** The project can be deployed swiftly based on proven infrastructure of current mining business, It's positioned to capture market share amid global supply shifts and rising demand. Kaolin aligns with EU green standards and supports Ukraine's reconstruction. Product diversification ensures stability across multiple high-demand sectors.
- **Target Market:** EU (Spain, Italy), Asia-Pacific (Japan, India).

- **Projects highlights[1], $ mln**

Required financing **9.0** — **22.5** Total budget

Financing structure: **CAPEX 100%**

Type of financing: **convertible debt, equity Series A-B**

Project Status: The project is at the Pre-Feasibility stage being part of current operational unit. Kaolin reserves of 1.1 million m^3 have been estimated using K-Mine software. In January 2025, samples were collected from two kaolin domes to guide processing plans and product applications. These results will underly the design of the enrichment technology line.

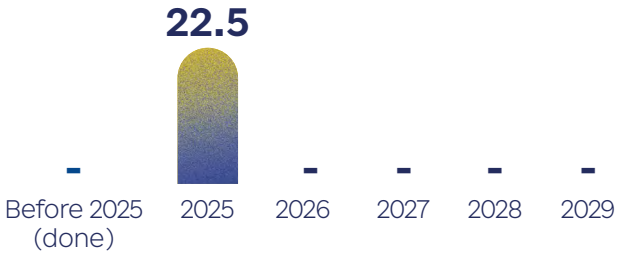

- **Expected Financial Indicators**

NPV	EBITDA (2nd year)	Project launch period
$21.6 mln	**$16.0 mln**	**1 year**
Revenue (2nd year)	IRR	DPP
$24.0 mln	**43%**	**2.1 years**

BUSINESS MODEL

- Velta will extract and process kaolin from the operating Byrzulivske deposit, focusing on the high-quality upper zones of weathering crust with reserves of 1.1 million m^3.
- Following permitting, Velta will supply raw materials for an in-house enrichment facility.
- The final product - wet-processed kaolin - will be sold at $110–130 per tonne (EXW), with low operating costs of circa $40 per tonne, due to overburden works will be part of the current mining process, ensuring strong margins.
- The model is vertically integrated, resource-secure, and designed for rapid deployment and scalability.

INVESTMENTS IN THE PROJECT, $ MLN

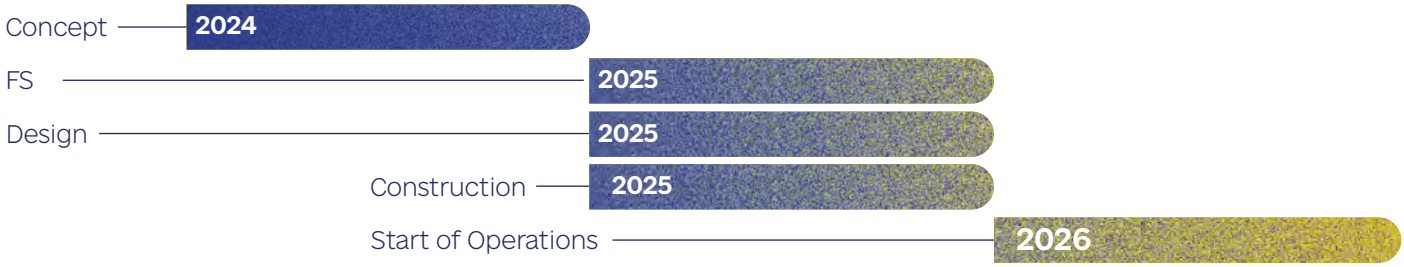

KEY PARTNERS

Ukrainian Institute of Titanium, Wardell Armstrong, SmarTech and other industry leaders. We are in a direct dialog for project financing with IFIs and financial partners.

INCENTIVES

The project will be located in Velta Industrial park in Ukraine, Kropyvnytskyi region.

KEY POINTS OF PROJECT IMPLEMENTATION

INDUSTRIAL MANUFACTURING, PACKAGING INDUSTRY

DNIPRO REGION

METAL-PRINT LLC

Production of metal packaging

- **Brief Description:** Creation of a modern production complex for manufacturing metal packaging.
- **Products/Services:** Metal packaging, chemical and paint products (paints, varnishes, automotive lubricants).
- **Technological Parameters Of The Project:** Company uses modern equipment and advanced technologies, and the specialists at METAL-PRINT are experienced professionals in this field. The company's products meet the highest international standards (ISO 9001).
- **Project Strengths:** The production is aimed at a growing market, has modern equipment and a short payback period.
- **Target Market:** The project is intended for export to external markets and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Required financing **10.0** | **25.0** Total budget

Financing structure:
CAPEX 70%
OPEX 30%

Type of financing:
debt financing / equity financing

Project Status: The conceptualisation phase of the project has been completed. To date, the following have already been launched: Lacquering line and full-color printing line; Prepress preparation complex CPT, Modern varnish and paint laboratory X-Rite, IGT; Twist-off cap production line, Metal canister production SKO-type cap production line.

- **Expected Financial Indicators**

NPV	EBITDA (5th year)	Project launch period
$4.6 mln	**$11.8 mln**	**3 years**
Revenue (5th year)	IRR	DPP
$49.1 mln	**22%**	**5 years**

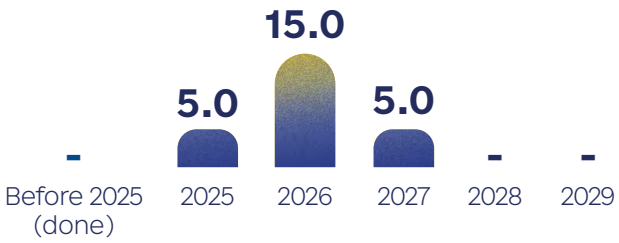

BUSINESS MODEL

- The project demonstrates extremely high profitability and stable revenue.
- Potential distribution channels are manufacturers of meat, fish, fruit and vegetable preserves, oils, animal and vegetable fats, honey, and molasses.
- Project goals are compliance with modern environmental safety standards.

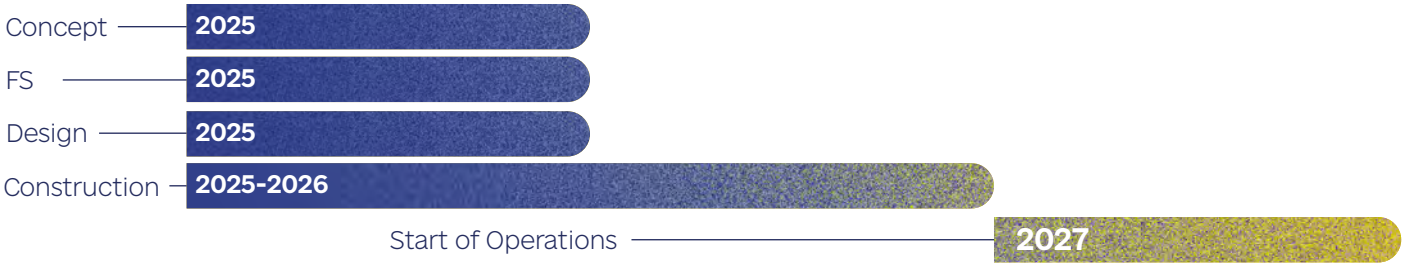

KEY PARTNERS

The project is supported by the Dnipropetrovsk Regional Investment Agency of the Dnipropetrovsk Regional Council (DIA).

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

INDUSTRIAL MANUFACTURING, PACKAGING INDUSTRY

DNIPRO REGION

ELIKSIR LLC

Production of laminate tubes for food, cosmetic and pharmaceuticals products

- **Brief Description:** The owners of business strive to develop the company and reduce production costs. This can be achieved by laminated tubes production, for its further usage in production and sale.
- **Products/Services:** The business is engaged in the production and sale of cosmetics and dietary supplements in the form of syrups, edible gel, tablets and capsules.
- **Technological Parameters Of The Project:** Modern automated lines ensure high-volume output without compromising quality. A skilled team of over 100 specialists and an in-house advanced laboratory maintain strict quality control, certified to ISO.
- **Project Strengths:** High demand for products: laminated tube - a universal packaging format with growing demand in the domestic and export markets.
- **Target Market:** On the Ukrainian market and abroad packaging in the form of a tube is very popular both in the cosmetic and in the food industries.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 80%
OPEX 20%

Type of financing:
credit, venture capital; joint venture; other joint activities

Project Status: The conceptualisation phase of the project has been completed.

- **Expected Financial Indicators**

NPV **$2.7 mln**

EBITDA (5th year) **$3.0 mln**

Project launch period **3 years**

Revenue (5th year) **$7.5 mln**

IRR **20%**

DPP **5.1 years**

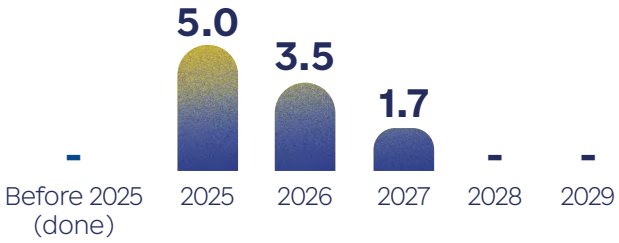

BUSINESS MODEL

- Design capacity - 50 million tubes per year, which allows the company to cover its own needs and enter the B2B market of cosmetics, pharmaceuticals, food and chemical industries.
- Project goals is to reduce the business production cost by launching the line.
- Tube production and sale.

KEY PARTNERS

ELIKSIR LLC cooperates with over 1,000 partners in Ukraine and abroad, which demonstrates strong market presence and trust in the brand.

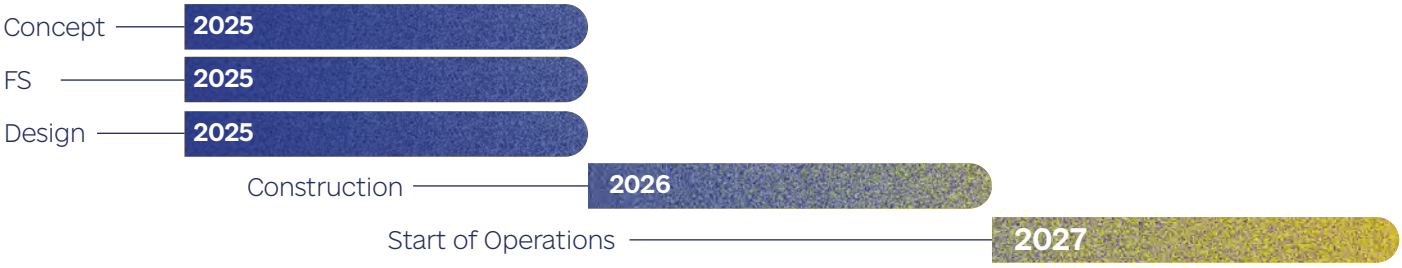

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project may be eligible for governmental incentives related to the development of the manufacturing sector, import substitution, support for production localisation, and the creation of new jobs.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

LVIV REGION

INDUSTRIAL MANUFACTURING, COSMETICS

E.D. COSMETICS LLC

Establishment of a modern laboratory for research and certification of cosmetic products

- **Brief Description:** The company is implementing two strategically important projects:

  a. Establishing a modern laboratory for research and certification of cosmetic products.

  b. Developing AI-powered software for cosmetic product analysis and oversight.

- **Products/Services:** Cosmetic products.
- **Technological Parameters Of The Project:** AI-powered software will automate and optimise processes across key stages: ingredient analysis and safety reporting during R&D, document preparation for Cosmetic Products Notification Portal and Ukrainian registration, and post-market safety monitoring based on individual consumer risks.
- **Project Strengths:** Ukraine has strong potential to lead in the European cosmetics market, actively aligning its industry with EU standards (EC 1223/2009) to ensure compliance and quality.
- **Target Market:** The project is intended for export to external markets and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 89%
OPEX 11%

Type of financing:
project financing

Project Status: The conceptualisation phase of the project has been completed.

- **Expected Financial Indicators**

NPV **$1.0 mln**	EBITDA (4th year) **$3.0 mln**	Project launch period **2 years**
Revenue (4th year) **$10.0 mln**	IRR **20.5%**	DPP **4 years**

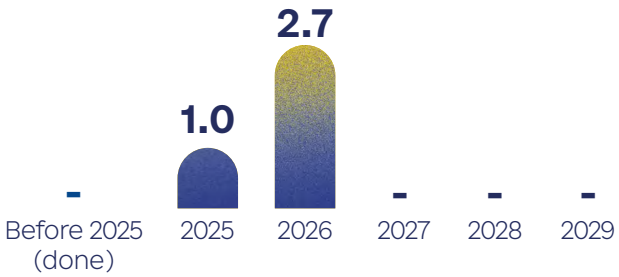

BUSINESS MODEL

- The business model focuses on producing innovative, certified cosmetic products using advanced AI-driven quality control, targeting the growing €12 billion EU cosmetics market with scalable production and strong financial returns.

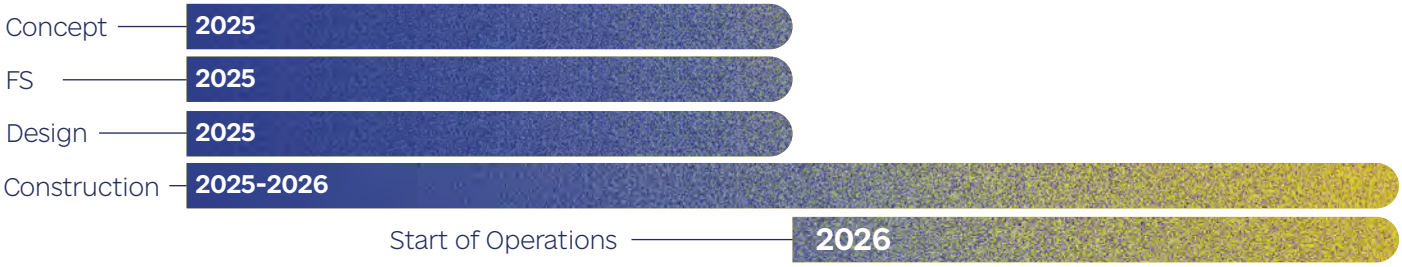

KEY PARTNERS

Associations (Association Perfumery and Cosmetics of Ukraine, COSME), scientific institutions (national universities, Institute of Biochemistry of the National Academy of Sciences of Ukraine), technical partners, regulatory authorities (Ministry of Health of Ukraine, European Commission), financial, cosmetic manufacturers and consulting companies that will provide expertise, technical support, market access and financing.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

LVIV REGION

SIROCCO ENERGY LLC

Innovative wind turbines

- **Brief Description:** Between 2026 and 2028, Sirocco Energy will launch the production of 30 kW, 100 kW, 500 kW, and 1 MW wind turbines, designed for efficient decentralised energy generation for businesses in suburban areas. By leveraging contract manufacturers for components and establishing only in-house assembly and calibration lines, the project ensures fast production scaling and attractive IRR for investors.
- **Products/Services:** Sirocco Energy offers innovative wind turbines specifically optimised for suburban environments, capable of delivering electricity at just $0.04-0.08 per kWh - up to 4x cheaper than grid power on our target markets.
- **Technological Parameters Of The Project:** Engineered for real-world suburban wind speeds (6-8 m/s), Requires 3x less space compared to traditional wind turbines, 30 kW and 100 kW models fit into standard shipping containers, simple installation and maintenance, bird-safe, no ultrasonic noise emissions.
- **Project Strengths:** Strong market demand confirmed by pre-orders, High product margins and rapid scalability of production volumes, Economic model does not rely on government subsidies, Can be deployed in locations unsuitable for traditional wind turbines.
- **Target Market:** EU, USA, and Ukraine regions where industrial electricity costs exceed $0.20/kWh.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 85%
OPEX 15%

Type of financing:
equity financing

Project Status: Preparing for production launch, certification, and building distributor partnerships.

- **Expected Financial Indicators**

NPV
$71.0 mln

EBITDA (annually)
$28.0 mln

Project launch period
3 years

Revenue (annually)
$120.0 mln

IRR
58%

DPP
7 years

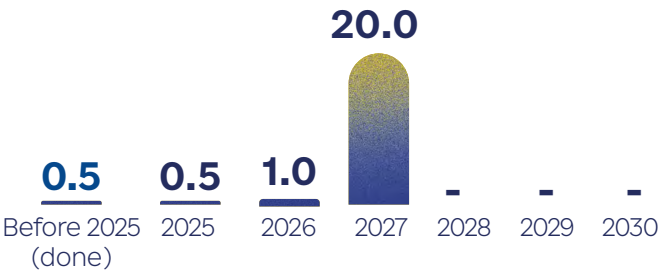

BUSINESS MODEL

- Turbine sales via distributors and direct clients, paid site testing, and maintenance.
- Target market: $48 billion in annual energy consumption by suburban businesses in the US and Europe.
- Target customers: companies in suburban zones where electricity accounts for over 30% of operational costs.

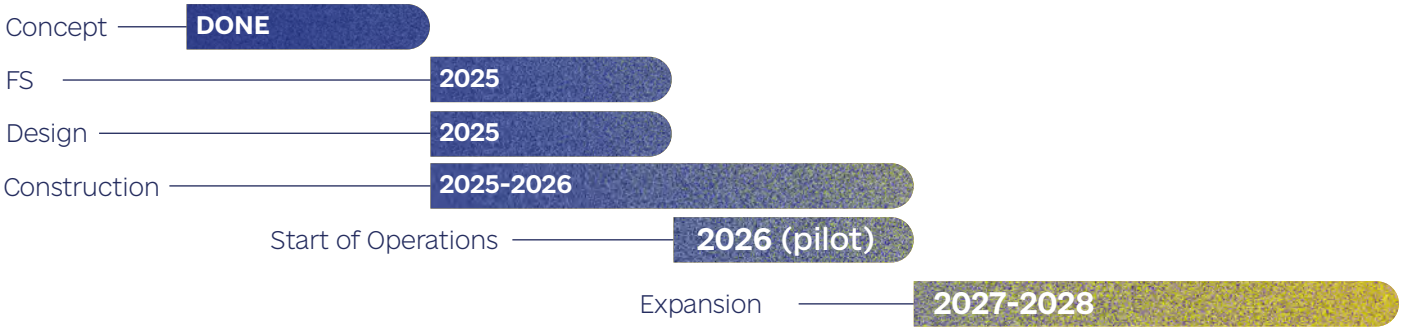

KEY PARTNERS

Apollo Spirit Sp. z o.o., Promodo, Global Ocean Link, and other private sector representatives.

INVESTMENTS IN THE PROJECT, $ MLN

KONOTOP,
SUMY REGION

INDUSTRIAL MANUFACTURING, ENGINES & TURBINES

MOTORDETAL-KONOTOP LLC

Large privatisation

- **Brief Description:** The Ukrainian engine components manufacturer, specialising in cylinder liners for internal combustion engines. The company is known for mass production and high-quality standards.
- **Products/Services:** Cylinder liners for trucks, passenger cars, ships, compressors, tractors, diesel locomotives, services for manufacturing metal products according to customer drawings, carpentry services.
- **Technological Parameters Of The Project:** The plant features a full production cycle with centrifugal casting, precision machining (up to 5 μm).
- **Project Strengths:** Global supplier with full-cycle, high-precision production and IATF-certified quality.
- **Target Market:** OEMs and aftermarket clients in the automotive, agricultural, marine, and industrial engine sectors worldwide.

Project Status: being prepared.

- **Main financial indicators[1], $ mln***

	2021	2024
Assets	10.0	7.0
Equity	1.3	0.5
Total income	19.4	12.0
Total costs	19.3	12.1
Net profit (loss)	0.02	-0.3

* According to the average annual exchange rate of the NBU in 2021 and 2024, respectively.

- **Number of employees** (as of 31.12.2024)**:** 663

Information on assets included in the privatisation object:

Property information (real estate): The object includes 56 units of real estate and infrastructure (production, storage, office buildings and structures, etc.) with a total area of 89,545.2 m^2.

Vehicle information: 55 units of motor vehicles and special equipment, including 6 units that have been mobilised.

Information about land plots: 4 registered land plots with a total area of 23.6 hectares.

List of assets (movable property) that are recorded on the balance: 2,469 units (equipment, furniture, inventory, etc.).

The main conditions for the privatisation of the company:

- Preservation of the main activities of the company;
- Repayment of debts on wages and debts to the budget within 6 months;
- Repayment of overdue accounts payable of the company existing as of the date of transfer of the ownership right to the acquired stake, except for debts to individuals and legal entities in respect of which special economic and other restrictive measures (sanctions) have been applied in accordance with the Law of Ukraine 'On Sanctions', and persons related to them, as well as creditors beneficiary of which are citizens/residents of the russian federation and/or the Republic of Belarus;
- Social guarantees to employees in accordance with the requirements of labor legislation.

4.9 CONSTRUCTION MATERIALS AND STRUCTURES

Before the start of the full-scale invasion, the market for construction materials in Ukraine was valued at $16 bn and was growing at an estimated CAGR of 10-20% per year (2016-2021)[27].

CAGR per year	market was valued at
10-20 %	**$16 bn**

Ukraine not only met its needs domestically but also **exported 5% of its production**[28]. However, **even though the full-scale invasion significantly disrupted demand and logistics, the sector has shown remarkable resilience**.

By the end of 2024, gross value added from construction reached approximately

€1 bn

rebounding from a low base during the initial invasion phase[29] and indicating a renewed upward trend in demand for construction materials.

Indeed, the construction materials and structures sector stands at the **heart of Ukraine's reconstruction strategy**. World Bank's RDNA4 estimates on housing needs are valued **at $84 bn**, commerce and industry at **$64 bn**, and transport (roads, bridges) at **$78 bn**.[30] Consequently, the total needs for construction materials are estimated at **$65 bn over a 10-year horizon**, with some market forecasts predicting a 30% increase in construction materials demand vs. pre-war levels in 2025-2030[31]. Furthermore, 90% of local needs could be covered by domestic production, provided that Ukraine attracts investments in the sector[32]. These estimates underscore the fact that construction materials and structures are not only foundational to rebuilding physical infrastructure but also represent **one of the most investable and scalable segments of Ukraine's real economy.**

Different segments of the overall construction materials and structures market remain asymmetrically developed. For example, in core categories like cement, bricks, and concrete, domestic producers can cover a substantive portion of national demand.

In 2023 and 2024, cement production stabilised at 7.4 mln tonnes and 7.97 mln tonnes, close to what is considered feasible during wartime. At the same time, exports are estimated to have hit 1.7 mln tonnes – about 15% of total production.

7.4 mln tonnes

7.97 mln tonnes

On the other hand, segments like glass, insulation, and prefabricated panels remain reliant on imports with import penetration rising from 14% pre-war to over 23% by 2023. This shift opens the door for near-term import substitution and longer-term innovation and capacity scaling. This creates opportunities in segments like prefabricated and modular construction, where demand is surging for public buildings and temporary housing. The prefabricated houses market, in particular, currently sized at around $150 mln, is projected to grow at 4–8% annually[33].

At the same time, emerging trends are shaping the next wave of investment in the sector. A growing focus is placed on green and circular production models. This creates instant opportunities for players investing in recycling infrastructure, particularly for converting rubble into secondary aggregates or low-carbon binders.

[27] - Investment Opportunities of Building Materials Sector (2024).
[28] - Structural Changes and Challenges in Ukraine's Construction Industry: Analysis and Forecasts (2024), page 2.
[29] - Trading Economics, Ukraine: GDP value add from Construction (2024).
[30] - The World Bank - RAPID DAMAGE AND NEEDS ASSESSMENT (RDNA4), February 2025.
[31] - Ukraine Construction Materials Market Outlook 2025-2030 (2025).
[32] - Structural Changes and Challenges in Ukraine's Construction Industry: Analysis and Forecasts (2024), see above 9.
[33] - Market Report Analytics (2025).

As Ukraine aligns with the EU Green Deal and climate-linked funding instruments, these innovations are likely to attract both grant support and concessional capital.

Further investment momentum is expected from regulatory and industrial incentives. Functional digital platforms such as Prozorro continue to offer real-time visibility on public procurement, helping domestic suppliers anticipate demand. In parallel, progress on harmonisation with the EU Construction Products Regulation is accelerating. Producers who align early with EU standards, such as CE-marking, will gain preferential access to a broader export market. Moreover, new industrial parks are being positioned as hubs for materials production, offering 10-year tax exemptions and VAT relief on imported machinery.

Overall, with strong fundamentals and policy momentum behind it, **the construction materials and structures sector is rapidly emerging as one that holds opportunities for early-mover investors**. As reconstruction accelerates, the ability to localise production in these critical segments may prove to be both a competitive advantage and a market-defining move.

SWOT-ANALYSIS

Strengths

- Ukraine is one of the l**argest producers of non-metallic industrial minerals** in Europe, including sand, gravel, granite, and kaolin - owing to its substantial reserves
- **Geographical clustering** of the building materials industry near logistics corridors and industrial zones
- **Increased demand for the construction services** driven by the need to rebuild destroyed infrastructure facilities and housing
- **Export potential** due to the production of the building materials exceeding domestic consumption for all key materials (cement, sand, bricks, concrete, steel etc)
- **Competitive labour costs and a technically trained workforce** concentrated in construction and materials-related industries
- **Functional digital platforms** (e.g., Prozorro) for public procurement and infrastructure reconstruction enabling real-time visibility of market demand for domestic suppliers

Weaknesses

- **Demographic crisis** with the number of workers has been steadily declining over the recent years
- **Outdated production technologies and high energy intensity** of manufacturing processes, resulting in low innovation activity and high dependency on prices for energy resources
- **Logistics and distribution challenges**, due to damaged infrastructure.
- **Increased cost of construction** due to the surging prices for energy resources and materials
- Significant resources of metallic and non-metallic minerals are **situated in the front-line zone** or in the temporarily occupied territories, i.e. in eastern and southern Ukraine which may be subject to post-war risks such as landmine contamination, occasional shelling etc.
- **Fragmentation of the domestic building materials market** and insufficient consolidation among manufacturers, as well as weak integration with design and architecture sectors, leading to underutilisation of innovative and sustainable materials

Opportunities

- **Partnership with the banking sector** to support the implementation of construction projects
- Further **development of logistics and transport infrastructure** enabling more efficient and cost-effective export options
- **Attraction of foreign direct investment** and improvement of Ukraine's overall investment climate after the end of the armed aggression
- **Cooperation with international funds and organisations** financing post-war recovery, as well as access to EU funding mechanisms and technical assistance (e.g., LIFE Programme, Horizon Europe) for innovative and sustainable materials development
- Engagement **Integration into regional value chains** through subcontracting with European and multinational construction companies operating in Ukraine
- **Development of energy-efficient technologies** and building materials, including rapid construction solutions
- **Addoption of recycling technologies**, reducing pressure on landfills and the environment, while also generating employment and fostering the growth of a secondary building materials industry
- **Development of industrial parks** offering the necessary investment incentives, such as a 10-year corporate tax exemption, VAT exemption for importing new equipment, etc.
- Gradual **harmonisation with EU Construction Products Regulation** and access to the Single Market through the ACAA agreement
- Growing demand from the modular and prefabricated construction segment for lightweight, standardised building materials

Threats

- **Declining construction workforce** caused by labor migration, security concerns, and military conscription, as well as the brain drain of technical and engineering personnel to other countries
- **Enhanced quality and safety requirements** in some markets will necessitate the implementation of advanced standards and certification systems
- **Possible scenarios of prolonged war of attrition** and, hence, a delay in post-war recovery efforts
- **Delays or inconsistencies in the harmonisation** of Ukrainian technical regulation with EU norms
- **High inflation** increases production costs and reduces demand volume for construction industry products
- **Corruption in tender procedures**, bureaucratic red tape, and lack of transparency of public contracts
- **Low share of centralised public capital expenditures** for the development of the construction industry
- **Increased competition for domestic producers** driven by the entry of major major foreign companies
- **Trade protectionism** and the introduction of EU CBAM
- **Decrease in the purchasing power of the population** that limits the demand for private housing construction

Waste Heat Recovery System

- **Brief Description:** A waste heat recovery system (WHRS) to enhance energy efficiency by converting residual heat from clinker burning process into electricity. The project aims to reduce operating costs through energy optimisation.
- **Products/Services:** The project will produce electricity from the captured waste heat in cement production, helping reduce reliance on external energy resources and enhance sustainability through lower CO2 emissions.
- **Technological Parameters Of The Project:** The installation is expected to generate up to 43 GWh of electricity annually, with significant environmental benefits.
- **Project Strengths:** The WHRS offers financial savings in energy costs, environmental benefits, and increased operational efficiency.
- **Target Market:** Industrial sectors reliant on cement production, with a focus on entities seeking sustainable energy solutions in Ukraine amidst increasing energy prices.

BUSINESS MODEL

- Kryvyi Rig Cement's business model involves implementing a waste heat recovery system (WHRS) to convert residual heat from clinker burning process into electricity, enhancing production efficiency and reducing energy costs.

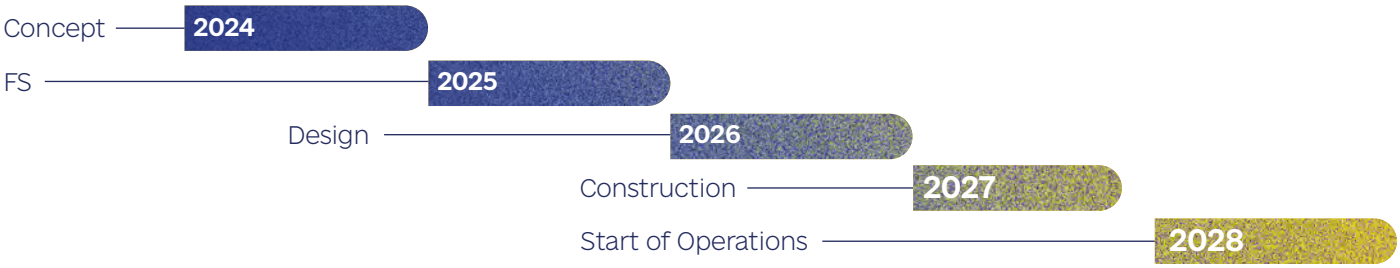

KEY PARTNERS

The project relies on partnerships with equipment suppliers and technological providers for WHRS installation, alongside financial institutions covering 70% of the project's debt financing.

INVESTMENTS IN THE PROJECT, $ MLN

Clinker Kiln Capacity Increase and Alternative Fuel Introduction

- **Brief Description:** The project involves upgrading the clinker kiln to enable the utilisation of alternative fuels / Refuse-Derived Fuel (RDF) at up to a 45% Thermal Substitution Rate (TSR), and increasing its capacity to 4.0 thousand tonnes per day (a 15% increase) to meet growing cement demand and capitalise on the expanding alternative fuel market in Ukraine.
- **Products/Services:** The project will enable Kryvyi Rig Cement to produce greater quantities of clinker with enhanced efficiency, while adopting alternative fuel sources, reducing reliance on traditional coal.
- **Technological Parameters Of The Project:** The introduction of new technologies - such as an in-line calciner, a new cross-bar cooler, and an intake and feeding line for alternative fuel / RDF - will reduce coal usage by up to 45%, lower CO_2 emissions by up to 10%, and contribute to the circular economy.
- **Project Strengths:** Significant increase in kiln capacity and energy cost reduction through alternative fuel / RDF use in pyro-process and contributing to worldwide initiative to tackle green house gas emissions.
- **Target Market:** The primary market includes construction ventures in Ukraine, necessitating high-quality cement.

- **Projects highlights[1], $ mln**

Financing structure:

UKRTRADE CAPITAL

Construction of two precast concrete plants

- **Brief Description:** Launch of two precast concrete plants in Kyiv and Lviv to provide cost-effective, high-quality materials for the construction of a 150,000 m^2.
- **Products/Services:** Production of precast concrete components to facilitate fast, cost-effective construction of real estate projects.
- **Technological Parameters Of The Project:** Project uses advanced Finnish precast technology and is powered by renewable «green energy», aiming to replace outdated plants in Ukraine with efficient, eco-friendly solutions to transform local construction practices.
- **Project Strengths:** Technology uses 20% less concrete, 30% less steel and 50% fewer workers, alongside 20% lower costs and rapid year-round construction.
- **Target Market:** Targeting Ukraine's reconstruction market, the project addresses urgent housing needs for displaced people, attracting private high-earners, first-time buyers, government bodies, foreign institutions and B2B clients.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 80%
OPEX 20%

Type of financing:
equity / project finance / debt

Project Status: At the ready for implementation stage, with land ownership secured by one of the business partners. Supported by an experienced team, financial models for both precast plants are completed, with ongoing discussions on securing investment to commence construction.

BEREZAN FLOAT GLASS PLANT LLC
AMC CITY ONE ASSET MANAGEMENT LLC

Construction of a float glass plant

- **Brief Description:** Establishing a float glass plant as a key producer in the domestic market. The project seeks to capture a substantial market share and serve as the core of a glass industrial cluster within a specified industrial zone.
- **Products/Services:** The plant will produce float glass in thicknesses ranging from 2 to 12 mm, adhering to standards M0, M1, M2 as per DSTU, available in formats PLF, DLF, TWIN with specific dimensions.
- **Technological Parameters Of The Project:** The project utilises advanced furnace technologies for energy efficiency and glass quality, verified by Celsian, while integrating green innovations to meet EU environmental standards.
- **Project Strengths:** With strong domestic market potential and no local glass production, the project offers opportunities to scale and gain a substantial growth.
- **Target Market:** Located 70 km from Kyiv, the project targets the city's robust market demand, attracting construction and industrial sectors seeking reliable local glass supply.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 65%
OPEX 35%

Type of financing:
debt

Project Status: Ready to build, with 20 ha of industrial land owned. Key regulatory and civil works completed, including construction permits, city planning consent, preliminary construction works, environmental assessment and design, advance payment for key refractories made.

- **Expected Financial Indicators**

NPV **$38.1 mln**	EBITDA (2030) **$40.5 mln**	Project launch period **3 years**
Revenue (2030) **$103.9 mln**	IRR **46%**	DPP **6.7 years**

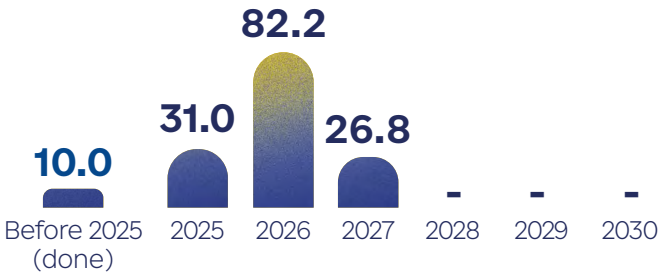

BUSINESS MODEL

- Utilising local silica sand deposits and a strategic location, the project plans a 600 tonnes per day float glass line that seamlessly integrates raw material sourcing, production and innovation into coated and insulation glass.

KEY PARTNERS

Partnerships with leading glass manufacturer; partnership with leading global engineering firm for EP contract and sourcing refractory materials, furnace technology, and silica sand. Strong ties to Kyiv construction market.

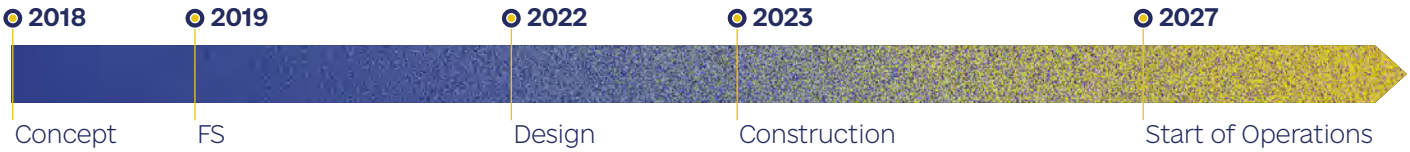

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project is located within an industrial park and has obtained industrial park status, in 2024 the project have received state support for utilities construction under industrial parks support scheme.

DNIPROMETYZ TAS LLC

Construction of a new hot-dip galvanising line for steel wire

- **Brief Description:** Project plans to construct a new hot-dip galvanising line to improve operational efficiency and optimise energy consumption. Diversification into higher-margin products.
- **Products/Services:** Production of high-quality thin (0.7-1.6 mm) and medium-diameter wire (1.8-5.0 mm), including low-carbon, medium- and high-carbon steel grades. Thermally treated and untreated, with commercial and heavy zinc coatings.
- **Technological Parameters Of The Project:** Unit's capacity - 24,000 tonnes per year. New energy-saving equipment is used on the furnace and zinc bath. Zinc coating measurement system allows to control coating thickness on each of the 45 strands.
- **Project Strengths:** Reduced production costs, improved space efficiency, production capacity increasing, strategic investment in the cable industry.
- **Target Market:** For cable armoring wires – European, North American, Middle Eastern markets. Fencing, construction, agriculture are of a high demand in Ukraine, Moldova, Poland, Germany and other European countries.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 90%
OPEX 10%

Type of financing:
debt

Project Status: 100% ready for implementation with completed pre-project planning, infrastructure development (workshop, power and other facilities) and a professional team. Detailed technical, production and market analyses have been fulfilled. Existing production of semi-finished wire.

- **Expected Financial Indicators**

NPV	EBITDA (annually)	Project launch period
$1.5 mln	**$0.9 mln**	**3 years**
Revenue (annually)	IRR	DPP
$1.4 mln	**26%**	**4.8 years**

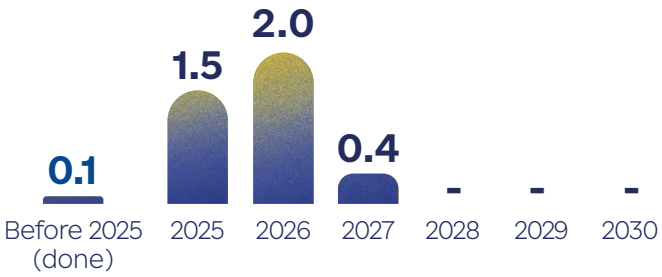

BUSINESS MODEL

- Changing of product range from relatively low-margin fencing wires into high-margin cable industry products, the model focuses on efficiency by gradually decommissioning old lines, aiming for an annual production capacity of 24,000 tonnes at an average diameter of 1.6 mm.

KEY PARTNERS

Already established cooperation with partners in EU and potential customers in MENA countries and North America.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

IVANO-FRANKIVSK / CHERNIVTSI REGIONS

ART BUD SERVICE LLC

Construction nails production

- **Brief Description:** Establishing a production complex for manufacturing nail products to gain a strong position in the Ukrainian and global construction nails markets.
- **Products/Services:** Coiled nails, construction and roofing nails.
- **Technological Parameters Of The Project:** The project utilises advanced industrial nail production equipment supplied by Taiwanese company, including multiple high-speed nail making machines, a 6-block wire rod drawing line, thread rolling and roofing nail machines, an automated collating and packaging system, and a galvanising line, ensuring high efficiency and product quality.
- **Project Strengths:** The project is profitable and effective for implementation, which is confirmed by indicators of profitability and margin, as well as investment appeal.
- **Target Market:** 70% - export to the EU & North America, 30% - domestic market in Ukraine.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **equity, leasing, project financing**

Project Status: Project is undergoing feasibility study.

- **Expected Financial Indicators**

NPV **$10.4 mln**

EBITDA (4th year) **$7.7 mln**

Project launch period **3 years**

Revenue (4th year) **$29.8 mln**

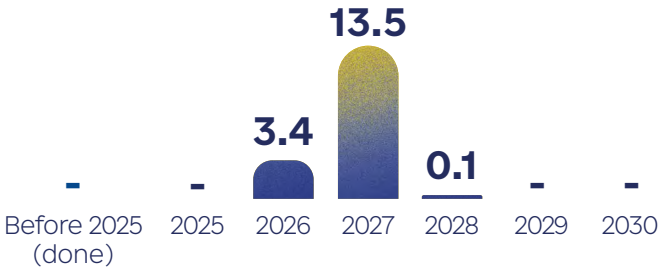

IRR **23%**

DPP **6.3 years**

BUSINESS MODEL

- Art Bud Service LLC leverages its 15 years of construction expertise to establish a nail production facility, targeting manufacturers, distributors, and construction companies.
- The enterprise plans a land acquisition to build a 4,000 m^2 property complex for production and administration.
- Sales markets will be expanded sequentially, starting from Ukraine and European regions, progressing to North America within two years.

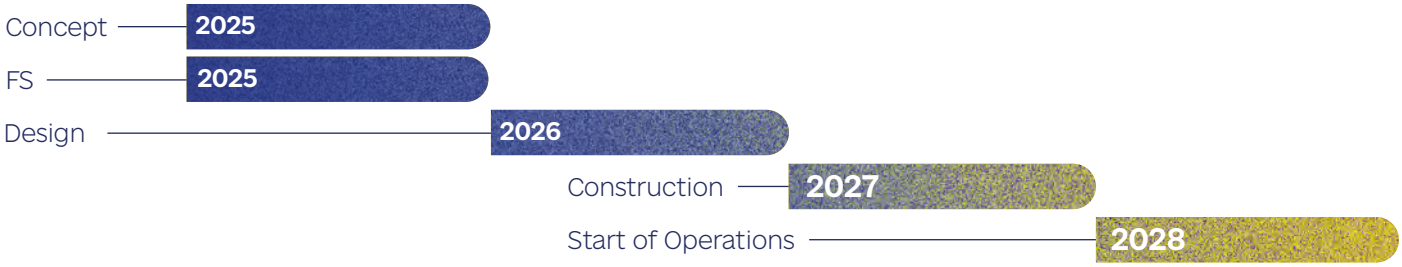

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

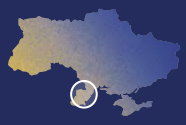

Konstruktyv LLC specialises in providing comprehensive building material supplies from leading brands. Stafplast LLC focuses on recycling PET plastic, enhancing sustainability through expanded capacity and innovative closed-cycle manufacturing. The main supplier of equipment for the project is Taiwan Metiz Alliance Rost Group & Technology Co. Ltd.

KEY POINTS OF PROJECT IMPLEMENTATION

CONSTRUCTION MATERIALS AND STRUCTURES, BUILDING MATERIALS

ODESA REGION

ENERGOBUDIVNYK PRIVATE ENTERPRISE

Expansion of woodworking – timber & furniture panels

- **Brief Description:** Reconstruction of a sawmill complex for full-cycle wood processing, including the construction of a biomass-fired thermal power plant (TPP) and a wood pellet production facility. The project aims to increase production capacity and focus on high-margin structural timber products.
- **Products/Services:** A range of construction timber products, including building boards, glued structural timber, BSH beams, KVH structural beams, profiled elements, wood pellets, furniture panels, thermally modified wood, and other value-added wood products.
- **Technological Parameters Of The Project:** Advanced technologies for sorting, milling and drying wood, including green innovations like efficient drying systems and sustainable practices to reduce waste and energy usage.
- **Project Strengths:** High global wood demand and prices, coupled with Ukraine's urgent need for building materials following significant infrastructure and housing losses.
- **Target Market:** International markets in Europe (Italy, Romania), China and Israel, where 100% of products were exported before the war.

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **project finance**

Project Status: At the feasibility study stage, with land secured for construction and project solutions developed for new capacity building and the addition of new equipment.

- **Expected Financial Indicators**

NPV **$49.2 mln**	EBITDA (5th year) **$16.5 mln**	Project launch period **3 years**
Revenue (5th year) **$43.0 mln**	IRR **27.2%**	DPP **6 years**

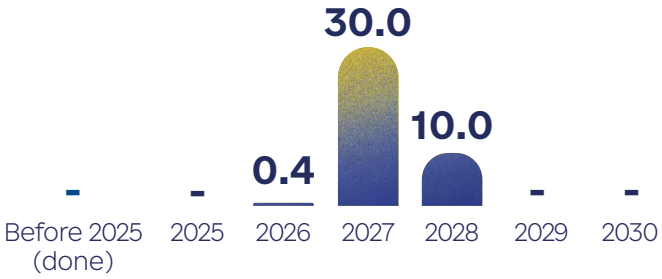

BUSINESS MODEL

- Expanding sawmill operations for high-value structural timber, as well as integrating waste-free production for energy-efficient wood pellets, with plans to produce modular wooden homes and turnkey building kits for residential and commercial use.

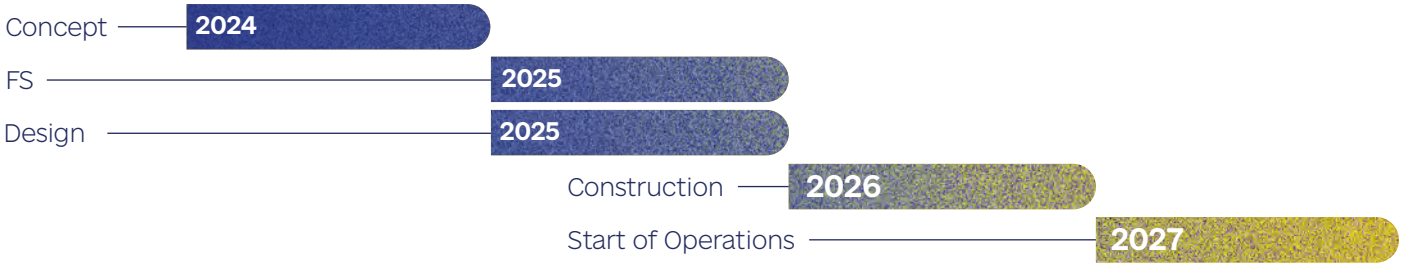

KEY PARTNERS

Strong relationships with nearly all forestry enterprises in Ukraine, using advanced Harvester complexes for timber procurement services, while exporting products to markets in Europe, China and Israel.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

KYIV REGION

RED BUD LLC

Manufacturing of sandwich panels

- **Brief Description:** Establishing a modern facility to manufacture sandwich panels for efficient construction of industrial, commercial, and modular buildings.
- **Products/Services:** Sandwich panels with mineral wool and PIR (polyisocyanurate) insulation cores, applicable for rebuilding infrastructure. Product meets growing energy efficiency and fire safety standards.
- **Technological Parameters Of The Project:** High production capacity - modern and efficient set-up with annual output of 480,000 linear meters of sandwich panels (1 shift, 80% utilisation).
- **Project Strengths:** This project is a promising investment in construction materials, driven by strong financial performance and high demand in Ukraine's post-war reconstruction.
- **Target Market:** Main focus - Ukraine, opportunity to enter the EU (in particular, Eastern European markets - Poland, Romania, Baltics).

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 90%
OPEX 10%

Type of financing:
debt financing, leasing, project financing

Project Status: The project is currently under implementation. The land is owned. Preparatory work for obtaining permits is underway. The selection of key technological equipment is in progress. Design and engineering works are scheduled to begin upon final equipment selection.

- **Expected Financial Indicators**

NPV **$0.8 mln**	EBITDA (3rd year) **$1.7 mln**	Project launch period **2 years**
Revenue (3rd year) **$15.0 mln**	IRR **18.7%**	DPP **5 years**

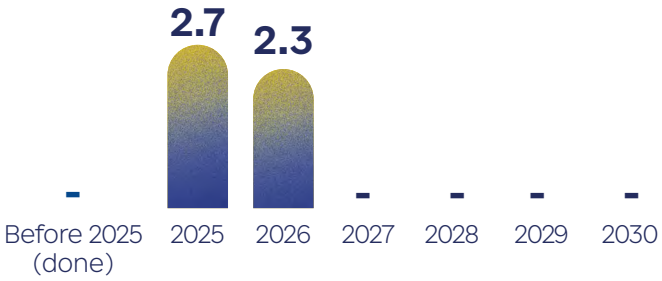

BUSINESS MODEL

- Red Bud LLC specialises in the design, and construction of modular buildings and heavy-duty construction.
- The company has its own production of prefabricated buildings, with walls made from sandwich panels.
- The company targets construction companies in Ukraine and the EU, with logistics and certification bodies for efficient cross-border sales.

KEY PARTNERS

Key Clients include public sector organisations, military units, branches of the Armed Forces of Ukraine, the National Guard, agricultural enterprises and holdings, MHP, and construction companies.

INVESTMENTS IN THE PROJECT, $ MLN

BUSINESS MODEL

- The company operates siding production facility in Vinnytsia since 2007.
- Bazis 2011 is a domestic leader in vinyl siding industry and plans to launch production of moulded siding to extend its product portfolio and increase local market share by 20%.
- The company employs more than 120 people, and 36 new jobs will be created during the project implementation.
- Bazis 2011 has a significant export potential to the EU markets and has a network of sales branches across Ukraine and a representative office in the EU.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

[1]The project information and financial indicators are provided by company-initiator of the project.

4.10 REAL ESTATE AND HOUSING

In the housing market, the war has significantly transformed both the overall situation and development trends. In the initial months of the full-scale invasion, property sales and new construction volumes dropped sharply. However, by 2023, signs of recovery had begun to emerge, particularly in the safer regions. The market has become increasingly regionally segmented: in relatively secure western and central regions, demand for housing has risen due to the influx of internally displaced persons, while in the frontline eastern and southern regions, activity has nearly come to a standstill. It is estimated that over 61% of development companies resumed launching new projects in 2023-2024, either fully or partially. Priority was given to completing projects that had been started before the war, particularly residential complexes in Kyiv and the western regions of the country, where there was no significant destruction. Some developers have shifted their focus – moving away from luxury housing towards the construction of more affordable, or even temporary, housing for internally displaced persons.

It is estimated that over 61% of development companies resumed launching new projects in 2023-2024, either fully or partially. Priority was given to completing projects that had been started before the war, particularly residential complexes in Kyiv and the western regions of the country, where there was no significant destruction. Some developers have shifted their focus – moving away from luxury housing towards the construction of more affordable, or even temporary, housing for internally displaced persons.

Industrial and warehouse real estate has proven to be one of the few segments relatively resilient to the new conditions and has begun to experience growing demand. Due to the restructuring of logistics chains - including port blockades and the reorientation of exports towards the western borders - demand for warehouses and logistics complexes in central and western regions has surged. In the Kyiv and Lviv regions, there is a shortage of warehouse space, with vacancy rates at a minimum and demand continuing to rise.

Ukraine has already launched reconstruction programmes aimed at stabilising the housing sector. In 2023, the comprehensive **eVidnovlennia** housing recovery programme was introduced: citizens whose homes were damaged can apply via the Diia portal to receive funding for repairs or rebuilding.

As of mid-2025, more than 57,000 households have benefited from the programme, with over $5.8 mln allocated to housing repairs and reconstruction.

households	allocated over
57,000	**$5.8 mln**

The government has prioritised the restoration of housing and critical infrastructure to enable people to return to de-occupied communities. Another key state-supported initiative is the **YeOselia** affordable mortgage programme, which enables citizens – particularly key professionals and military personnel – to obtain low-interest loans for purchasing homes. Since the programme's launch in 2022, more than 17,000 families have received mortgage loans totalling **$681 mln**, including **2,334 loans** issued in 2025 alone. This scale of support reflects not only growing demand but also the government's prioritisation of housing access as a pillar of long-term recovery.

Pilot projects for comprehensive reconstruction are already being implemented in the most affected settlements, testing new approaches to restoring entire towns and villages – efforts that also contribute to broader economic stability. International partners have taken responsibility for parts of the reconstruction of certain communities: for instance, EU countries are financing the construction of modular housing and the renovation of schools and hospitals in de-occupied areas.

Additionally, new legislation has been adopted to simplify land allocation for reconstruction, project approval procedures, and tender processes - all with the aim of accelerating the start of construction. In particular, industrial parks are offering ready-to-build sites with tax incentives and pre-developed infrastructure, providing a convenient starting point for both developers and manufacturers.

In parallel, the state is laying the groundwork for large-scale post-war reconstruction. A number of key institutions and mechanisms have already been established, including the State Agency for Restoration and Infrastructure Development, the Fund for Eliminating the Consequences of Aggression, and an international donor coordination platform. Ukraine estimates its total recovery needs over **the next 10 years** at more than **$500 bn**.

A significant share of this funding is expected to be directed towards real estate: the housing sector alone requires around $84 bn for reconstruction and new development, while the commercial and industrial sectors will need tens of billions more (approximately $64 bn is needed just for restoring businesses and trade infrastructure). Clearly, funding of this scale will only be possible through a combination of international assistance and private capital.

In terms of construction innovation, the war has prompted the industry to explore new technologies for rapid reconstruction. Developments are underway involving the use of 3D-printed housing and modular prefabricated structures that can be quickly assembled on the sites of destroyed homes. Pilot projects for modular towns for displaced persons have already been implemented - prefabricated houses were installed within just a few weeks. Although these buildings are currently temporary, the experience gained in rapid construction is expected to be applied to permanent housing in the future.

Ukraine is also placing growing emphasis on **Building Information Modelling (BIM) technologies** in the design process. Digital models of buildings will enable more efficient planning of large-scale post-war reconstruction, including entire neighbourhoods. Several cities have already commissioned masterplans from international architects who actively use BIM and smart-city approaches in their concepts for post-war redevelopment.

In summary, **Ukraine's real estate market faces years of intensive reconstruction ahead** – a process that will effectively amount to a construction boom. This presents an opportunity for investors to enter a reviving market while contributing to the country's recovery. Naturally, such investments come with elevated risks as long as the war continues. However, the government and international institutions are working to mitigate these risks through guarantees and insurance mechanisms.

In the coming years, key investment areas will include housing (mass construction for displaced persons and returnees), infrastructure (bridges, roads, and utility networks - which will increase the value of surrounding real estate), and industrial facilities (as regional diversification of production will require new factory sites). **The Ukrainian government is committed to partnering** with the private sector in these efforts, recognising that the scale of reconstruction cannot be managed without private support and expertise.

SWOT-ANALYSIS

Strengths

- **Macroeconomic stabilisation potential,** supported by positive NBU forecasts: inflation is expected to decline to 8.7% by end-2025 and to 5% in 2026, with projected GDP growth of 3.1% in 2025 and up to 3.9% in subsequent years
- **Consistently high demand** for residential, warehouse, and land assets in relatively safe regions of Ukraine
- **Flexibility and resilience of construction companies**, demonstrated by their rapid adaptation to shifting market conditions and wartime disruptions
- Rising market interest in **ecological and energy-efficient buildings**, aligned with public expectations and global sustainability trends
- **Advanced digitalisation** of permitting and real estate registration processes, enabled through platforms such as the Unified State Electronic System in the Construction Sector (USESCSS), enabling faster and more transparent approvals
- **Flexible and diversified development models**, including residential-commercial complexes, multifunctional hubs, industrial clusters, smart housing, co-living formats, and reconversion of existing assets

Weaknesses

- **Regulatory complexity and institutional fragmentation**, reflected in insufficient transparency and lengthy permitting procedures (particularly where not yet digitalised), low levels of trust in regulatory and judicial institutions, and limited capacity of local authorities to implement complex housing projects
- **Restricted access to affordable financing**, including the lack of long-term lending instruments and mortgage products for the general population beyond state-supported programmes, constraining both demand and supply in the housing market
- **Ageing and underdeveloped infrastructure**, particularly in smaller communities, resulting in high costs for utility connections (electricity, water, heating) and insufficient network capacity to support new residential developments
- **Slow progress of systemic reforms**, including urban planning, incomplete land reform, and an underdeveloped regulatory environment, all of which deter investment and innovation in the sector
- **Labour force shortages and outmigration**, especially in war-affected regions, limiting construction capacity and increasing project timelines and costs

Strengths

- Sector-wide **adaptation to wartime realities**, including the integration of bomb shelter infrastructure and improved energy efficiency in design and planning standards
- Growing domestic **demand from internally displaced persons** (IDPs) and returning migrants, reshaping residential market needs, especially in western and central regions

Weaknesses

Opportunities

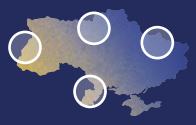

- **Strategic progress towards EU accession**, fostering legislative convergence, investment alignment, and long-term access to EU structural and financial instruments
- **Expansion of war risk insurance and blended finance instruments**, supported by Export Credit Agencies, MIGA, DFC, the EBRD, and other partners
- **State-supported housing programmes** backed by international donors (e.g., YeOselia, eVidnovlennia, KfW's Housing for IDPs programme, and initiatives by UNDP, UNHCR, and IOM), helping to scale post-war reconstruction to a certain extent
- **Emerging potential for REITs** to mobilise institutional and retail capital into income-generating residential and commercial assets, in line with global investment trends
- **National reconstruction programme** prioritising large-scale housing construction, industrial zones, and new urban developments, including the adoption of standardised project models
- **Availability of investment incentives** and project-based support, such as industrial parks, projects with significant investments, and tax or infrastructure compensations
- **Rapid deployment of modern construction technologies**, including modular housing and 3D printing, enabling faster and more cost-effective reconstruction
- **Transparent digital platforms** supporting investor engagement and project implementation, such as DREAM, Prozorro, and others

Threats

- **Geopolitical instability and prolonged military aggression** by the russian federation, leading to large-scale destruction of critical and housing infrastructure, widespread deterioration of utility systems, and population displacement
- **Heavy reliance of the national economy on external financing**, increasing vulnerability to shifts in donor and partner priorities
- **Supply chain disruptions and logistical instability**, driven by ongoing military operations and border constraints
- **Volatility in prices for raw materials**, fuel, and energy, compounded by declining household purchasing power
- **Reduced investment activity by foreign investors**, due to elevated risk perceptions and prolonged uncertainty
- **High regulatory burden, legal instability, and strong dependence on government policy decisions**, creating an unpredictable business environment
- **Fiscal pressures and limited public budget capacity**, restricting state support for housing and infrastructure development
- **Barriers for foreign investors**, including currency controls and difficulties in repatriating profits

REAL ESTATE AND HOUSING

REAL ESTATE, PROPTECH

DOMOVA LLC

DOMOVA - Collective Sales Platform for Aging Housing Stock

- **Brief Description:** DOMOVA is an online platform that offers a unique solution for emergency and aging housing stock. It allows apartment owners to submit sale requests and unite for the collective profitable sale of their entire building as a single investment opportunity. The platform supports both sellers and buyers throughout the process - from the initial request to signing contracts - by coordinating owners, providing legal assistance, and working with relocation partners. DOMOVA holds registered trademarks in Ukraine, the USA, the UK, Moldova, Switzerland, and Monaco. The project is proactive and positioned for further scaling.
- **Products/Services:** Online platform for complex collective property sales.
- **Technological Parameters Of The Project:** Apartment owners in a damaged building apply through the platform. Once all owners join, the property is packaged as a single investment project. Investors gain access to fully consented buildings ready for acquisition. Legal, logistics, finance, and relocation processes are managed by a dedicated partner network.
- **Project Strengths:** A scalable and replicable model with strong ESG impact. It contributes to addressing the issue of emergency and aging housing stock. It is indispensable in the current realities of high wartime destruction.
- **Target Market:** Ukraine, the EU, and the USA. Customers: property owners in emergency and aging buildings; private investors; real estate developers; construction companies.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 70%
OPEX 30%

Type of financing:
equity finance

Project Status: DOMOVA is at TRL 9, with the platform proven in an operational environment where sellers use it for collective sales, attracting investors [DOMOVA.com]. As of 2025: 5,000 + buildings in Ukraine and Moldova; 100+ sellers registered; 15+ buyers registered; 5 ready-for-buy-out buildings; 50+ buildings in preparation as investment projects; 2 strategic real estate partnerships established.

- **Expected Financial Indicators**

NPV
$1.3 mln

EBITDA (3rd year)
$1.7 mln

Project launch period
2 years

Revenue (3rd year)
$4.3 mln

31.6%

DPP
4.4 years

BUSINESS MODEL

- Implementation of a commission-based business model that includes a 7-12% service fee, complemented by investor, subscription packages and paid access to qualified sales requests.

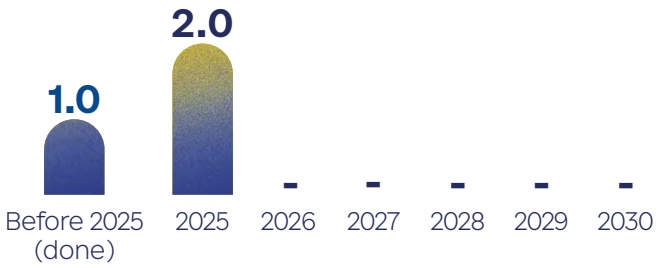

KEY PARTNERS

Local real estate agencies, relocation partners, legal experts, redevelopment investors, national and local governments, municipal authorities, architects, urban planners and Non-Governmental Organisations.

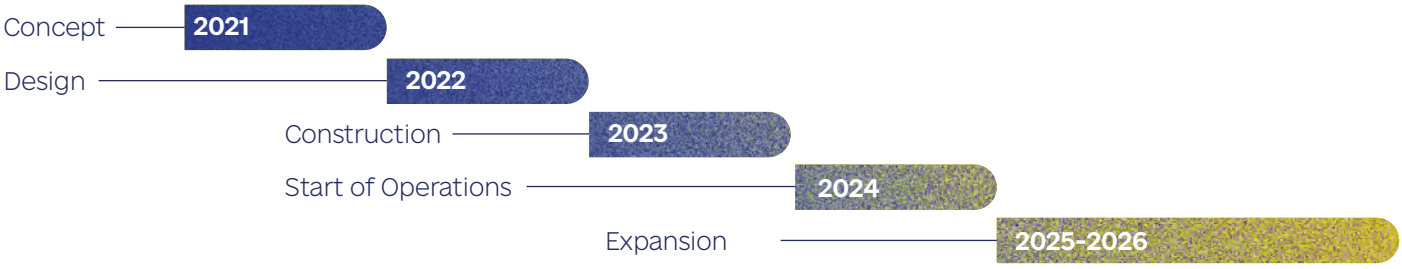

INCENTIVES

The platform serves as a business solution for governments to renew emergency and aging housing stock through private capital. Eligible for support under urban revitalisation and housing renewal programmes.

KYIV REGION

REAL ESTATE, EDUCATION

KSE UNIVERSITY

GROWTH AND DEVELOPMENT OF KSE UNIVERSITY

- **Brief Description:** The project expands KSE campus to enlarge higher- and vocational-education capacity, add new scientific and engineering labs, and double enrolment to 2,500 students by 2028 — positioning **KSE as Ukraine's gateway for human capital** and a launch-pad for joint industry labs, spin-offs, and customised workforce programs.
- **Products/Services:** KSE currently educates approximately 1,000 students across a growing portfolio of Bachelor's, Master's, and PhD programs in economics, public policy, IT, and engineering. It also offers 3-4 month upskilling vocational programs for CNC operators, welders, and other in-demand technical roles.
- **Technological Parameters Of The Project:** Planned investments include expanding academic facilities, equipping makerspaces and labs for engineers, adding modern sports facilities, building bomb shelters to ensure uninterrupted learning, and developing landscaped public spaces for students and community use.
- **Project Strengths:** KSE's agile governance and global network enable rapid program launches, deep industry partnerships, and strong alignment with Ukraine's recovery needs. The new campus will be a platform for innovation, talent development, and applied problem-solving.
- **Target Market:** Priority growth in Ukraine's education sector.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 100%

Type of financing:
debt, project finance

Project Status: KSE has secured ownership of a building complex of approximately 14,000 m² on the Dnipro River embankment, near a large park area. A campus concept design has been developed, and planning is underway to transform the site into a modern academic and innovation center.

- **Expected Financial Indicators**

NPV	EBITDA	Project launch period
without profit	**without profit**	**1 year**
Revenue	IRR	DPP
without profit	**without profit**	**without profit**

BUSINESS MODEL

- Fundraising will cover 80% of the tuition cost. KSE University's operating expenses are planned on a non-profit basis.

KEY PARTNERS

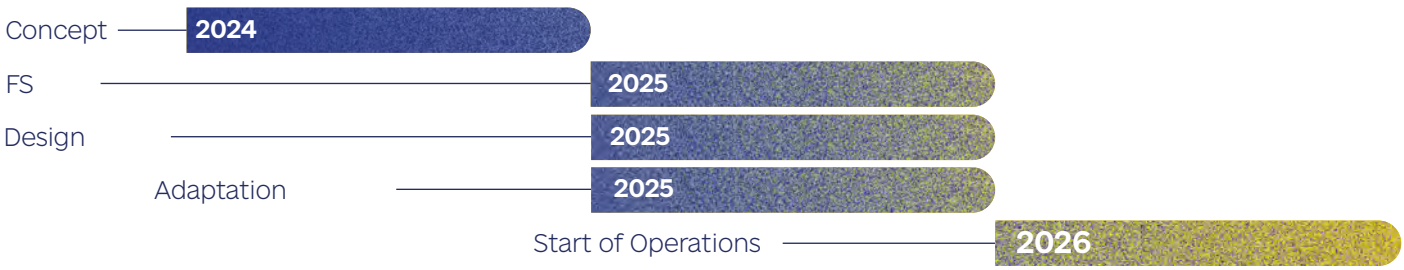

KSE is part of the CIVICA alliance, collaborating with top global institutions such as LSE, ETH Zürich, Bocconi and IE University. It partners with Olin College to launch new engineering programs and offers a dual-degree with the University of Houston.

Students gain hands-on experience through internships at the World Bank, the National Bank of Ukraine, and leading firms such as Genesis, Dragon Capital, and PUMB.

IVANO-FRANKIVSK REGION

REAL ESTATE, COMMERCIAL REAL ESTATE

PROMPRYLAD.HOLDING LLC

PROMPRYLAD PROJECT

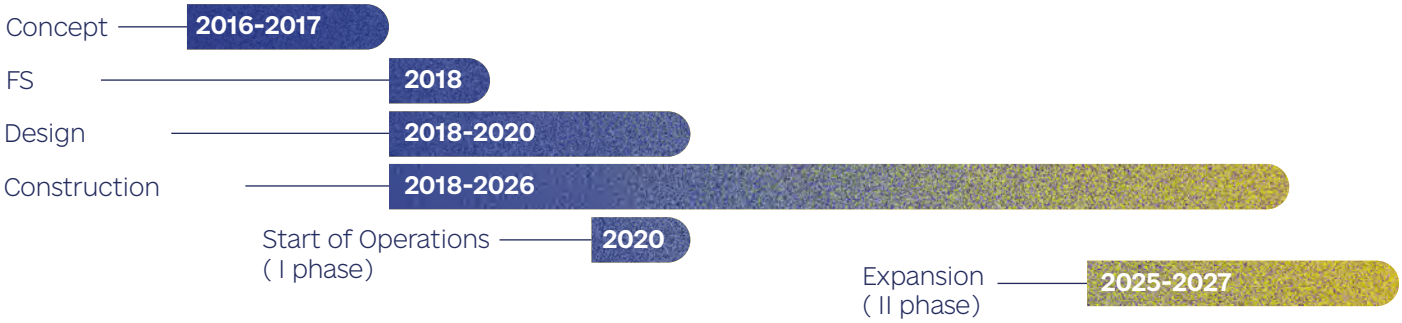

- **Brief Description:** Promprylad is an impact investment project revitalising a former industrial site in Ivano-Frankivsk. It brings together the new economy, informal education, urban development, and contemporary art into one innovation ecosystem. 30% of operating profit is reinvested into social initiatives for the city and community.
- **Products/Services:** Promprylad is a multifunctional project combining rental business, event management, food-market, hospitality services, and the operation of cultural, educational, and innovation spaces. Office and co-working areas ('work') occupy 36% of the site; culture, education, innovation, R&D and sports ('develop' and 'create') – 23%; hotel and hostel ('live') – 11%; commercial and multifunctional areas ('eat', 'shop', 'entertain') – 30%.

  The project also delivers training programmes for entrepreneurs and veterans, and 30% of the space is offered at subsidised rates for social and development-focused initiatives (education, science, arts, incubation and acceleration programmes).
- **Technological Parameters Of The Project:** The project applies circular economy principles and green construction standards and is already Leadership in Energy and Environmental Design (LEED) certified. It includes material reuse, thermal modernisation to Class A, energy-efficient systems with environmentally friendly heat pumps, and rooftop solar power plants with a total capacity of up to 1.5 MW.
- **Project Strengths:** A unique regional development model with global relevance, combining impact and profit. High-yield commercial real estate (42,000 m²) in a prime central location; 50% already launched, with 88% of the 19,413 m² reconstructed area leased.
- **Target Market:** The project targets businesses and institutions seeking quality working space, retail, and coworking, event and multifunctional spaces in western Ukraine. Over 206 tenant requests (77,000 m²) shaped the architectural concept. Market demand is driven by local shortages and relocation trends caused by the wartime conditions.

BUSINESS MODEL

- 70% of the project is owned by private investors, while 30% is held by an embedded charitable foundation structurally integrated into the project.
- 30% of the project's profit is allocated to an internal development fund that supports social and educational initiatives, ultimately contributing to sustainable value growth and increased capitalisation over time.
- The business model is based on equity crowdfunding, combining commercial leasing, in-house operations (including a food market, hospitality, and coworking), and event services.
- The project is being implemented through a phased redevelopment strategy.

KEY POINTS OF PROJECT IMPLEMENTATION

- **Projects highlights[1], $ mln**

Financing structure: **CAPEX 100%**

Type of financing: **equity, debt**

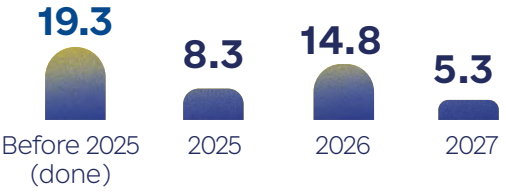

Project Status: Under implementation. The property is 100% owned by the project. The 2-hectare land plot is leased for 49 years. In 2024, the second phase (19,413 m²) was completed and is operational.

The third phase has a finalised concept and construction documentation prepared for approval, with further construction works to follow.

- **Expected Financial Indicators**

NPV **$18.4 mln**	EBITDA (5th year) **$6.0 mln**	Project launch period **2.5 years**
Revenue (5th year) **$10.4 mln**	IRR **17%**	DPP **17.1 years**

INVESTMENTS IN THE PROJECT, $ MLN

KEY PARTNERS

Strategic: Bosch Foundation, EBRD, GIZ, Embassies of the UK, Canada, Sweden, the Netherlands, the USA and others.

Development: DELTA Group, Forma Architectural Studio, Alpha Construction and Metabolic.

Key investors: MacPaw, Nova Poshta, Moris Group, etc.

An investment-purpose loan obtained under the government-backed programme of the Entrepreneurship Development Fund ("Affordable Loans 5-7-9%").

INCENTIVES

The project is part of Ivano-Frankivsk's development strategy (Goal A.2: SME development) and ranks among the top 5 regional development projects in Ukraine under the President's "Ukraine Magnets" programme. Based on a memorandum with the city, it benefits from a 49-year land lease at the lowest possible rate and ongoing reconstruction of adjacent streets.

[1] The project information and financial indicators are provided by company-initiator of the project.

REAL ESTATE, CULTURAL HERITAGE

ROZDIL PALACE LLC. EFI GROUP

LVIV REGION

ROZDIL PALACE: Historical Palace & Cultural Park

- **Brief Description:** ROZDIL PALACE is an international impact project and precedent of revitalisation and functioning of historical palace and park complex on the basis of economical efficiency. It aims to become the largest cultural and tourist destination in Western Ukraine and main location of Rozdil Wonders – the network of regional tourist routes.
- **Products/Services:** ROZDIL PALACE (historical palace and concept wedding zone), Rozdil Hall (premises for conferences, concerts, art exhibitions, gastronomic and cultural events etc.), spaces for tourism, events and leisure.
- **Technological Parameters Of The Project:** Conservation, restoration, reconstruction and construction processes. Energy-efficient renovation using green technologies, digital infrastructure, adaptive spaces.
- **Project Strengths:** A unique historical complex with a palace and park, located near international highways leading to the Carpathian Mountains. An ideal location for the development of tourism, cultural or commercial initiatives.
- **Target Market:** Ukrainian and foreign middle and premium segment guests, cultural tourists, business audience, event participants, art residents, creative community.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 96.2%
OPEX 3.8%

Type of financing:
equity finance, reinvestments, grants

Project Status: Pre-Development / Design Phase. Scientific and historical research has been completed. The buildings (over 6,000 m², private property) have been conserved, the park on a land plot of more than 6.5 hectares (municipal property, rent) has been maintained. Project documentation for the restoration of the palace is currently in progress.

- **Expected Financial Indicators**

NPV
$17.5 mln

EBITDA (6th year)
$0.5 mln

Project launch period
4.5 years

Revenue (6th year)
$2.4 mln

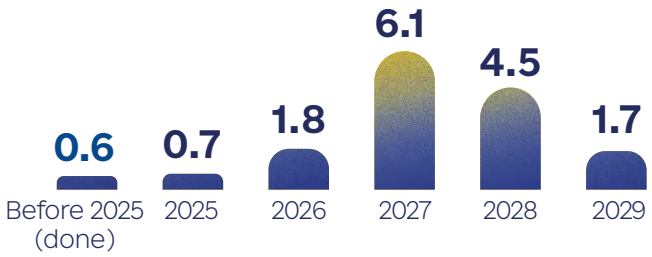

IRR
20.2%

BILA TSERKVA,
KYIV REGION

REAL ESTATE, INDUSTRIAL PARK

INDUSTRIAL PARK BILA TSERKVA 1 LLC ASTROBUILD LLC

INDUSTRIAL PARK BILA TSERKVA

- **Brief Description:** A fully operational, ready-to-build industrial park for both Ukrainian and foreign manufacturers. The project requires diverse types of financing: debt and project finance for the existing industrial park (new industrial facility construction) and project finance for the development of additional industrial parks (economic and technical details are currently being elaborated).
- **Products/Services:** The project offers access to industrial land, full utility connections (electricity, water, sewage, natural gas) and general contractor services for construction of industrial facilities (plants, share houses etc.) within the park.
- **Technological Parameters Of The Project:** Industrial facilities are being constructed using fast turnkey solutions from ASTRON™, a leading EU supplier of steel prefabricated buildings, on a fully functioning industrial site with full utility connections.
- **Project Strengths:** Strategic location: situated 75 kilometres from Kyiv, in Bila Tserkva – the second-largest city in the Kyiv Region. The site is privately owned, fully connected to utilities (electricity, water, sewage, natural gas), and benefits from the involvement of an experienced general contractor as well as both national and local incentives available to industrial park residents.
- **Target Market:** Onshoring of foreign companies targeting the EU market, relocation of EU companies seeking cost optimisation, and enterprises interested in participating in Ukraine's recovery.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 100%

Type of financing:
debt, equity and project finance

Project Status: The project has been under implementation for over eight years on a 70-hectare privately owned land plot.
Stage 1: 35 hectares have already been sold to 14 resident companies, including four foreign enterprises. Over 40,000 m² of industrial facilities have been built or are currently under construction within the park. A total of $50 million in investment has been attracted.

- **Expected Financial Indicators**

NPV	EBITDA (5th year)	Project launch period
$45.0 mln	**$15.0 mln**	**3 years**
Revenue (5th year)	IRR	DPP
$37.0 mln	**15%**	**9 years**

BUSINESS MODEL

- The project involves the development of industrial sites and manufacturing facilities, as well as the sale and lease of land plots within the industrial park, all fully equipped with utility connections (water, sewage, electricity, gas, etc.).
- The project is supported by professional general contractor services, enabling the rapid construction of industrial facilities using modern building technologies.

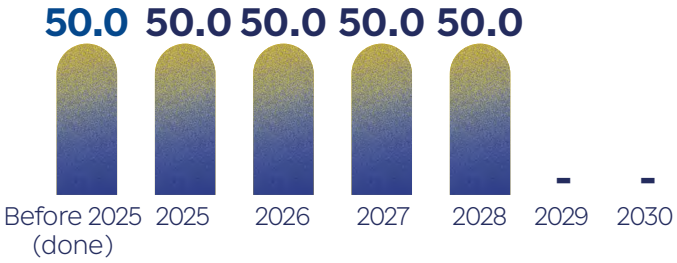

KEY PARTNERS

Among the foreign residents of the park are Unilever Ukraine (UK-USA) and Peikko Group (Finland). Astron Buildings S.A. (Luxembourg) supplies prefabricated metal buildings. Governmental support comes from the Ministry of Economy of Ukraine and the Bila Tserkva local municipality, including infrastructure development grants. Financial partners include Ukrgasbank JSB and FUIB JSC.

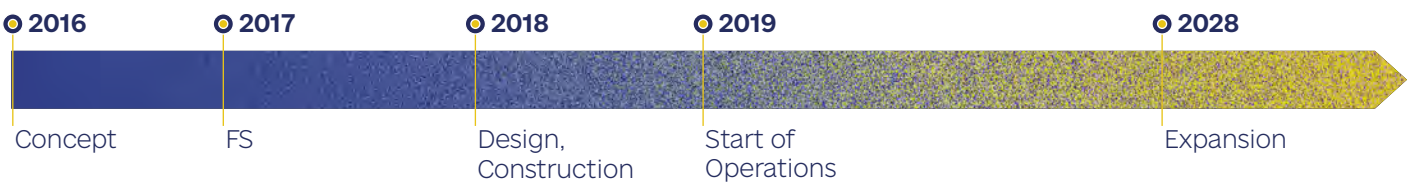

INCENTIVES

Industrial park residents are eligible for government-provided incentives. The local municipality has introduced a 0% industrial land tax rate for resident companies.

INVESTMENTS IN THE PROJECT, $ MLN

KEY POINTS OF PROJECT IMPLEMENTATION

KYIV REGION

REAL ESTATE, INDUSTRIAL PARK

INDUSTRIAL PARK MYROTSKE LLC BUCHA'S AGENCY FOR REGIONAL DEVELOPMENT

INDUSTRIAL PARK BUCHA TECHNO GARDEN

- **Brief Description:** The industrial park BUCHA TECHNO GARDEN is municipally owned and operated by the private company Industrial Park Myrotske LLC. Spanning 65 hectares, the park is designed to align with Ukraine's National Economic Strategy 2030. The project requires equity financing for the development of utility connections, warehouse facilities, and production sites for residents.
- **Products/Services:** Development of logistics infrastructure, production facilities, and healthcare services within specialised industrial clusters.
- **Technological Parameters Of The Project:** The project incorporates green and energy-efficient technologies, modern IT solutions, and cutting-edge infrastructure.
- **Project Strengths:**
  - Strategic location: in close proximity to Kyiv (15 kilometers), in a growing city in the Kyiv Region, Bucha;
  - Strong state support;
  - New job creation.
- **Target Market:** The BUCHA TECHNO GARDEN industrial park partners with companies across all industries that are committed to eco-friendly and zero-emission practices. Top priority is given to producers of construction materials, both local and international.

BUSINESS MODEL

- The industrial park generates revenue through long-term leases and the sale of industrial land and real estate. It offers services to resident companies across logistics, manufacturing, and healthcare clusters.
- The business model supports sustainable growth by attracting diverse industries and fostering innovation.

KEY PARTNERS

Key partners include Antonov Airport, ZIPLINE, Ecosoft, Credit West Bank, UPG, the National Aviation University, Difrano Union LLC (TM Organic), Reinforced Concrete Structures Plant #1, Simple Task Logistics Center for chilled and frozen products, Meat Processing Plant (TM Yakym), and PCT PLUS LLC Logistics Center for construction materials. They provide expertise, technology, financing, logistics, and research support, fostering a collaborative ecosystem for park's development.

INCENTIVES

Residents located in the industrial park are eligible for governmental incentives and municipal tax benefits.

- **Projects highlights[1], $ mln**

Required financing **94.4** | **126.3** Total budget

Financing structure: **CAPEX 90% OPEX 10%**

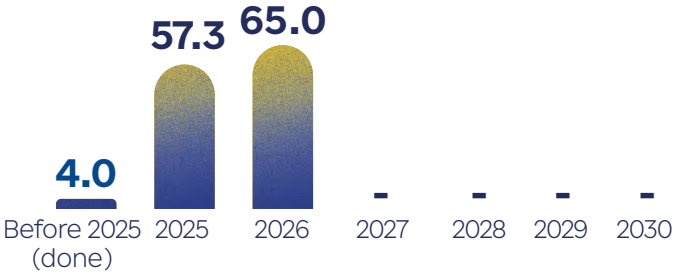

Type of financing: **equity finance, grants**

Project Status: The project is currently at the pre-feasibility study stage, on land owned by the local community. While the industrial park is under development, several plots within its territory are already operational. Specifically, Zipline's medical drone hub and UPG fuel stations are functioning on respective land plots. The National Aviation University is engaged as a research and education partner. Construction permits have been secured for a 35 MW substation and 2 MW of solar panels. The park has also received state funding for infrastructure development.

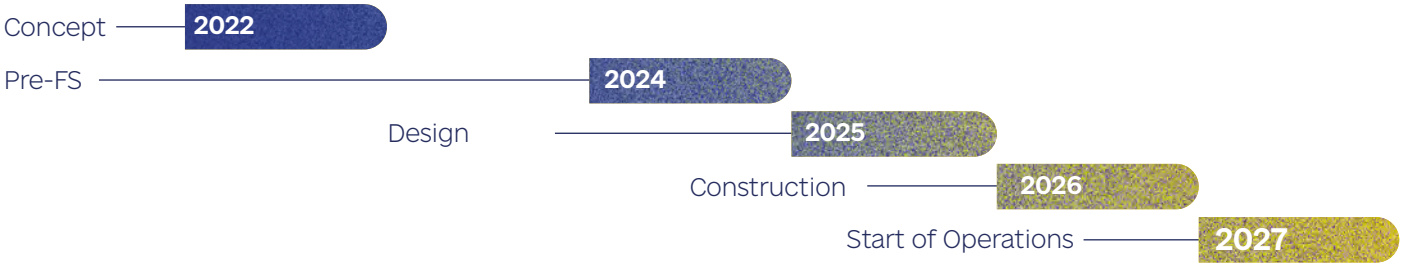

- **Expected Financial Indicators**

«OCEAN PLAZA» LYBID INVESTMENT UNION LLC

Large privatisation

- **Brief Description:** Ocean Plaza is one of the largest shopping and entertainment complexes of Kyiv. In 2021, Ocean Plaza was recognised as the best large shopping center in Ukraine according to the RAU Awards rating.
- **Products/Services:** The mall provides a full suite of services to visitors: shopping, dining, entertainment, and events. Provides high traffic and an efficient tenant mix, which maintains stable rental occupancy and attractiveness for investors.
- **Technological Parameters Of The Project:** A modern multi-level shopping mall featuring advanced climate control, escalators, elevators, and large retail spaces designed for high foot traffic.
- **Project Strengths:** Prime retail location with strong brand recognition; modern facilities and diversified tenant mix ensure steady rental income and long-term growth potential.
- **Target Market:** Urban consumers, shoppers, and tourists in Kyiv seeking retail, dining, and entertainment experiences.

- **Main financial indicators[1], $ mln***

	2021	2024
Assets	67.2	78.1
Equity	0	0
Total income	66.3	29.2
Total costs	48.4	64.1
Net profit (loss)	10.8	-34.8

* According to the average annual exchange rate of the NBU in 2021 and 2024, respectively

Project Status: being prepared

- **Number of employees** (as of 31.12.2024): **6**

Information on assets included in the privatisation object:

Property information (real estate): The total area of the building is 134,627.2 m², the rental area is over 70,000.0 m²

Information about land plots: 1 land plot with a total area of 2.97 hectares.

Ocean Plaza shopping and entertainment center includes: about 300 stores, about 30 restaurants. amusement park, 4K cinema “Cinema City Kyiv”, parking for 1,407 cars, City Beach Club - summer beach complex (it is included in the “Ukrainian Book of Records” for the largest terrace and beach on the roof).

The main conditions for the privatisation of the company:

- Since the stake is subject to large-scale privatisation, its starting price and sale conditions must be approved by the Cabinet of Ministers of Ukraine.
- Currently, the State Property Fund must prepare and submit a coordinated draft of the respective decision for the Government’s consideration.

[1] The project information and financial indicators are provided by company-initiator of the project.

4.11 HEALTHCARE SECTOR

The full-scale war has had a colossal impact on Ukraine's healthcare system. It is estimated that around **16% of all medical facilities** have been completely destroyed, and a **further 48%** have suffered partial damage, significantly hindering Ukrainians' access to medical care, particularly essential services.

Despite these challenges, the healthcare system continues to demonstrate remarkable resilience and adaptability under wartime conditions: damaged infrastructure is being restored, staff are being relocated to alternative premises, and emergency care continues to be provided in frontline areas. The urgent need for the sector to function effectively in these circumstances has driven significant transformations and innovations.

One of the key priorities within the medical sector is **the expansion of existing rehabilitation infrastructure and the development of entirely new facilities**.

As the number of military personnel and civilians with serious injuries continues to rise, so too does the demand for highly effective rehabilitation centres. Thousands of Ukrainians require high-quality prosthetics and long-term physical rehabilitation. New medical institutions are already emerging across Ukraine, incorporating multidisciplinary approaches that include physical, psychological, neurological, and social rehabilitation. Modern equipment – such as exoskeletons, bionic prosthetics, virtual reality systems, and robotic trainers – is being used alongside international treatment protocols. One such example is the UNBROKEN project in Lviv, launched in 2022 as the first National Rehabilitation Centre. It provides comprehensive support to those affected by the war, ranging from reconstructive surgery to advanced prosthetics and psychological assistance.

At the same time, Ukraine is implementing large-scale infrastructure projects under public-private partnership (PPP) arrangements, aimed at modernising and developing new multi-profile hospitals. One such project is the construction of a **new multidisciplinary medical centre in Zhytomyr**. The project envisions the establishment of a modern hospital with a centralised layout of departments, serving both the city's population (over 260,000 residents) and potentially the entire Zhytomyr region (over 1.3 mln people). The hospital will operate around the clock, providing a wide range of services – from therapeutic and surgical care to emergency neonatal treatment. The project involves engaging a private partner under a **DBFM (Design-Build-Finance-Maintain) model**.

260,000
residents

1.3 mln
people potentially

A similar initiative is being implemented in Vinnytsia, where plans are underway to develop a **modern 300-bed multi-profile hospital** to replace the city's outdated network of medical facilities.

modern 300-bed multi-profile hospital

The digital transformation of the healthcare system is also playing a crucial role. The use of eHealth platforms in Ukraine enables the following:

- creation of electronic medical records;
- provision of online consultations for patients who are forcibly residing in areas where physical visits are not possible;
- integration with platforms for issuing electronic prescriptions and digital reporting.

This makes it possible to broaden the reach of healthcare services and extend care to a wider range of patients and regions.

At the same time, the pharmaceutical sector has emerged as one of the most promising industries for investment. Amid reduced access to imported medicines, domestic manufacturers have intensified the development of their own products, raised quality standards, and modernised production facilities:

- In 2023, the domestic pharmaceutical market grew by **12.5%**, reaching almost **$1.5 bn**;
- Retail medicine sales in 2024 reached around **$4.8 bn**, marking a record high;
- Pharmaceutical exports in 2024 exceeded **$227 mln**, showing an increase of over **33%** compared to the pre-war period;
- A number of reforms have been adopted to harmonise with European GMP standards, paving the way for integration with the EU market;

- Leading domestic companies, such as Farmak, Darnytsia, Pharmaceutical Factory VIOLA PrJSC and Biopharma are investing in R&D, production automation, and the expansion of export channels.

Another important area within the healthcare sector is medical entrepreneurship. During wartime, private clinics, laboratories, and diagnostic centres have not only maintained their presence in the market, but also adapted to new challenges - introducing mobile solutions, multifunctional platforms, and personalised medicine.

Thus, despite the unprecedented challenges of wartime, Ukraine's healthcare sector continues to demonstrate resilience and significant potential for dynamic growth. The development of rehabilitation infrastructure, digital medical solutions, and pharmaceutical production is creating new opportunities for strategic partnerships and investment. Harmonisation with European standards, active involvement of the private sector, and support from international donors are laying the foundation for a modern, innovative, and competitive healthcare system.

SWOT-ANALYSIS

Strengths

- **Ukraine's healthcare sector has demonstrated flexibility and adaptability** during both the COVID-19 crisis and the ongoing war, responding swiftly to emerging challenges and maintaining systemic stability despite severe disruptions
- **The Government of Ukraine has made notable progress in integrating national digital platforms** into the healthcare system and has identified digitalisation as a strategic priority
- **The Medical Guarantee Programme**, launched in Ukraine, is being systematically expanded, reflecting the country's shift towards a more people-centred healthcare system
- **Private healthcare providers in Ukraine exhibit a high level of development**, contributing to growing public trust in their services
- **A strong presence of private HealthTech developers** reinforces the healthcare system's efficiency and accessibility
- **Ukraine's pharmaceutical sector demonstrates increasing production capacity** and compliance with EU GMP standards, creating opportunities for export-oriented manufacturing and joint ventures
- **The international community has expressed a long-term commitment** to supporting the reconstruction and modernisation of Ukraine's healthcare sector

Weaknesses

- **Uneven distribution of healthcare personnel, facilities, and pharmacies across Ukraine** limits access to healthcare services in rural areas. The ongoing war has exacerbated this imbalance, with over 16% of public healthcare facilities destroyed or damaged
- **Infrastructure in many public healthcare institutions is outdated**, hindering the implementation of modern diagnostic and treatment methods. Reconstruction needs related to war damage are estimated at €18.7 bn – a figure that continues to grow as the conflict persists
- **Ukraine remains heavily dependent on imports of medical equipment**, despite gradual progress in domestic pharmaceutical production
- **Ukrainian households face substantial health-related risks** due to insufficient government expenditure on the healthcare sector
- **Elderly care services remain underdeveloped** and fail to adequately meet the needs of Ukraine's ageing population

Opportunities

- **An increasing number of public-private partnerships (PPPs)** may enable the government and private sector to pool resources for rebuilding Ukraine's healthcare system
- **International collaboration on establishing local medical equipment production** could reduce Ukraine's dependence on imports
- **Further adoption of telemedicine solutions** – including online consultation platforms, telerehabilitation, telecardiology, and remote patient monitoring – will improve access to healthcare services, particularly in underserved areas
- **Establishment of new rehabilitation centres and training programmes for healthcare personnel** will help meet the growing demand for these services across Ukraine
- **Continued expansion of digital platforms and physical centres for mental health support** may improve care for war-related mental health disorders among the Ukrainian population
- **Development of a comprehensive elderly care network** will address the needs of Ukraine's ageing population more effectively
- **Expansion of export-oriented pharmaceutical manufacturing and biotechnology research** could enhance Ukraine's integration into the European health value chain

Threats

- **The ongoing russian invasion of Ukraine** may cause further damage to healthcare infrastructure and increase the number of injured individuals, putting additional strain on the healthcare system
- **Continued emigration of Ukrainian medical professionals** could undermine the capacity of healthcare institutions to deliver services and limit the population's access to medical care
- **The persistent trend of population ageing** may impose additional burdens on the healthcare system due to a rising prevalence of chronic and age-related diseases
- **Economic fluctuations in Ukraine** may affect the government's ability to finance the healthcare system and sustain the Medical Guarantee Programme
- **Political instability** could shift national strategic priorities, potentially delaying or reducing the priority of the development of the healthcare system
- **Geopolitical uncertainty** may lead to changing priorities among foreign partners, posing risks to the continuity and scale of international support

HEALTHCARE, PHARMACEUTICAL MANUFACTURING

UKRINDUSTRY CONSORTIUM

Development of modern liposomal medicines

- **Brief Description:** Development and market launch of liposomal drug groups.
- **Products/Services:** Modern liposomal medicines.
- **Technological Parameters Of The Project:** The technological platform, supported by modelling and machine learning, enables rapid development and scalable production of high-quality liposomal medicines using standard equipment. This approach ensures standardisation, lowers production costs, and improves patient access.
- **Project Strengths:** The project addresses one of the key challenges in modern medicine - targeted drug delivery - by developing advanced liposomal formulations.
- **Target Market:** The project is intended for export to external markets and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Type of financing: **equity financing**

Project Status: The conceptualisation phase of the project is complete. Research has been conducted and patents have been obtained.

- **Expected Financial Indicators**

NPV **$1.2 mln**	EBITDA (5th year) **$0.5 mln**	Project launch period **3 years**
Revenue (5th year) **$2.2 mln**	IRR **23%**	DPP **7 years**

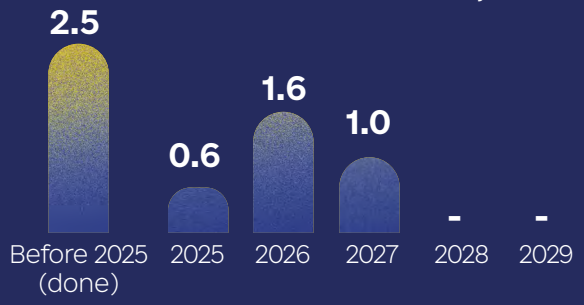

BUSINESS MODEL

- Planned products include a line of ophthalmic liposomal medicines (e.g. Lipoflavon II, cytochrome C, latanoprost), Lipoxid - an innovative cardiology drug based on a patented hybrid API, and pulmonology formulations for lung recovery after severe respiratory illnesses.

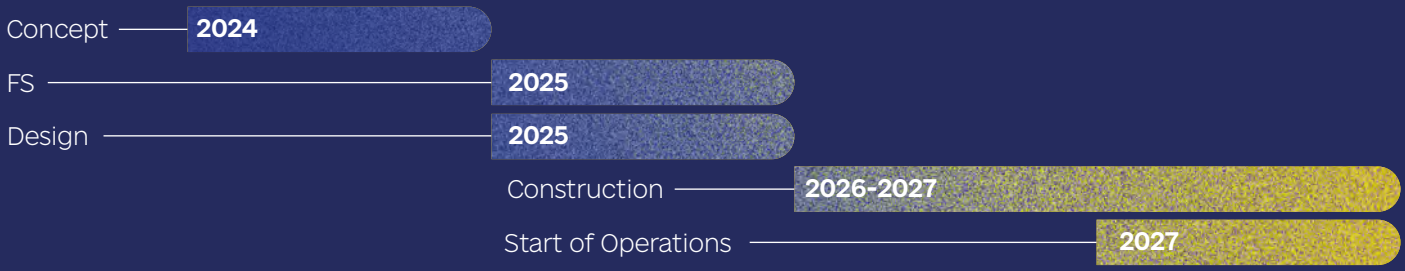

INCENTIVES

Strong social component - support for government programs, with the potential to attract grants and preferential financing.

PHARMACEUTICAL FACTORY VIOLA PrJSC

An innovative hub for the production of solid dosage forms

- **Brief Description:** Construction and equipping of a solid pharmaceutical manufacturing facility for medicines not yet registered in Ukraine or nearing patent expiry, but registered and in high demand in modern European countries.
- **Products/Services:** Pharmaceutical solid dosage forms, specifically ones whose patents are expiring and which are not registered yet in Ukraine and are registered in EU countries and are in wide demand.
- **Technological Parameters Of The Project:** Compliance with Good Manufacturing Practice. Quality and safety are ensured through in-house certified laboratories that control raw materials, intermediates, and finished products.
- **Project Strengths:** The medicines intended for production by the company are already registered in European countries and enjoy strong demand among patients.
- **Target Market:** The project is intended for export to external markets and supply to the Ukrainian market.

- **Projects highlights[1], $ mln**

Financing structure:
CAPEX 70%
OPEX 30%

Type of financing:
debt financing, equity financing, project financing

Project Status: Stands at the implementation stage.

ROCHE UKRAINE LLC

Advanced AI-powered cancer diagnostics for Ukrainian patients

- **Brief Description:** A comprehensive initiative to transform cancer diagnostics in Ukraine through automation, standardisation, and artificial intelligence integration, enhancing early detection and enabling personalised cancer therapies using Roche Diagnostics technologies.
- **Products/Services:** Routine biochemical tumour marker testing; automated histopathology including H&E staining (Ventana HE600); automated IHC and ISH (Ventana Benchmark Ultra Plus); digital pathology with AI integration (Ventana DP600 scanners, NAVIFY Digital Pathology); PCR-based mutation detection (cobas 5800, cobas PRIME); next-generation sequencing (NGS) (Illumina NextSeq 550 Dx); comprehensive genomic profiling (CGP) (AVENIO Edge Instrument, Illumina NovaSeq 6000).
- **Technological Parameters Of The Project:** Deployment of automated laboratory equipment and AI-driven digital diagnostic platforms from Roche Diagnostics, complying with international standards (CE-IVD, FDA), ensuring diagnostic quality comparable to leading global oncology centers.
- **Project Strengths:** Integration of diagnostic and therapeutic innovations; High automation reducing human error and variability; Scalable nationwide through digital pathology and telemedicine; Collaboration with leading digital healthcare platforms; Alignment with international diagnostic benchmarks (EU/US).
- **Target Market:** Ukrainian healthcare system (public and private oncology centers), with a focus on millions of citizens requiring reliable, high-quality cancer diagnostics and personalised care.

BUSINESS MODEL

- Leasing model for diagnostic equipment provided by Roche Diagnostics, with ongoing operational costs covered by reagent purchases and service agreements.
- Sustainable through regular revenue from testing services and government/private reimbursements.

INCENTIVES

Eligible for international healthcare grants and preferential financing;

Government support and alignment with national health strategies;

Strong social impact improving public health outcomes and reducing long-term cancer treatment costs.

PPP project.
New multidisciplinary hospital in Zhytomyr

- **Brief Description:** Zhytomyr City Council is interested in building a new consolidated multidisciplinary hospital for the needs of the entire community. It should be a hospital for the diagnosis and treatment of a wide range of diseases with a centralised location of departments.
- **Products/Services:** The hospital will serve the population of Zhytomyr city (full coverage; 261,600 city residents) and Zhytomyr oblast (1,667 settlements could potentially be covered; approximately 1,337,719 people).
- **Technological Parameters Of The Project:** The hospital will: offer a wide spectrum of healthcare services, encompassing surgical, therapeutic, and outpatient care; cater patients in both scheduled and urgent settings, operating 24/7; admit patients requiring childbirth, stroke, or heart attack treatment, as well as handle neonatal cases during emergencies; provide treatment for patients with multiple traumas and communicable diseases; provide pediatric care in separate departments, tailored to the specific type of healthcare facility.
- **Technologies and Innovations:** The Project will provide for the technologically efficient construction of sustainable infrastructure that is resistant to climate change (using energy-efficient solutions and innovations).
- **Unique Selling Proposition:** The Project involves using the experience of specialised companies to implement project solutions based on advanced practices of functional and spatial planning of healthcare facilities. Availability payments from the public partner cover all costs of the private partner for the implementation of the Project, as well as the expected return on investment.

- **Projects highlights[1], $ mln**

Type of financing:
PPP project

Financing structure:
Initial CAPEX are financed by a private partner through equity and debt capital and donor's funds (approximately 60%).

Project Status: The project was identified and selected with the support of the International Finance Corporation (IFC) as a strategic advisor to the Government of Ukraine. Cooperation with IFC includes the involvement of consultants (advisors) to conduct a preliminary project assessment. In October 2023, a preliminary assessment of the project began As of May 2025, the Concept Note and the Feasibility Study have been prepared.

KEY PARTNERS

The project was identified and selected as one of the priority PPP projects in the healthcare sector in 2023 in cooperation with the Zhytomyr City Council, the Ministry of Health of Ukraine (MoH) and in pursuance of the Memorandum of Understanding between the Government of Ukraine and the International Finance Corporation (IFC).

BUSINESS MODEL

- The PPP model - "DBFM without services" or an Availability-based PPP Model - provides for the involvement of a private partner to finance, design, construct, equip, and subsequently maintain the buildings, facilities of the new consolidated hospital during the term of the PPP agreement by the output specifications of the new hospital building and equipment and key performance indicators (KPIs) established by the Zhytomyr City Council (City).
- Medical services are not included in the Project (all basic medical services are provided by municipal medical service providers and their employees).
- The source of reimbursement of the private partner's investment, as well as the source of financing the maintenance costs (including the renewal of medical equipment) of the PPP facility will be availability payments.

KEY POINTS OF PROJECT IMPLEMENTATION

2025

The tender to select a private partner is planned to be held in **end of 2025**.

NEXT YEARS

The contract term was established as **18 years**:
the construction period (3 years) and
the maintenance period (15 years).

NEW PPP HOSPITAL BUILDING

300 total beds

PER YEAR:
- 20,000 inpatients
- 300,000 outpatients

- Total build-up area: 27,540m2
- 90m2/bed
- Specialised medical and diagnostics equipment currently not available

[1] The project information and financial indicators are provided by company-initiator of the project.

VINNYTSIA REGION

HEALTHCARE

VINNYTSIA CITY COUNCIL

PPP project.
New multidisciplinary hospital in Vinnytsia

- **Brief Description:** To improve healthcare services to its residents, Vinnytsia City wishes to reorganise the municipal hospitals network and consolidate existing outdated inefficient healthcare facilities into a green-field modern multi-profile hospital on 300 beds. The City would like to attract a private operator to finance, design, construct, equip and maintain the new hospital under a public-private partnership (PPP) model.
- **Products/Services:** The hospital will serve the majority of the population of Vinnytsia city (approximately 400,000 residents) and will also be accessible to the wider Vinnytsia region (1.6 million people as of 2024).
- **Technological Parameters Of The Project:** The hospital will: offer a wide spectrum of healthcare services, encompassing surgical, therapeutic, and outpatient care; cater patients in both scheduled and urgent settings, operating 24/7; admit patients requiring childbirth, stroke, or heart attack treatment, as well as handle neonatal cases during emergencies; provide treatment for patients with multiple traumas and communicable diseases; provide pediatric care in separate departments, tailored to the specific type of healthcare facility.
- **Technologies and Innovations:** The Project will provide for the technologically efficient construction of sustainable infrastructure that is resistant to climate change (using energy-efficient solutions and innovations).
- **Unique Selling Proposition:** The Project involves using the experience of specialised companies to implement project solutions based on advanced practices of functional and spatial planning of healthcare facilities. Availability payments from the public partner cover all costs of the private partner for the implementation of the Project, as well as the expected return on investment.

KYIV REGION

HEALTHCARE, NUCLEAR MEDICINE

UKRAINIAN STATE INDUSTRIAL ENTERPRISE IZOTOP SE

Establishment of a Cyclotron Centre

- **Brief Description:** Construction of a facility for a cyclotron center, procurement of equipment, and construction of Quality Control, radiochemical and target restoration laboratories.
- **Products/Services:** A Cyclotron Centre for the domestic production of radiopharmaceuticals, including medical isotopes (Cu-64, Ga-68, Zr-89, I-124, Tc-99m, etc.) for cancer diagnosis and treatment. The Centre will manufacture isotopes and radiopharmaceuticals for scientific research, clinical use in healthcare institutions, and applications in industrial organisations - meeting the diverse needs of Ukraine's medical, scientific, and industrial sectors.
- **Technological Parameters Of The Project:** The stablished industrial center for production of radiopharmaceuticals at the premises of USIE IZOTOP with the proper capacity to generate the priority radioactive isotopes: Cu-64, Ga-68, Zr-89, I-124, Tc-99m, Ge-68, I-123, Tl-201, In111, Pd-103, Cu-67.
- **Project Strengths:** First facility in Ukraine for domestic isotope production, reducing import reliance. Uses advanced technology and best practices. Provides a secure, reliable supply even during crises. Supports national healthcare and security priorities.
- **Target Market:** Ukrainian healthcare institutions, oncology clinics, research organisations, and hospitals requiring radiopharmaceuticals for diagnostics and therapy. Potential expansion to regional markets in Eastern Europe facing similar supply shortages.

- **Projects highlights[1], $ mln**

Required financing **56.0** **56.0** Total budget

Financing structure:
CAPEX 90%
OPEX 10%

Type of financing:
debt financing, project finance, grant funding

Project Status: The Feasibility Study is currently under development.

The facility includes a 6-hectare land plot featuring a USIE IZOTOP Production Complex located at a distance from residential areas, ensuring a high level of safety and compliance with regulatory requirements. The site is strategically positioned near an international airport and major railway lines, enabling efficient logistics for shipments.

- **Expected Financial Indicators**

NPV **$2.9 mln**	EBITDA **$9.0mln**	Project launch period **5 years**
Revenue **$14.0 mln**	IRR **7.3%**	DPP **9 years**

BUSINESS MODEL

- A production-and-supply model: the Cyclotron Centre manufactures radiopharmaceuticals and medical isotopes and sells them directly to Ukrainian hospitals, clinics, and research institutions.
- The model relies on partnerships with equipment suppliers, support from international organisations, and cooperation with national healthcare providers.

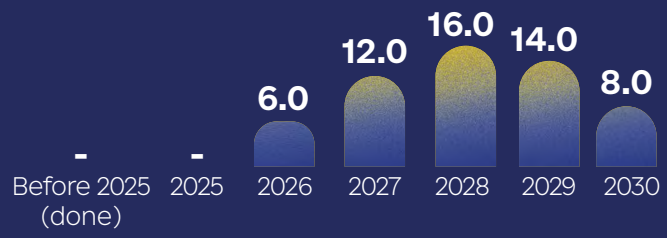

KEY PARTNERS

Organisations: IAEA, IFC, EBRD, EU programs and Global Partnership (NRSWG);

Government agencies and potential international donors (financing, co-funding, support);

Training and technical support partners (for personnel development and operational sustainability).

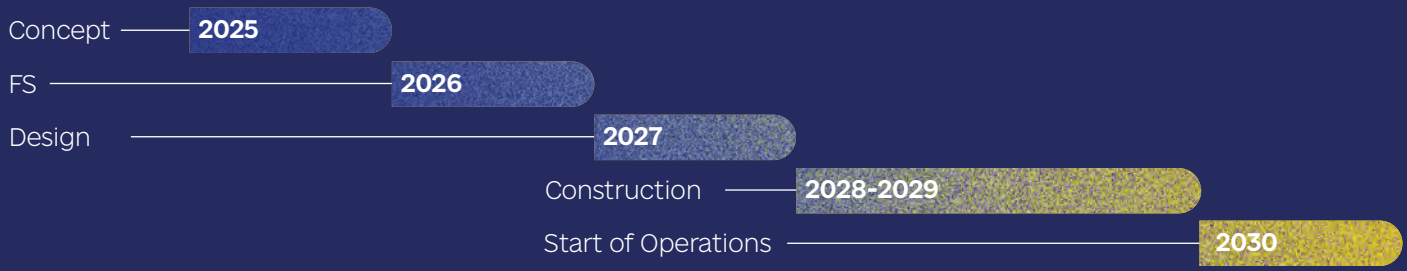

INVESTMENTS IN THE PROJECT, $ MLN

INCENTIVES

The project may be eligible for governmental and donor incentives related to the development of the healthcare and nuclear medicine sectors, import substitution of critical radiopharmaceuticals, and support for scientific localisation.

KEY POINTS OF PROJECT IMPLEMENTATION

[1] The project information and financial indicators are provided by company-initiator of the project.

4.12 PRIVATE EQUITY

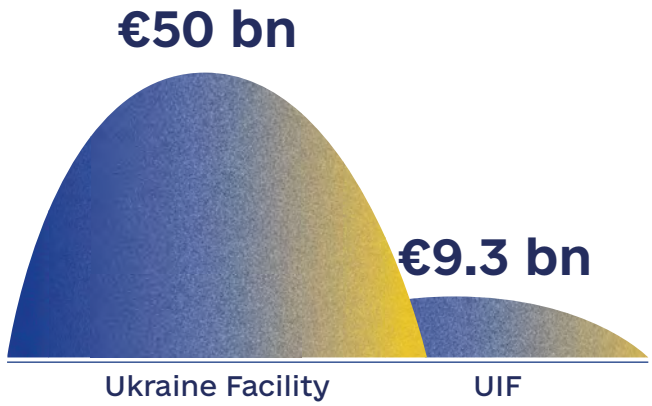

Ukraine's private equity (PE) and venture capital (VC) market remains underdeveloped by regional standards, with an **estimated total market size of $2–3 bn** in assets under management and a limited number of active institutional fund managers. Historically, **Horizon Capital** and **Dragon Capital** have been the only domestic PE firms to successfully raise multiple funds over the past decade – both of which are currently raising additional capital.

Alongside these established players, a growing number of **first-time Ukraine-focused PE and VC funds** are actively fundraising. Some have already secured anchor commitments from IFIs/DFIs and international investors, with initial closings expected already in 2025. This expansion marks a significant increase in market capacity and reflects rising international confidence in Ukraine's recovery and long-term investment potential.

Although still modest in size and still emerging, **Ukraine's PE market presents substantial growth potential**. The intersection of post-war reconstruction needs, EU accession momentum, and structural reform offers a compelling opportunity for equity investors. There is a growing recognition that Ukraine offers meaningful long-term upside as it rebuilds and modernises in alignment with European standards.

Access to patient, risk-tolerant equity capital is vital for Ukraine's private sector – particularly for mid-sized companies, SMEs, and innovation-driven businesses that are underserved by commercial lending and traditional capital markets. IFIs and banks often fall short in addressing the capital needs of growth-stage firms, especially under elevated wartime risks. PE fills this gap by offering long-term capital and strategic support across high-impact sectors such as **technology**, **logistics**, **agrifood**, **manufacturing**, **real estate**, **energy**, **and other**. Importantly, PE investors are equipped to tolerate higher risk and provide flexible structures that enable companies to expand and innovate – even amid instability. In Ukraine's context, private equity is not only a complement to public funding and aid, but also essential to enabling a resilient and modern recovery.

To accelerate investment activity, the Government of Ukraine and its international partners have introduced targeted financial instruments. A flagship initiative is the **€9.3 bn UIF**, a core component of the EU's **€50 bn Ukraine Facility**.

The UIF provides guarantees, blended finance, and technical assistance specifically designed to de-risk DFI and IFI capital and crowd in private investment – including through private equity vehicles. As part of these efforts, a **Ukraine-dedicated equity fund** is being developed to act as a cornerstone investor alongside local general partners, helping to mobilise additional capital from European and global institutional investors and accelerate the growth of Ukraine's PE ecosystem.

In parallel, Ukraine is making tangible progress in reducing investor risks. War-risk insurance mechanisms are being established with support from **MIGA**, **DFC**, G7 governments, and global reinsurers.

The government is also working closely with IFIs to improve investor dialogue, legal protections, and contract enforcement – complemented by broader governance reforms aligned with EU accession goals. These efforts are steadily improving the investment climate for PE, laying the foundation for long-term institutional capital participation.

Looking forward, **private equity is expected to play a transformative role in Ukraine's economic renewal**. As reconstruction accelerates, PE offers a strategic tool to finance innovation, modernisation, and competitiveness.

With the right mix of policy support, risk-mitigation tools, and a growing fund manager base, Ukraine's private equity market is well positioned to emerge as a cornerstone of long-term recovery – unlocking entrepreneurial potential and driving sustainable, European-aligned growth.

PRIVATE EQUITY

Highlighted investment funds

HORIZON CAPITAL CATALYST FUND SCSP (CATALYST FUND)

BRIEF DESCRIPTION OF THE FUND

Catalyst Fund, a mid-cap growth equity fund, has been established to address the critical equity capital shortage in Ukraine for strategic sectors since the onset of the full-fledged invasion.

Its aim is to unite investors standing with Ukraine now, not when the war is over, bringing together **€300 mln ($350 mln)** to mobilize **€3.5 bn ($3.5 bn)** in capital – a **10x multiplier effect** - for asset-heavy domestic-oriented companies and projects across a variety of investment themes.

Catalyst Fund will invest alongside primarily European strategics and funds seeking to join forces with Horizon Capital as a reputable minority partner with strong in-country presence, local knowledge and network to accelerate their market entry to Ukraine, and/or alongside Ukrainian founders/operators seeking to partner with Horizon Capital to access catalytic equity capital and significant value-add expertise.

It intends to replicate the success of Horizon Capital's Datagroup-Volia-Lifecell telecom transaction, attracting a major European strategic to Ukraine during wartime in December 2024, while achieving a **30x multiplier effect** on equity invested by Horizon Capital. Catalyst Fund intends to deliver returns, impact, and co-financing opportunities for its investors at both the fund and transaction levels.

SIZE OF THE FUND

€300 mln ($347 mln)

GEOGRAPHIC FOCUS

Ukraine

INDUSTRY/SECTOR

Asset-heavy, domestic companies and projects operating in Ukraine's digital infrastructure, energy, construction materials, and other industrial sectors with secular growth drivers or unique recovery potential.

STATUS

Launched fundraising in June 2025, various investors at evaluation and appraisal stage; targeting 4Q 2025 first closing.

INVESTMENT MANAGER TRACK-RECORD

Operating via a proprietary Kyiv-based platform and with **over 30 years** of on-the-ground experience in Ukraine, Horizon Capital is the leading private equity firm in Ukraine with more than **$1.6bn in assets** under management, catalyzing over **$3bn in total capital** primarily to Ukraine, and backed by institutional investors with over **$700bn in capital**.

The firm is comprised of a Kyiv-based experienced team of investment professionals with established private equity, corporate finance, consulting and operational improvement experience, as well as dedicated sectoral experience at leading industrial and energy companies in Ukraine, whose track record includes (i) **raising $350m HCGF IV**, the first and largest fund for Ukraine since the onset of the russian 2022 full-scale invasion, **exceeding original target by $100m**; (ii) catalyzing **the largest investment in Ukraine of the last decade** – a telecom sector acquisition by Xavier Niel, European tech visionary, with co-financing of **$435m provided by EBRD and IFC**, backed by the Ukraine Investment Framework; and, (iii) establishing a strong liquidity track record with distributions to investors of **over $900 million since 2012**.

STRATEGY

Catalyst Fund will act as a dealmaker-consortium operator, enabling Horizon Capital to extend its winning strategy to back mid-cap asset-heavy domestic businesses partnering with primarily European and Ukrainian strategics-operators in sectors of interest to such lead investors. Catalyst Fund is designed to complement - not compete with - infrastructure and real asset buyout funds being raised for Ukraine. Catalyst Fund intends to be a minority value-add growth equity partner to local and international operators with deep sectoral knowledge, benefiting from Ukraine's anticipated accession to the European Union over the fund term, contributing an in-depth knowledge of Ukraine's investment and regulatory environment, attracting co-financing and supporting expansion and growth.

AMBER DRAGON UKRAINE INFRASTRUCTURE FUND

BRIEF DESCRIPTION OF THE FUND

A commercial investment strategy focused on greenfield infrastructure projects in Ukraine.

The strategy will provide access to a significant pipeline of critical infrastructure, including those investable before the end of the war, focused on the **energy**, **digital** and **transport sectors**.

The strategy will play an important role in the delivery of quality services to the country, **long-term value creation** and further post-war reconstruction efforts.

SIZE OF THE FUND

€350 mln ($404 mln)

GEOGRAPHIC FOCUS

100% Ukraine

INDUSTRY/SECTOR

Energy, Transport and Digital Infrastructure.

STATUS

Progressed appraisal processes with several IFIs as well as a number of national DFIs.

INVESTMENT MANAGER TRACK-RECORD

Joint venture which combines Dragon Capital's on-the-ground experience and presence in Ukraine with Amber Infrastructure's track record of infrastructure investment including in the neighbouring Central and Eastern European region.

About Amber Infrastructure: Amber Infrastructure is a specialist international investment manager with **c.€16.8 bn funds under management**, **c.180 investment professionals** and **15+ years experience across three continents**. Amber has an extensive track record in the CEE region having deployed **~€850m into infrastructure investments**.

About Dragon Capital: Dragon Capital is a Ukrainian based manager with experience in the real estate and private equity sectors, having successfully deployed **over €700m** in various projects in Ukraine **over the last 10 years**. Dragon have been **active in the market since 2001** and has the largest team on the ground with almost **200 local and international experts**.

STRATEGY

The fund will focus on **greenfield**, **utility-scale energy projects** aimed at replacing heavily damaged and technologically outdated power generation facilities with new renewable energy capacities, as well as system-balancing infrastructure to ensure a reliable and clean energy supply for the Ukrainian economy.

In the digital infrastructure space, the fund will focus on distributed telecommunications assets such as **telecom towers**, **fiber networks**, and **data centers**, supporting the growth of the country's digital economy.

In the transport sector, the fund will target **logistics centers**, **ports**, and privately owned **rail infrastructure assets**.

The strategy will seek investments in controlling stakes or co-investments with like-minded investors, with an average ticket size ranging from **€ 20 to 50 million**.

REBUILD UKRAINE FUND (REBUF)

BRIEF DESCRIPTION OF THE FUND

REBUF is a **generalist private equity fund** focused on post-war-shock recovery and the growth of sound Ukrainian SMEs. **Launched by Dragon Capital**, the Fund aims to unlock substantial upside by financing and institutionalizing resilient local businesses—helping them recover operations, scale, and attract strategic international investors.

The Fund is also positioned to benefit from Ukraine's anticipated accession to the European Union, which is expected to drive structural reforms, open new markets, and significantly enhance the investment climate. By entering early, REBUF aims to capture long-term upside from deeper EU integration and accelerated economic convergence with Western Europe.

REBUF's **mission is to help Ukraine emerge from war with a modernized, transparent, free-market economy positioned for EU accession**. The Fund targets a market segment highly underserved by I/DFIs and other investors—local SMEs—which represent over 75% of the national workforce and 60% of revenues but suffer from a critical equity capital gap. By deploying fresh capital alongside strategic, operational, and governance improvements, **REBUF seeks to build a more bankable and investable Ukrainian private sector**.

SIZE OF THE FUND
$200-250 mln

GEOGRAPHIC FOCUS
Ukraine

INDUSTRY/SECTOR

Generalist with special interest in consumer goods and services, healthcare, pharma, financial, agriculture-related, construction materials, retail, and tech.

STATUS

Progressed appraisal processes with several IFIs as well as a number of national DFIs, **targeting 3Q 2025 first closing.**

INVESTMENT MANAGER TRACK-RECORD

Dragon Capital is Ukraine's **major investment firm and a seasoned private equity investor with a track record dating back to 2001**. Over the past two decades, the firm has **invested more than $1.2 billion across two private equity funds**, principal investments, a range of co-investment vehicles and real estate funds in partnership with top-tier global investors, international financial institutions (IFIs), and development finance institutions (DFIs). Dragon Capital's **senior leadership team has worked together for over 17 years**, offering unmatched continuity, deep local insight, and institutional fund management expertise. The firm has **one of the largest and most experienced investment teams** on the ground in Kyiv.

STRATEGY

REBUF will act as a **transformational investor**, **addressing urgent equity shortages** and **catalysing recovery** among Ukrainian SMEs and larger businesses **through direct equity** and **flexible capital structures**. The Fund will seek majority or joint control positions in high-potential businesses with strong teams, market leadership, and readiness to institutionalize.

Investments will focus on helping local champions to cope with challenges created by war and realize their full potential. REBUF will also **aim to promote a more competitive and transparent business environment in Ukraine** by offering independent, growth-oriented capital to companies.

By investing before the war ends—when capital is most needed—REBUF targets outsized returns while maximizing economic and societal impact.

TARGET TICKET SIZE

GREEN RECOVERY FUND

BRIEF DESCRIPTION OF THE FUND

Green Recovery Fund (GRF) is a private equity fund, **established in 2021 by SD Capital** with the joint efforts of well-established local and international industry leaders, with extensive experience in private equity, energy and logistics infra markets.

The Fund focuses on rebuilding Ukraine by strengthening its **energy independence**, **resilience**, and **real sector development**.

GRF aims to empower Ukraine's future by investing in renewable energy and green logistics to drive sustainable growth and maximize returns through strategic partnerships, co-financing, and effective risk management.

SIZE OF THE FUND

€150 mln ($173 mln)

INDUSTRY/SECTOR

Renewable energy, logistics infrastructure.

STATUS

As SD Capital Family Fund – **over $1bn of assets under management**, mainly in infrastructure, logistics and maritime. **4 successful exits to international strategic investors**.

INVESTMENT MANAGER TRACK-RECORD

GRF team has been working together to build an effective decision-making process. This operational cohesion enables rapid execution and allows the Fund to capitalize on emerging opportunities.

The team brings decades of experience with IFIs and a strong track record of building strategic partnerships. Yuri Kubrushko has been advising IFIs on Ukrainian energy projects for over 25 years, including **recent work on the $347 mln (€300 mln) Electricity Price Guarantee Fund**. Michael Merkulov was a **long-time client of the EBRD**, while Konstantin Magaletskyi worked extensively with IFIs through his experience in private equity investments and successful exits.

The GRF founders have a strong track record of managing infrastructure projects. SD Capital has successfully exited from **TIS Container Terminal**, **Neptune Grain Terminal** and **P&O Maritime**. In 2025, SD Capital also completed a strategic exit from **N`UNIT**, Ukraine's largest intermodal terminal network, through a **sale to Medlog (MSC Group)**.

GEOGRAPHIC FOCUS

West of Ukraine and Kyiv region

STRATEGY

The Fund's strategy is closely **aligned with Ukraine's Recovery Plan**, focusing on **investments in decentralized energy** and **logistics infrastructure** to promote energy independence, resilience, and long-term sustainable growth. It supports the urgent reconstruction and modernization of energy sector through renewable energy generation, storage solutions, and biofuel development, fully in line with the European Green Deal and Ukraine's newly approved National Energy and Climate Plan. By prioritizing decentralized systems, the Fund **helps reduce vulnerability to attacks** and **ensures uninterrupted economic activity**. On the logistics side, the Fund **supports the development of critical infrastructure** such as multimodal terminals, industrial parks, and warehouses to strengthen supply chain resilience and enhance integration with EU markets. This aligns with Ukraine's focus on logistics de-bottlenecking and the diversification of trade routes.

STATUS

$100 mln - DCP Direct Investments Fund I SCS (Luxembourg):

- Vintage - 2018
- Portfolio of private equity investments in Ukraine in agribusiness value chain and technology
- Backed by DFI institutional LPs and more than 20 family offices in Ukraine and globally

INVESTMENT MANAGER TRACK-RECORD

Diligent Capital team brings a deep, hands-on and proven joint track record and experience from across Ukraine and the Black Sea region. We have led or supported **more than 50 private equity investment deals**. With **over 25 years** of working in food and agriculture and other sectors, and a history of **serving on 30+ corporate boards**, we've built strong partnerships that give us access to uniquely promising investment opportunities and a clear understanding of what it takes to grow successful businesses in this part of the world.

GEOGRAPHIC FOCUS

Core markets of Ukraine & Moldova cross-border opportunities tied to core markets

STRATEGY

We **focus on Ukraine and the broader Black Sea region** — a vital and rapidly growing hub for global food and agriculture, exporting over $140 billion each year and playing a key role in feeding the world.

We're **passionate about agribusiness** — investing across the entire agrifood value chain and supporting the people, ideas, and infrastructure that help it thrive. Our **secondary focus is on technology & other export-oriented sectors**; we are opportunistic with regard to other high impact Ukrainian opportunities.

We back ambitious mid-sized and growing companies that generate strong cash flow — businesses led by visionary founders and driven teams, with proven models and real potential to grow and make a lasting impact.
